

Japan Chemicals: CCL trade data: Aug export value up 30% YoY but down 24% MoM; Potential softening in BT substrate demand

According to Japan's Ministry of Finance trade statistics, August 2026 CCL exports by volume (weight basis) declined 2% YoY, while export value increased 30% YoY. Although part of the weakness likely reflects a pullback after July export value surged to a record high, August export value fell 24% MoM, leaving a somewhat softer-than-expected impression. By application, demand for ABF substrates, particularly for GPUs, ASICs, and CPUs, appears to have remained robust, while demand for BT substrates may have stayed relatively subdued. Among related companies, we believe investors should closely monitor Mitsubishi Gas Chemical's performance in 2H, whereas Resonac is likely continuing to benefit from strong demand for ABF substrate materials.

CCL export volume in August 2026 declined 2% YoY and 15% MoM. Export value rose 30% YoY but fell sharply by 24% MoM. While July export value had been exceptionally strong, increasing 20% MoM and reaching a record-high level, the magnitude of the August decline appears somewhat weak even after accounting for normal monthly volatility.

With export volumes largely flat YoY but export value up 30%, we believe ASPs continued to benefit from a favorable product mix and previous price hikes. However, from July to August, export value declined more steeply than volume, suggesting that the product mix, particularly the contribution from higher-value-added products, may also have deteriorated on a sequential basis.

By end application, we estimate that CCL demand for BT substrates was relatively soft. In particular, smartphone-related demand may be showing signs of peaking after a period of strength, as rising memory prices have increased device costs and could be starting to weigh on end-market demand.

Given Mitsubishi Gas Chemical's high market share in BT materials for semiconductor package substrates, investors should closely monitor whether the August weakness signals a broader slowdown in BT substrate demand and, by extension, the company's volume growth trajectory in 2H.

For Resonac, which is more exposed to ABF substrate materials, the trade statistics provide only a limited view of underlying demand trends. A significant portion of its shipments, including those from the Shimodate plant to a major Japanese package substrate manufacturer and from its Taiwan operations to leading Taiwanese substrate makers, are not captured in these export figures. That said, based on our channel checks ([report](#)), demand remains very strong not only for AI server GPUs

Price Target Risks and Methodology – Mitsubishi Gas Chemical

We are Neutral rated on Mitsubishi Gas Chemical with a 12-month target price of ¥4,700. Our target price is based on the materials sector EV/GCI and FY3/28E CROCI/WACC correlation (sector cash-return multiple of 0.75X, applying a 15% discount to the sector average).

Key risks: Upside/downside risks include the semiconductor materials market demand outlook, methanol pricing environment, and forex swings.

Price Target Risks and Methodology – Resonac

We are Buy rated on Resonac with a 12-month target price of ¥25,060. Our target price is based on the correlation between the materials sector's EV/GCI and the FY12/27E CROCI/WACC (cash-return multiple of 0.7X plus a 30% premium to the sector average). Key risks include a slowdown in semiconductor demand, yen appreciation, and decline in graphite electrode earnings.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DAFCF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock’s total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region’s Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts’ investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at <https://www.gs.com/research/hedge.html>.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs’ involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that

has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.
