Buy: Better AI outlook

Equities
Internet Software & Services

China

- ◆ Core business fundamentals are sound but not on an accelerating trend; eyes on next game launch in Sep-26
- ◆ Inferencing cost for Xiaowei may be overestimated
- ◆ Maintain Buy and TP at HKD655.00

AI spending fear may be overplayed: We trim 2026e-28e international games estimates by 3-6% as comps turn tougher into 2H26 and the new game pipeline is expected to remain relatively light in the near term. Domestic game growth is expected to stay more resilient, but we forecast a dip in 3Q26 before picking up again in 4Q26 with new launches (e.g. HoK Chess in Sep-26). As for marketing services, despite a stronger-than-expected 2Q26 print (driven in part by in-app ads contribution from a game under Miniclip), we kept segment revenue unchanged given a challenging macro backdrop. We are encouraged to see an initial monetization contribution from WorkBuddy, although it is still small. We kept our earnings estimates largely unchanged as we expect AI spending to come in lower, offsetting the impact from weaker game performance: 1) Xiaowei's associated inferencing cost may likely be overestimated as it is powered by a smaller parameter size model alongside Tencent's various efforts to drive better token efficiency ([Buy: Progress and investment in AI continue](#), 10 July 2026) and lower marketing spending required; 2) robust GPU rental demand provides immediate monetization option for Tencent's capex investment with good ROI. Our HKD655.00 TP is unchanged. We expect active buyback efforts to continue, providing valuation support; we reiterate our Buy rating.

Noticeable progress in AI: 1) **Gaining external customer traction for HY:** HY3's daily token usage is 7x compared to the HY3 preview across all channels during the paid period. HY4 is scheduled to be launched later this year with higher parameter size. 2) **Decent monetization and margin profile for WorkBuddy and MaaS:** GPM for paying users for WorkBuddy and MaaS are already comparable to Tencent Cloud overall GPM, given that strong demand gives Tencent the ability to lift pricing. This contributed to cloud revenue growth accelerating to low-20% y-o-y, on top of GPU rental. 3) **Xiaowei (consumer agentic AI in Weixin):** Tencent plans to launch Xiaowei by phases, but there is no explicit timeline yet as that depends on testing feedback and improvement over each phase of model iteration.

2Q26 result highlights

The beat in marketing services was mainly driven by contribution of in-app advertising revenue from Arrows – Puzzle Escape (a mobile under Miniclip). If adding back Arrows and other in app-ads revenue in the prior year and current period, international games would have grown 4ppt faster than the reported figure, and online marketing services revenue would have grown 2ppts less than the reported figure.

For details, refer to [Equity Snap: Tencent Holdings \(700 HK\): 2Q26 top-line beat, bottom line came in line](#), 12 August 2026. Additional colour for various segments as follows:

Social network

Revenue grew 0.8% y-o-y (in line with consensus), driven by increased revenue from app-based games item sales, partially offset by 6% y-o-y revenue decline from long-form video subscriptions.

Marketing services

Revenue grew by 22% y-o-y (consensus: 19%), given higher eCPM and impressions. Ad spend across most verticals grew y-o-y, including e-commerce, internet services and local services. Video accounts' ad impressions grew rapidly thanks to higher video views and ad load. Mini Programs attracted rising marketing dollars from mini drama and mini game studios, with higher conversion rate of rewarded ads boosting eCPM.

Fintech and business services (FBS)

Revenue grew 9% y-o-y (consensus: +8%).

- ◆ FinTech revenue growth was driven by commercial payment, wealth management and consumer loan services. For commercial payment, number of transactions grew y-o-y, while decline in value per transaction y-o-y continued to narrow. For wealth management, aggregated customer assets continued to grow y-o-y.
- ◆ Business services revenue growth accelerated to low-20% y-o-y, driven by AI-related demand, international expansion, and increased uptake for general cloud services. AI-related demand translated into increased revenue across GPU rental, Model-as-a-Service, and WorkBuddy & CodeBuddy.

Valuation and risks

		Valuation	Risks to our view
Tencent 700 HK Buy	Current price:	Methodology: DCF Assumptions: WACC of 8.4% is based on a debt/debt-and-equity ratio of 21.1% (from 21%), risk-free rate of 4.25%, mainland China market equity risk premium of 4.75%, beta of 1.21, tax rate of 25%, and cost of debt of 3.2%. We use a terminal growth rate of 3.5%. Our inputs remain unchanged. We derive a TP of HKD655 (unchanged), which implies 41.9% upside. We maintain our Buy rating as we see solid fundamentals in games and ads. RMB counter: For the RMB counter (80700 HK, RMB395.00), our TP of RMB589.00 is converted from our H-share target price based on the HSBC FX team's RMB-HKD assumption of 1.17 at end-2026e.	Downside risks: ◆ Inability to get monetisation approval for games. ◆ Regulatory headwinds for games and internet finance. ◆ A deeper macro slowdown that could affect advertisers' budgets. ◆ Inappropriate advertising and video content. ◆ Changes in user preferences in terms of entertainment formats or communications. ◆ Overhang from major shareholders' reduction of stake over time. ◆ Being included on lists of overseas regulators that can affect operations or even trading/ownership of the stock. ◆ Higher-than-expected AI investment intensity and/or weaker monetisation/ROI could pressure margins and cash flow.

Important disclosures

Equities: Stock ratings and basis for financial analysis

HSBC and its affiliates, including the issuer of this report ("HSBC") believes an investor's decision to buy or sell a stock should depend on individual circumstances such as the investor's existing holdings, risk tolerance and other considerations and that investors utilise various disciplines and investment horizons when making investment decisions. Ratings should not be used or relied on in isolation as investment advice. Different securities firms use a variety of ratings terms as well as different rating systems to describe their recommendations and therefore investors should carefully read the definitions of the ratings used in each research report. Further, investors should carefully read the entire research report and not infer its contents from the rating because research reports contain more complete information concerning the analysts' views and the basis for the rating.

HSBC assigns ratings on the following basis:

The target price is based on the analyst's assessment of the stock's actual current value, although we expect it to take six to 12 months for the market price to reflect this. When the target price is more than 20% above the current share price, the stock will be classified as a Buy; when it is between 5% and 20% above the current share price, the stock may be classified as a Buy or a Hold; when it is between 5% below and 5% above the current share price, the stock will be classified as a Hold; when it is between 5% and 20% below the current share price, the stock may be classified as a Hold or a Reduce; and when it is more than 20% below the current share price, the stock will be classified as a Reduce.

Our ratings are re-calibrated against these bands at the time of any 'material change' (initiation or resumption of coverage, change in target price or estimates).

Upside/Downside is the percentage difference between the target price and the share price.

Rating distribution for long-term investment opportunities

As of 30 June 2026, the distribution of all independent ratings published by HSBC is as follows:

Buy	61%	(13% of these provided with Investment Banking Services in the past 12 months)
Hold	34%	(10% of these provided with Investment Banking Services in the past 12 months)
Sell	5%	(8% of these provided with Investment Banking Services in the past 12 months)

For the purposes of the distribution above the following mapping structure is used during the transition from the previous to current rating models: under our previous model, Overweight = Buy, Neutral = Hold and Underweight = Sell; under our current model Buy = Buy, Hold = Hold and Reduce = Sell. For rating definitions under both models, please see "Stock ratings and basis for financial analysis" above.

For the distribution of non-independent ratings published by HSBC, please see the disclosure page available at <http://www.hsbcnet.com/gbm/financial-regulation/investment-recommendations-disclosures>.
