Sandisk FQ1'27: Pricing and buybacks more than offset cost headwinds; Increase est, Reiterate Outperform TP $3000

Following SNDK F1Q27 results we share here our full debrief and model update. Also see our earlier Quick Take, our HBF Deep Dive and our analysis debunking the bear thesis on ASP price growth deceleration.

F1Q27 results beat across the board with EPS of $49.51, 5%/7% above us/cons. Pricing strength (up 9% QoQ) and buybacks (another 3.2mln shares) more than offset cost headwinds from non-NAND components (e.g. DRAM) and higher eSSD mix. **F2Q27 guidance of $55-57 EPS also better than consensus.**

Management expects Datacenter to remain the primary growth engine, with Datacenter bit demand projected to grow approximately 40% YoY in calendar 2027, while the NBM pipeline exceeds available supply through the end of the decade. New NBMs are being negotiated at higher prevailing market prices, providing further upside as NAND pricing strengthens further.

Commentary on new high performance NAND tiers in the datacenter (such as HBF and other SLC based solutions) was inline with our recent HBF Deep Dive: These new tiers (including HBF, StorageNext and CMX) could create significant incremental NAND demand, and high trade ratios can disproportionately absorb wafer capacity, tightening industry supply and supporting NAND pricing. Management reported HBF progress was on track and they see exciting new opportunities in all these new NAND tiers.

Near term, higher DRAM/component costs and a richer eSSD mix are weighing on Sandisk's cost/GB, but strong pricing and buybacks are more than offsetting this. We increase FY28 and 29 EPS by 7% and 8% as lower share count offsets slightly higher cost. We are now***9%, 11% and 22% above FY27, 28 and 29 consensus*** est. respectively.

DETAILS

Following SNDK F1Q27 results we share here our full debrief and model update. Also see our earlier Quick Take, our HBF Deep Dive and our analysis debunking the bear thesis on ASP price growth deceleration.

Strong F1Q27 Results: Sandisk reported revenue of $11.03bn, 4.5% above Bernstein and 3.1% above consensus, while EPS of $49.51 was 5.1% above Bernstein and 6.8% above consensus. Revenue increased 23% QoQ, driven by approximately 13% bit growth and 9% ASP growth. Datacenter was the key upside driver, with revenue of $4.80bn, 34% above consensus and up 61% QoQ. Gross margin reached 85.1%, 66bps above consensus and up 50bps QoQ, driving operating income of $8.87bn, 4% above consensus.

F2Q27 Guidance: Sandisk guided to revenue of $12.2-12.6bn, gross margin of 84.5%-85.5%, opex of $540-560mn, and EPS of $55.00-$57.00. At the midpoints, guidance implies 12% QoQ revenue growth, broadly stable gross margin of 85.0%, and 13% QoQ EPS growth. **Management expects Datacenter to remain the primary growth engine, with Datacenter bit demand projected to grow approximately 40% YoY in calendar 2027, while the NBM pipeline exceeds available supply through the end of the decade.**

Emerging SLC demand for agentic inference and continued HBF progress could create significant incremental NAND demand, and their high trade ratios can disproportionately absorb wafer capacity, tightening industry supply and supporting NAND pricing.

Emerging SLC demand could further expand NAND demand and tighten supply due to high trade ratio. Management highlighted growing customer interest in high-endurance SLC NAND for agentic inference workloads, potentially replacing significantly more expensive DRAM in selected applications where NAND can meet performance and endurance requirements. This represents incremental demand rather than cannibalization of TLC/QLC, although discussions remain at the architectural stage with no meaningful sales yet. Importantly, operating NAND in SLC mode carries a ~3–4x bit trade-off versus TLC/QLC, meaning even modest adoption could disproportionately absorb NAND wafer capacity and further tighten industry supply. For additional details on high-performance NAND and its benefits for the NAND industry, see our Global Memory & Storage: HBF Deep Dive - Could HBF be the solution to the Memory bottleneck?.

HBF progress continues on track: First HBF memory die has been taped out and entered fabrication, with controller integration and customer sampling targeted for CY27. We estimate HBF trade ratio to conventional NAND at 6.5x in the base case, so as HBF ramps, it could consume meaningful industry wafers, tightening supply and supporting NAND pricing.

Near term, higher DRAM/component costs and a richer eSSD mix are weighing on Sandisk's cost/bit, while longer term, "mourning Moore's Law" reflects slowing NAND cost reductions that could constrain supply growth and support more durable pricing and profitability. We believe aggressive buybacks offset the cost headwinds and support EPS.

Cost/bit modestly worse than expected, offset by buybacks. Cost/bit performance was modestly weaker than our projections, reflecting rising DRAM/other component costs alongside a richer enterprise SSD mix, which carries higher non-NAND content. Blended cost/bit is expected to remain broadly flat through FY27.

Mourning Moore's Law? Management also noted that underlying NAND cost reductions have halved from historical 15% annually to 7-8%, as increasingly complex manufacturing processes require more expensive equipments and longer production cycles, diminishing the cost benefits of technology transitions. We believe that slowing NAND cost scaling could be structurally positive for industry economics by constraining supply growth and supporting more durable pricing power and profitability. For additional thoughts on diminishing Moore's law, please see our Memory & Storage: Is the New Memory Paradigm back? Best Idea Presentation from Bernstein's Strategic Decisions Conference.

Nevertheless, aggressive share repurchases help offset cost headwinds, supporting EPS. Sandisk repurchased approximately 3.2mn shares for $5.0bn during F1Q27, bringing total repurchases over the past two quarters to $9.5bn, or approximately 4% of shares outstanding, with $10.5bn remaining under its authorization. Sandisk maintains its target to return 100% of excess FCF to shareholders over time, representing significant future buybacks, which will benefit EPS and offset cost headwinds.

NBM demand continues to strengthen, providing further pricing upside. Management noted that its NBM pipeline exceeds available supply through 2030, with multiple existing customers returning for additional volumes after underestimating their NAND requirements. Importantly, incremental tranches can be negotiated at prevailing market prices rather than the

pricing of existing agreements, **providing further upside as NAND pricing strengthens**. Management expects contracted-bit commitments to increase beyond the current ~50% of FY27 and ~2/3 of FY28 supply, while remaining selective on customers.

We increase estimates as price and share buybacks more than offset higher cost/GB. We raise FY28 and FY29 EPS by 7% and 8% respectively mainly on lower share count. We are now 9%, 11% and 22% above FY27, FY28 and FY29 consensus estimates respectively (see Exhibit 2 and Exhibit 8).

We reiterate our Outperform rating on Sandisk as the F1Q beat, AI-driven Datacenter momentum, and aggressive share repurchases reinforce our confidence. **TP unchanged at $3000,** which is 10x FY28 EPS (vs. 11x on old est.); this is also 13x through cycle EPS (avg FY26-30). This also compares favorably the average fwd PE of 11x since re-listing (see Exhibit 9).

Bernstein (Canada) Limited, Sanford C. Bernstein (India) Private Limited (SEBI registration no. INH000006378), Sanford C. Bernstein (Singapore) Private Limited, Sanford C. Bernstein Japan KK（サンフォード・C・バーンスタイン株式会社）and analysts employed by Société Générale Africa Technologies & Services to produce Bernstein research under a Global Services Agreement in place between Bernstein and Société Générale.

VALUATION METHODOLOGY

SanDisk Corp

We value SNDK at $3000 on 10x FY28 EPS, or 13x through cycle EPS (5-yr average FY26-30).

RISKS

SanDisk Corp

The biggest risks to the downside on Sandisk and to our price target are that: 1) Near-term numbers look high and face cyclical downside from NAND; 2) SNDK’s disclosures and broader investor communications have been confusing, potentially dissuading more quality-focused investors; and 3) NAND weakness could extend beyond the current cycle and be more structural, in which case Sandisk’s DCF value could be structurally lower and the impaired value of its assets may be materially below replacement cost.
