

AMERICAS UTILITIES: POWER

Inside Customer Affordability: An Introduction to the Electric Utility Bill

With this report, we introduce our Affordability series, where we will lay out key topics impacting utility bill affordability across different parts of the US. Over the last year, utility bill affordability has transitioned from a regional concern to a central regulatory issue across the power/utility sector as a number of factors — including data centers, utility investment levels, and wildfires — have made headlines around utility bill increases. In this report, we aim to provide an introduction to the residential electric bill including: what it comprises, how those factors are determined and how they move, and how bills may differ across different states. From our analysis, we see the most prominent affordability impact to **PJM** customers where capacity prices have reflected the tightening supply and demand in the market, with plant retirements and expectations for rising power demand. We also refresh our analysis on the outlook for utility bill inflation, which we forecast at **3.7%** on average through 2029. Finally, we highlight the companies, based on their geographic exposure, that we believe are best positioned or in a more challenging position to navigate these headwinds.

Goldman Sachs does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. For Reg AC certification and other important disclosures, see the Disclosure Appendix, or go to www.gs.com/research/hedge.html. Analysts employed by non-US affiliates are not registered/qualified as research analysts with FINRA in the U.S.

PM Summary

The typical electric bill consists of three primary components: supply charges, delivery charges and other customer charges. In short, this covers the cost to generate power, deliver it to the end customer, maintain the grid, and (in some cases) implement state policy goals. Supply charges are primarily driven by natural gas prices, wholesale power costs and capacity markets; delivery charges reflect transmission and distribution investments; while other charges include taxes, public benefit programs, low-income assistance, clean energy mandates and wildfire-related costs. As a result, customer bill increases can stem from commodity costs, infrastructure investment, public policy programs, or a combination of all three.

Exhibit 1: The customer bill is made up of three main components: supply, delivery, and a flat customer charge

PJM customer bill example

Date	x/x/xxxx
Usage (kWh)	500
Customer charge	\$5.00
Basic Generation Service	\$125.00
Delivery Service Charge	\$35.00
Total payment	\$165.00

Source: Goldman Sachs Global Investment Research

The drivers of affordability vary by market structure. In regulated markets, regulators set the price charged to customers, so bill growth is more closely linked to approved investments in generation, transmission and distribution infrastructure to maintain reliability, replace aging assets and support growing electricity demand. In deregulated markets, affordability pressures are often driven by wholesale electricity prices and capacity costs, which are determined in competitive markets and passed through to customers. As a result, identical bill increases can have very different underlying causes and implications depending on the regulatory framework. Consistent with this distinction, many of the states that have experienced the largest recent bill increases — including DC, New Jersey, Maryland and New York — are located in competitive power markets such as PJM, where tighter supply-demand balances and higher capacity prices have contributed to bill inflation.

Exhibit 2: Deregulated power markets account for many of the states with the largest bill increases from June 2023-June 2026

Residential bill inflation and affordability burden across regulated and deregulated states.

Source: Goldman Sachs Global Investment Research

We forecast a range of 3.7% to 7.9% bill inflation on average through 2029

depending on capex deployment. We update our forecast for residential utility bill inflation to a 3.7% CAGR through 2029, with bill growth moderating from 5.9% in 2026 to 2.1% by 2029. Despite higher nominal bills, we expect residential electricity costs to decline from ~2.7% of disposable income in 2025 to ~2.6% by 2030 as personal disposable income growth outpaces bill growth. However, affordability pressures remain more pronounced in the near term, with expected 2026 bill growth (+5.9%) exceeding both projected PDI growth (+4.7%) and discretionary cash flow growth (+3.7%). Under our bull capex scenario, annual bill growth increases to 7.9% through 2029, highlighting the importance of balancing investment needs with customer affordability.

Exhibit 3: Projected bill inflation exceeds broader inflation in the near term but moderates by 2029

Residential bill inflation versus GS US PCE inflation forecasts

Source: Goldman Sachs Global Investment Research, EIA

Exhibit 4: Higher utility investment could increase customer bills under our bull capex scenario, holding all else constant

Average annual residential utility bill under base and bull capex scenarios.

Source: Goldman Sachs Global Investment Research

PJM affordability issue is most acute over past three years. There are wide regional discrepancies of 3-year accumulated bill inflation where the highest inflation has been in DC (+55.8%), New Jersey (+43.4%), Maryland (+40.0%), New York (+29.1%), and Ohio (+27.4%) and the lowest inflation has been in Nevada (~18%), New Hampshire (~4.7%), Hawaii (~2%), Louisiana (1.8%), and Kansas (+3%). Every state in PJM, the region covering 13 states plus Washington DC across the Mid-Atlantic, has seen bill inflation from June 2023-June 2026 higher than the US national average.

Exhibit 5: DC, NJ, MD, NY, and OH are the states with the highest bill inflation, with NV, NH, HI, LA, and KS the lowest on a 3-year accumulated bill inflation basis

Residential bill inflation, 3-year accumulated bill inflation and utility exposure by jurisdiction.

Based on this geographic bill inflation exposure, we see utilities operating with a majority of their asset base in **PJM or NYISO as more challenged on affordability** including **ED (Sell)**, **EXC (Sell)**, **PEG (Neutral)**, and **FE (Buy)** though we note this does not take into account how individual company bills stack up relative to other state or regional utilities. On the other hand, utilities that screen as **better positioned on bill inflation include: XEL (Buy)**, **SO (Neutral)**, **NEE (Not Rated)** given their greater exposure to states with lower affordability pressures, including SD, MN, NM, CO, ND, TX, GA, AL, and FL. In our view, **AEP (Neutral)** falls somewhere in between with 58% of its rate base in jurisdictions with above-average bill inflation. Despite this, AEP still benefits from a higher mix of commercial and industrial customers and large-load tariff frameworks that can help absorb future infrastructure costs and mitigate affordability-related regulatory risk.

The Anatomy of the Electric Utility Bill

To evaluate affordability, we must first understand the different components of the utility bill and what drives an increase/decrease in each one of them. Each component is governed by different regulatory frameworks, driven by distinct cost drivers, and carries unique implications for utility earnings. We recognize that every state and utility bill can be different, and these are meant to be general overviews. Overall, there are three main parts of an electric utility bill: (1) supply charge, (2) delivery charge, and (3) other

customer charges. We provide more detail on each of these components below.

Unbundled bill structure highlights separate supply and delivery charges

Example of a ConEd electricity bill breakdown

Your electricity breakdown								Rate: EL1 Residential or Religious	
Electric Meter Detail - billing period from February 2, to March 5, 2024								(32days)	
Meter#	New Read	Read Type	Date	Prior Read	Read Type	Date	Read Diff	Total Usage kWh	
012392458	18533	Actual	Mar 05	18291	Actual	Feb 02	242	242	
● Your Supply Charge Supply 242.00 kWh @ 11.649 ¢/kWh \$28.19 Merchant Function Charge \$0.989 GRT & other tax surcharges \$0.70 Sales tax @ 4.5% \$1.34 Total electricity supply charges \$31.21								● Your Delivery Charge Basic service charge \$20.91 Delivery 24.00 kWh @ 17.917 ¢/kWh \$43.38 System Benefit Charge @ 0.678 ¢/kWh \$1.64 GRT & other tax surcharges \$3.24 Sales tax @ 4.5% \$3.11 Total electricity delivery charges \$72.28	
Your total electricity supply cost for this bill is 12.34 ¢ per kWh. You can compare this price with those offered by energy services companies (ESCOs), visit PowerYourWay.com or call 1-800-780-2884								Your electricity total \$103.47	

Supply / Generation charge

What it is: The cost associated with producing electricity or purchasing it from wholesale markets. It is typically billed on a volumetric basis (cents per kilowatt-hour, or cents/kWh) multiplied by total monthly consumption.

What makes it move:

- **Commodity prices:** Natural gas is the marginal fuel in most U.S. power markets. Spikes in Henry Hub prices directly pass through to the supply charge via fuel adjustment clauses.
- **Capacity prices:** In deregulated capacity markets (such as PJM, NYISO, and ISO-NE), the price paid to generators to guarantee availability is passed directly to consumers. Tight supply-demand balances, coal retirements, and load growth can cause capacity prices to clear at regulatory caps, creating immediate bill shock.

Riders, surcharges and deferrals

What it is: Specialized, state-approved billing mechanisms that bypass traditional rate cases to allow utilities to recover specific costs in near-real-time.

What makes it move:

- **Fuel and storm cost deferrals:** If fuel or storm restoration costs exceed budgeted amounts, utilities defer these costs to a regulatory asset and recover them over time via a dedicated rider.
- **Public benefit and wildfire charges:** State-mandated surcharges to fund energy efficiency programs, low-income assistance, clean energy subsidies, or wildfire mitigation funds (e.g., California's Wildfire Fund).
- **Bad debt recovery:** Surcharges to recover uncollectible accounts, which tend to rise during periods of high inflation or economic stress.

Fixed customer charge

What it is: A flat monthly fee (e.g., \$10 to \$20 per month) charged to every customer account, regardless of how much electricity is consumed. It is designed to recover the fixed costs of being connected to the grid.

What makes it move:

- **Regulatory approvals:** Utilities frequently request increases to fixed charges in rate cases to ensure revenue stability, especially as energy efficiency and rooftop solar reduce volumetric sales. However, consumer advocates strongly resist these increases, arguing they disproportionately impact low-income consumers and reduce the incentive to conserve energy.

Energy delivery charge

What it is: Specialized, state-approved billing mechanisms that bypass traditional rate cases to allow utilities to recover specific costs in near-real-time.

What makes it move:

- **Fuel and storm cost deferrals:** If fuel or storm restoration costs exceed budgeted amounts, utilities defer these costs to a regulatory asset and recover them over time via a dedicated rider.
- **Public benefit and wildfire charges:** State-mandated surcharges to fund energy efficiency programs, low-income assistance, clean energy subsidies, or wildfire mitigation funds (e.g., California's Wildfire Fund).
- **Bad debt recovery:** Surcharges to recover uncollectible accounts, which tend to rise during periods of high inflation or economic stress.

Transmission

What it is: The cost of moving high-voltage electricity over long distances from generation plants to local distribution networks. These rates are regulated at the federal level by the Federal Energy Regulatory Commission (FERC).

Distribution

What makes it move:

- **Regional Transmission Organization (RTO) planning:** Large-scale regional reliability projects and multi-state transmission lines driven by RTO long-range plans.
- **Interconnection costs:** The cost of connecting new, geographically dispersed renewable generation (wind and solar) to the high-voltage grid.
- **Grid upgrades:** Replacing aging high-voltage towers, substations, and physical security infrastructure.

What makes it move:

- **Utility capex:** Local grid investments, including replacing wood poles, upgrading neighborhood transformers, and undergrounding lines.
- **Grid hardening and storm recovery:** Capital deployed to make the local grid resilient against extreme weather (e.g., wildfires in California, hurricanes in the Gulf Coast).
- **Electrification trends:** Upgrading local circuits to handle the localized demand spikes from residential electric vehicle chargers and heat pumps.
- **Usage:** Delivery costs are based on the amount of energy consumed from the shared system

Source: Company data

Exhibit 6: Generation has historically been the most expensive category, making up ~60% of total prices on average

Electricity price breakdown by service category (cents/kWh)

Source: EIA

Supply / Generation charge

- **What it is:** The cost associated with producing electricity or purchasing it from wholesale markets. It is typically billed on a volumetric basis (cents per kilowatt-hour, or cents/kWh) multiplied by total monthly consumption.
- **What makes it move:**
 - **Commodity prices:** Natural gas is the marginal fuel in most U.S. power markets. Volatility in local gas prices directly pass through to the supply charge via fuel adjustment clauses.
 - **Capacity prices:** In deregulated capacity markets (such as PJM, NYISO, and ISO-NE), the price paid to generators to guarantee capacity availability is passed directly to consumers. Tight supply-demand balances, coal retirements, and load growth can cause capacity prices to clear at higher levels, creating bill pressures.

Energy delivery charge

Transmission

- **What it is:** The cost of moving high-voltage electricity over long distances from generation plants to local distribution networks. These rates are regulated at the federal level by the Federal Energy Regulatory Commission (FERC).
- **What makes it move:**
 - **Regional Transmission Organization (RTO) planning:** Large-scale regional reliability projects and multi-state transmission lines driven by RTO long-range plans.
 - **Interconnection costs:** The cost of connecting new, geographically dispersed renewable generation (wind and solar) to the high-voltage grid.
 - **Grid upgrades:** Replacing aging high-voltage towers, substations, and physical security infrastructure.

Distribution

- **What it is:** The cost of delivering low-voltage electricity from local substations directly to homes and businesses. This is the core business of regulated electric utilities and is overseen by state Public Utility Commissions (PUCs).
- **What makes it move:**
 - **Utility capex:** Local grid investments, including replacing wood poles, upgrading neighborhood transformers, and undergrounding lines.
 - **Grid hardening and storm recovery:** Capital deployed to make the local grid resilient against extreme weather (e.g., wildfires in California, hurricanes in the Gulf Coast).
 - **Electrification trends:** Upgrading local circuits to handle the localized demand spikes from residential electric vehicle chargers and heat pumps.

Fixed customer charge

- **What it is:** A flat monthly fee (e.g., \$10 to \$20 per month) charged to every customer account, regardless of how much electricity is consumed. It is designed to recover the fixed costs of being connected to the grid.
- **What makes it move:**
 - **Regulatory approvals:** Utilities have the ability to request increases to fixed charges through a rate case to recover costs to serve customers like meter reading, customer service, and billing. There is some debate around these fixed charges because of the relatively greater impacts to low-income customers.

Riders, surcharges and deferrals

- **What it is:** Specialized, state-approved billing mechanisms that bypass traditional rate cases to allow utilities to recover specific costs.
- **What makes it move:**
 - **Fuel and storm cost deferrals:** If fuel or storm restoration costs exceed budgeted amounts, some utilities defer these costs to a regulatory asset and recover them over time via a dedicated rider.
 - **Public benefit and wildfire charges:** State-mandated surcharges to fund energy efficiency programs, low-income assistance, clean energy subsidies, or wildfire mitigation funds (e.g., California's Wildfire Fund).
 - **Bad debt recovery:** Surcharges to recover uncollectible accounts, which tend to rise during periods of high inflation or economic stress.
 - **Capex riders.** The DSIC (Distribution System Improvement Charge), for example, is a surcharge that allows utilities to recover the costs of repairing, improving, or replacing aging distribution infrastructure between formal base rate cases to accelerate system modernization and limit more frequent rate cases.

How customer bills differ across regulated and deregulated markets

There are differences between customer bills in states that are deregulated versus regulated. For *deregulated* markets (as shown in [Exhibit 8](#)), supply and delivery charges are shown separately, allowing customers to see which portion of the bill is driven by wholesale power markets versus utility-owned infrastructure. In the interactive ConEd sample bill example shown above, the customer pays roughly \$31 of supply charges and \$72 of delivery charges. Supply cost is ultimately the revenue for the power generator, which in a deregulated state is not the regulated utility. The delivery charges reflect the regulated utility's charge for recovering transmission and distribution costs to bring the power to the customer. Bills for *regulated* markets could be shown in a more consolidated way, due to the fact that the regulated utility provides the generation, transmission, and distribution services, and charges a regulator approved rate, alongside any approved riders/surcharges. Consequently, long-term bill growth tends to be more closely linked to utility investment in generation, transmission, and distribution infrastructure, as well as regulatory decisions regarding cost recovery, rather than short-term fluctuations in wholesale power markets, which are often deferred and recovered over longer time periods.

Exhibit 7: In a regulated power market, the utility owns the entire value chain, while in a deregulated market it operates only the delivery piece

Snapshot on Utility Bill Trends

The average monthly US residential electric utility bill is \$171 as of June 2026 on a TTM basis, versus \$165 as of June 2025. The range of electric utility bills for residential customers is wide, with the lowest monthly bill today in New Mexico at \$76, and the highest monthly bill in Hawaii at \$255. Utility bill inflation lagged CPI from 2008, but starting from 2021, it has outpaced CPI by 7pp. This accelerated bill inflation, coupled with the heavy election cycle this year, has driven utility bills into the national spotlight. Looking forward, we expect bill inflation across the US to average a 3.7% CAGR through 2029, with bill growth moderating from 5.9% in 2026 to 2.1% by 2029.

Monthly residential utility bills have grown 6% YoY in the US on a TTM June 2026/2025 basis

Monthly residential utility bills by state (TTM June 2026/2025)

Source: EIA, Goldman Sachs Global Investment Research

Exhibit 9: Utility bill inflation lagged CPI from 2008, but starting from 2021, it has outpaced CPI by 7pp
Consumer Price Index vs. residential customer bill inflation, 2021 = Index 100

Source: EIA, Goldman Sachs Global Investment Research

To put the nominal bill level into context, the average monthly bill in 2026 would take 12.6 hours on average, or roughly 30% of a 40-hour workweek for a customer making minimum wage to cover. However, the burden varies substantially across states, ranging from 22.5 hours required in Texas, the highest in our analysis, to 6.4 hours in Colorado, the lowest — highlighting the significant differences in affordability across jurisdictions.

Exhibit 10: Texas requires 22.5 hours of work at the state minimum wage to pay the average monthly utility bill vs. 6.4 hours in Colorado, while the US average is 12.6 hours

Hours a worker earning minimum wage would have to work to pay their monthly utility bill

Source: US Department of Labor, Goldman Sachs Global Investment Research

Across the US, we see the affordability issue as most acute in PJM (DC, New Jersey, Maryland, and Ohio), as well as New York, and in general we see regulated markets as better positioned. We continue to believe inflation is the main metric that matters for customer perception of affordability pressures, though we note that share of wallet

sometimes tells a different story. For example, Alabama, Mississippi, Hawaii and West Virginia currently exhibit some of the highest customer bill burdens on disposable income nationally, well above the US average of 2.8% on a share of wallet basis; however, both Alabama and Hawaii demonstrated below-average bill inflation over the last three years ending June 2026. Meanwhile, Connecticut and California have seen below-average bill inflation over the last three years, though absolute bill levels remain elevated and affordability remains topical for both regulators and legislators.

Exhibit 11: Residential bill inflation has ranged from +55.8% in DC to -18% in Nevada since 2023, highlighting significant regional dispersion

Accumulated residential bill inflation (June 2023-2026) for the five highest and five lowest inflation states

Source: EIA, Goldman Sachs Global Investment Research

Regional Variations in Utility Bills

Regulated Markets

In states with traditional **regulation** (such as the Southeast and parts of the Midwest), a single utility owns the power plants, the high-voltage transmission lines, and the local distribution system. In these jurisdictions, the state Public Utility Commission (PUC) calculates an all-in, consolidated revenue requirement (RR). This consolidated RR covers the capital and operating costs of all three segments:

- **Generation:** Costs to build, operate, and maintain power plants, plus fuel and purchased power.
- **Transmission:** Costs for high-voltage lines and substations.
- **Distribution:** Costs for local neighborhood poles, transformers, and meters.

We have explored the bills of utilities in our coverage, and include some examples of

how the regional nuances impact what we see on the regulated utility bill below. We include CAISO here given residential direct access was suspended, though it still exists for C&I customers.

Southeast

- **Storm recovery riders:** allows the utility to recovery extraordinary costs incurred from restoring service, rebuilding infrastructure, and clearing debris following severe weather events
- **Fuel cost adjustments:** allows the utility to adjust customer bills to recover the fluctuating cost of fuel

MISO

- **Renewable energy rider:** allows utilities to recover state-approved costs of transitioning their generation fleets to meet clean energy mandates
- **Low-income assistance fee:** a state mandated non-bypassable surcharge to fund bill-assistance for low-income consumers given MISO south region contains some of the most impoverished areas in the US

Exhibit 12: Renewable energy riders and low-income assistance fees could be variables impacting utility bills in MISO

CAISO

- **Wildfire fund surcharges:** state-mandated fee collected from utility customers to capitalize a shared fund that helps protect utilities from catastrophic wildfire liability
- **Time-of-use as the default rate structure:** this refers to the billing framework where electricity prices vary by time of day, giving customers the opportunity to shift usage away from peak-demand hours

Exhibit 13: Wildfire fund surcharges and TOU default rate structure could be variables impacting bills for utilities in CAISO

De-Regulated Markets

In **deregulated** states (such as the Mid-Atlantic, Northeast, and parts of California), the utility business is unbundled. The utility is legally prohibited from owning generation and acts solely as a delivery company. Consequently, the revenue requirement is split across different regulatory bodies and different bills:

- **Distribution revenue requirement (State Level):** The state PUC determines the revenue requirement solely for the local distribution system (the local poles, wires, and customer service). This is what dictates the distribution charge on a bill.
- **Transmission revenue requirement (Federal Level):** This is the revenue an electric utility is authorized to collect from customers to cover the costs of transmitted electricity over high-voltage power lines. These are regulated by the Federal Energy Regulatory Commission (FERC), while the state may set the retail rate. The utility files a separate transmission revenue requirement with FERC, with the exception of ERCOT, which is electrically isolated from other grids and regulated instead by the Public Utility Commission of Texas (PUCT).
- **Generation / Supply charges (market-based):** In deregulated states, there is no regulated revenue requirement for generation. Instead, the supply charge is determined by competitive wholesale energy and capacity markets (such as PJM or ISO-NE). The price is set by market supply and demand, which is then passed directly through to the customer's Supply Charge.

We include below some examples of how the de-regulated power market structure impacts what we see on the bill.

We note for ERCOT, that T&D utilities are legally barred from sending residential bills; instead the bills come from Retail Electric Provider (REP) such as Reliant (NRG) or TXU (VST) and T&D utilities such as Oncor's (SRE) charges are included as another line item in the invoice.

ERCOT

- **Usage charge:** variable charge depending on the total volume
- **Energy charge:** portion of the bill billed by the Retail Energy Provider to cover the cost of sourcing, producing, and managing the actual electricity
- **TDSP delivery charge:** state-regulated fee passed through to customers to cover the cost of transmitting and distributing electricity over local power lines and poles

Exhibit 14: Usage, energy, and TDSP delivery charges could be variables impacting bills for utilities in ERCOT

ERCOT Utility Bill Example

ERCOT

PJM

- **Basic Generation Service:** this is the charge that customers see for their supply service if they do not choose a competitive third-party retail energy supplier
- **Delivery charges:** regulated fees on the bill that cover the cost of transporting electricity through high-voltage transmission and distribution systems

Exhibit 15: Basic generation service and delivery charges are some variables on the bills for utilities in PJM
PJM Utility Bill Example

PJM		
	Generation Co. Electric Generation	\$121.03
Generation Charges	1245 kWh x \$0.098 /kWh	\$121.03
The cost of energy generated to meet your kWh usage. This charge is passed through from your generation provider, and Ohio Power Company makes no profit from it.		
	Ohio Power Company Electric Grid	\$131.95
Fixed Monthly Customer Charge	\$13.50 /month	\$13.50
The cost to ensure the electric distribution grid functions regardless of the amount of energy you use.		
Usage Based Energy Charge	1245 kWh x \$0.0347738 /kWh	\$43.29
The cost of the electric distribution grid that delivers power to your home including substations, transformers, poles, wires—and the wages of the crews who build and maintain it.		
Electric Grid Base Rates Subtotal		\$56.79
Basic Transmission Cost Rider	1245 kWh x \$0.0434364 /kWh	\$54.08
The cost of high-voltage transmission lines that carry electricity from distant power plants to your local area.		
kWh Tax Rider (first 2,000 kWh)	1245 kWh x \$0.0046500 /kWh	\$5.79
A state tax mandated by the Ohio General Assembly.		
Tax Savings Credit Rider	1245 kWh x -\$0.0019061 /kWh	-\$2.37
A state tax mandated by the Ohio General Assembly.		
Energy Efficiency Rider	1245 kWh x \$0.0004541 /kWh	\$0.57
The cost of programs to help low-income customers use less electricity.		
PIPP Rider	1245 kWh x \$0.0055215 /kWh	\$6.87
Funding for an Ohio program that helps low-income households pay their utility bills.		
Enhanced Service Reliability Rider	5.80236% of base rates	\$3.30
The cost of tree trimming and maintenance to help prevent outages and improve reliability.		
Distribution Investment Rider	5.38966% of base rates	\$3.06
The cost of building new grid infrastructure to support growth and enhance reliability.		
Economic Development Cost Recovery Rider	1.80190% of base rates	\$1.02
Funding for economic development programs in our service territory.		
Storm Damage Recovery Rider	\$0.19 /month	\$0.19
The cost of responding to severe storms that required extensive manpower and resources to restore power.		
gridSMART Rider	\$2.65 /month	\$2.65
The cost of installing advanced meters and modern grid technologies to improve service reliability.		
	Electricity Cost	\$252.98

Northeast

- **Merchant function charge:** covers the administrative costs and procurement risks associated with the utility acting as an energy supplier
- **Public benefits surcharges:** state-mandated fees to fund public policy programs including energy efficiency incentives, low-income assistance, and renewable energy development
- **Federal mandated congestion charge:** federally authorized transmission charge that recovers the extra cost of delivering power into regions where transmission line limitations restrict the flow of cheaper electricity

Exhibit 16: Merchant function charges, public benefits charges, and federal mandated congestion charges could be variables impacting bills for utilities in the Northeast

Real customer bill evolution

In this analysis, we evaluate what pieces of the bill are driving volatility over the course of a year to better contextualize what process in delivering electricity to a customer's home is facing higher costs. We take a deeper look into the bill evolution by zooming into two PJM utility customer bills, one from JCP&L and one from PSE&G. Over the past year, we observe the same three components of the bill including 1) generation, 2) delivery, and 3) customer charges.

Exhibit 17: The customer bill is made up of three main components on a PJM bill: generation, delivery, and customer charge

PJM customer bill example

Date	9/10/2026
Usage (kWh)	826
Customer charge	\$4.27
Basic Generation Service	\$130.40
Delivery Service Charge	\$39.08
Total payment	\$173.75

Source: Goldman Sachs Global Investment Research

The customers' bills dip in the fall to winter months and peak in the summer months. This largely reflects usage, where the summer spike is from more power being used to cool the home. Given this seasonality, we also take a look at what the bill would be if we assume a steady usage every month in line with the average usage over the year, to remove the usage driver from the customer bill and also exclude any pro-rating the company does to keep bills or credits the customer receives low.

Exhibit 18: Excluding usage volatility over the course of the year, there are still fluctuations in supply and delivery charges

JCP&L customer bill example over the year

Source: Company data, Goldman Sachs Global Investment Research

Exhibit 19: Excluding usage volatility over the course of the year, there are still fluctuations in supply and delivery charges

PSE&G customer bill raw versus usage normalized

Source: Company data, Goldman Sachs Global Investment Research

Exhibit 20: Generation makes up on average ~73% of the total bill, which is exposed to wholesale market volatility for PJM customers

JCP&L Customer Bill Components

Source: Company data, Goldman Sachs Global Investment Research

Exhibit 21: Supply charges typically make up ~70% of this PSE&G customer bill

Supply/Delivery/Service Charge components of a PSE&G customer bill (including usage)

Source: Company data, Goldman Sachs Global Investment Research

We can see that the supply portion of customer bills inflected in May and June 2026 YoY as a result of capacity price hikes, where we saw a ~833% rise in capacity prices from \$28.92/MW-day to \$269.92/MW-day driven by tightening supply/demand in the power market.

Exhibit 22: We saw the steepest increases in \$/kWh on a YoY basis in May and June 2026 for the PSE&G customer

YoY \$/kWh change (%) for May-September 2026, respective capacity price increase YoY

Source: Company data, Goldman Sachs Global Investment Research

While our customer bill data for a JCP&L customer only spans the past 11 months and our PSE&G bills only span 15 months, we analyze EIA data that includes residential sales revenue and number of customers from which we derive an average bill for the respective timeframe. We compare the nominal bill with natural gas spot prices (specifically for the TETCO M3 region) and capacity prices in PJM and notice that the prices move in similar directions. The regression for the June 2021-June 2025 time frame reflects an R-squared of 0.73 for JCP&L's customer bills and capacity prices on an annual average basis. Our multi-variable regression including natural gas reflects an R-squared of 0.88 over the 6-year period on an annual average basis.

Exhibit 23: We see a 73% R-squared between JCP&L's customer bills and capacity

Correlation between JCP&L's customer bill and capacity prices on an annual average basis

Source: EIA, Goldman Sachs Global Investment Research

How does this flow back to the utility?

At a high level, utilities are generally regulated entities that have their earnings potential set by a state and/or federal commission. Regulators generally allow utilities to recover prudently incurred costs and earn a return on their investments through the rates charged to customers provided that utilities provide safe and reliable service. Ultimately, state regulators determine the return on capital that the company is allowed to earn on investment, the capital structure that the utility is allowed to have and the **revenue requirement** (or revenue increase) a utility company is allowed to make after it has deployed capital investments to improve, expand or maintain its assets. That allowed revenue increase will ultimately be reflected in customers' electricity bills.

The standard revenue requirement formula is the following:

Exhibit 24: The allowed revenue increase from what is determined in the below, is what is reflected in customers electricity bills

Standard Revenue Requirement Formula

Source: Goldman Sachs Global Investment Research

Stock Implications

An implication for utilities of affordability concerns around rising electricity bills is that regulators may be less willing to approve rate increases, returns, or incremental capital investment programs. While we continue to view the regulated utility sector as being in a multi-year investment upcycle, the sustainability of that opportunity will depend in part on customer willingness and ability to absorb higher bills.

Many of the jurisdictions that have experienced the largest bill increases since 2023 are located within competitive power markets, where higher capacity prices, tighter supply-demand balances, and rising wholesale power costs have contributed to affordability pressures. States such as DC (+55.8%), New Jersey (+43.4%), Maryland (+40.0%), New York (+29.1%) and Ohio (+27.4%) have experienced some of the largest customer bill increases nationally. As a result, Sell-rated **EXC**, Sell-rated **ED** and Neutral-rated **PEG** screen among the more challenged names in our coverage given their exposure to these jurisdictions and higher bills at the individual utilities in certain cases.

Exhibit 25: EXC customer bill inflation is slightly lower than the weighted average bill inflation across its footprint over the last 3 years ending June 2026

EXC subsidiary bill inflation compared with state average bill inflation by jurisdiction.

Source: EIA, Company data, Goldman Sachs Global Investment Research

Exhibit 26: ED's customer bills are slightly above the state average bill inflation for New York over the last 3 years ending June 2026

ED subsidiary bill inflation compared with state average bill inflation by jurisdiction.

Source: EIA, Company data, Goldman Sachs Global Investment Research

Exhibit 27: PEG customers have seen a 51% increase in their bills versus the state average of 43% over the last 3 years ending June 2026

PEG subsidiary bill inflation compared with state average bill inflation by jurisdiction.

Source: EIA, Company data, Goldman Sachs Global Investment Research

We also recognize the impact of the cost of electricity in raising affordability concerns where some states screen lower on a bill inflation basis but are facing higher affordability pressures. For example, bill inflation in California has moderated to 12.0% since 2023, below the 13.8% US average, and Connecticut bill inflation has been only 5.0%. However, California continues to exhibit among the highest electricity rates in the country on a TTM ending June 2026 basis of 33.2¢/kWh and above-average monthly bills of \$160.16 versus \$149.60 nationally, due to higher wildfire mitigation costs, public purpose programs and other policy-related charges. As a result, Neutral-rated **EIX**, Buy-rated **PCG**, and Buy-rated **SRE** remain exposed to affordability pressures despite more moderate recent bill inflation.

Exhibit 28: Exposure to higher bill inflation states may create greater affordability-driven regulatory risk

Exhibit 32: SO's customer bills increased slightly less than its weighted-average increase across its state footprint of 11.1%/12.0% respectively over the last 3 years ending June 2026

SO subsidiary bill inflation compared with state average bill inflation by jurisdiction.

Source: EIA, Company data, Goldman Sachs Global Investment Research

We believe C&I exposure and large-load tariff structures could also mitigate affordability-related regulatory risk. Utilities with greater exposure to commercial and industrial customers may be better positioned as regulators could allocate a larger portion of future infrastructure costs to large-load customers rather than residential customers. In our coverage, **XEL**, **WEC** and **SO** have some of the highest exposure to C&I demand. In addition, companies including **SO**, **AEP**, **NEE**, **WEC**, **DUK**, **D**, **AEE** and **XEL** have implemented or proposed large-load tariff structures, which we view as constructive from both affordability and regulatory perspectives as load growth and capital investment accelerate.

Exhibit 33: XEL, WEC and SO have the most exposure to Commercial and Industrial power demand

Covered companies electricity volume exposure

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; registered market maker. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at <https://www.gs.com/worldwide/brazil/area/gir/index.html>. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 10th Floor, Ascent-Worli, Sudam Kalu Ahire Marg, Worli, Mumbai-400 025, India, Corporate Identity Number 60634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. Registration granted by SEBI and certification from NISM in no way guarantee performance of the intermediary or provide any assurance of returns to investors. Goldman Sachs (India) Securities Private Limited compliance officer and investor grievance contact details, a copy of the annual compliance audit report and other relevant information and disclosures can be found at this link: <https://www.goldmansachs.com/worldwide/india/research-analyst>. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have

been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at <https://www.gs.com/disclosures/europeanpolicy.html> which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, and Investment Management Association of Japan. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at <https://www.gs.com/research/hedge.html>.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.

Global product; distributing entities

Goldman Sachs Global Investment Research produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; Public Communication Channel Goldman Sachs Brazil: 0800 727 5764 and / or asil@gs.com. Available Weekdays (except holidays), from 9am to 6pm. Canal de Comunicação com o Público Goldman Sachs Brasil: 0800 727 5764 e/ou asil@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom.

Goldman Sachs International ("GSI"), authorised by the Prudential Regulation Authority ("PRA") and regulated by the Financial Conduct Authority ("FCA") and the PRA, has approved this research in connection with its distribution in the United Kingdom.

European Economic Area: Goldman Sachs Bank Europe SE ("GSBE") is a credit institution incorporated in Germany and, within the Single Supervisory Mechanism, subject to direct prudential supervision by the European Central Bank and in other respects supervised by German Federal Financial Supervisory Authority (Bundesanstalt für tungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research within the European Economic Area.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (<https://www.sipc.org>).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such

trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage universe as described herein.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, make a market or act as liquidity provider in, and buy or sell, any securities, derivatives, or other financial instruments referred to in this research (including any financial instruments issued by the companies referred to herein), unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at <https://www.theocc.com/about/publications/character-risks.jsp> and https://www.goldmansachs.com/disclosures/cftc_fcm_disclosures. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to <https://research.gs.com>.

Disclosure information is also available at <https://www.gs.com/research/hedge.html> or from Research Compliance, 200 West Street, New York, NY 10282.
