Asia tech has had a strong start to the year, yet again, with market cap weighted performance at 85% and equal weighted return at 40%. In this report, we join hands with our fundamental tech analysts to present the opportunities within the sector.

The top-down view: We believe in the near-term sector could be more supported by valuations which have come down by 50% from May peak of 36x fwd. PE to 18x fwd. PE ie. -0.7SD below 10yr avg. The sector still remains in net upgrade cycle, however, there are early signs of moderation in upward revisions. Within the sector, except Software, all other sub-sectors are quite cheap with Internet, Interactive Media & Services and Entertainment trading at record low valuations and extreme unloved territory. Of all winning sub-sectors, only Computer Peripherals has seen extreme earnings expectations while others like Semis, Communication equip, Electronic equip still have room for upward revisions to continue. Hence, Semis and equipment names could still do well as both valuation and earnings are supportive while Internet could find some tailwind from earnings recovery. All other underperforming sub-sectors are not showing any clear sign of bottom in either valuation or earnings cycle yet.

Positioning within tech: YTD, momentum and growth tech names are up 97% and 59% respectively, despite the sharp unwind in July. However, Q326 saw signs of rotation with value/quality tech names making a comeback - the two exposures we recommended last quarter. Momentum tech has come down to average valuations but is now seeing peak earnings and crowding cycle. Growth tech has dropped even more to -1SD levels and is still not showing clear peak in earnings. Hence, it doesn't look like a complete rotation yet- but rather than taking direct momentum/growth exposure, we recommend sticking to quality names which are equally attractive on valuations, have room for upward revisions to continue and are likely to see momentum building up in these names. We also like value tech names as the contrarian call given record high bearish sentiment and record low crowding levels. **We show our screens in Exhibit 25- Exhibit 26.** For our updated screens for Asia, China, Korea and India see our Asia Quant Strategy Deck.

Semiconductors: The sector corrected in July but we expect stocks to gradually recover as earnings growth remains very strong. With AI demand still robust, we stay positive on AI and like MediaTek particularly as the thesis is further supported by the rapid share gain in TPU, on top of the overall AI demand. For more conservative investors, TSMC is still a quality compounder with undemanding valuation. For more investors that are willing to take more risks, Samsung, SK hynix & Micron offer notable upsides too. We also initiated on CXMT & rate the stock Outperform.

China Internet: The China Internet sector continues to be a frustrating space, weighed down by headwinds facing the Chinese consumer, and weakness in sentiment around open source AI. Thematically AI remains the only game in town - we think Tencent's AI efforts (e.g. Workbuddy, Hy4) are undervalued, and like the option value associated with personal agents. Meanwhile we expect Alicloud growth to continue to surprise on the upside. We remain fans of Boss Zhipin and NetEase too, given idiosyncratic business drivers.

STRONG START TO THE YEAR - AGAIN LED BY LARGE-CAP TECH

YTD, Asia tech has had a strong start to the year with market cap weighted performance at 78% and equal weighted return at 33% ie. large-caps have been leading, similar to what we saw in 2025. Interestingly, this is the first time in 15yrs that the sector has delivered such strong performance for 4 consecutive years. In terms of sub-sectors, relative to market, performance has been led by Computer Peripherals (+100%), which was at second place in 1H after Semi, while Semiconductors (+82%), the winning subsector in 1H, fell behind slightly to second place by 3Q. Electronic Equip (+64%) and Communication Equip (+47%) remain at third/fourth place YTD. All rest sub-sectors have underperformed market, YTD, with Interactive Media/ Software (-44%) lagging the most. We are seeing sub-sector rotation happened in Q3 with 1H losers including Internet outperformed the market strongly (+16% in Q3 vs. -47% in 1H), followed by IT Consulting & Services (+16% in Q3 vs. -47% in 1H). Among 1H winners, only Computers Peripherals (+3%) outperformed the market in Q3 and other sub-sectors including Semiconductors (-8%), Electronic Equip (-12%) and Communications (-21%) underperformed. Within the top 10 Asia tech stocks - SK Hynix has still dominated (+86%) followed by Samsung (+82%) and TSMC (+41%) while Infosys (-35%), TCS (-33%) and Alibaba (-31%) have suffered the most.(Exhibit 1- Exhibit 4).

Despite the momentum unwind, winning sub-sectors in 1H, ie. Semis, Computer Peripheral, Electronic and Communication equipment, have continued to do well, though giving lower performance than in 1H, except Computer Peripheral which saw the performance improving. However, sub-sectors that underperformed market in 1H saw return improvement in 3Q, such as Internet (+16% in 3Q, -47% in 1H), and Interactive Media (-1% in 3Q, -44% in 1H). There is a rotation within tech sub-sectors, while momentum trend has continued persistently through 3Q.

ASIA TECH - ATTRACTIVE VALUATIONS BUT EARNINGS CYCLE SLOWING DOWN

After seeing peak valuation of 36x fwd. PE in May, Asia tech sector is now trading at 18x fwd. PE, which is -1.8SD below the 5yr average and -0.7SD below 10yr average. Relative to the market, the sector is trading at a 30% premium vs. 5yr average of 40%. Valuation of the most expensive cohort is also in de-rating cycle, trading at 51x fwd PE, which is -1.4SD below the 5yr average and -0.4SD below 10yr average fwd PE. Overall tech valuations have corrected significantly to attractive pricing levels. On revenue multiples, the tech sector has been priced down to 3.6x PS ie. +0.8SD above 5 year mean and +1SD above 10yr average. Relative to the market, the sector premium is 35%, which is slightly above the 5yr average premium of 32%. The expensive tech cohort is also stretched at 14.7x PS which is +2.4SD above 5yr levels and +2.3SD above the 10yr mean. This is still shy of the extremes seen in tech bubble. Hence, sector looks cheap on fwd. PE but not so much on PS. (Exhibit 5-Exhibit 8) Interestingly, earnings support still remains strong for the sector - the upgrade cycle for tech sector is intact and there is ample room for the trends to continue. Even relative to the market, the tech sector has been seeing improving earnings revision, however pace of upgrades has started slowing down now. (Exhibit 9-Exhibit 10) Hence, it seems like sector could start finding more support on valuations while earnings cycle continues to slow down.

SUB-SECTOR LEVEL ANALYSIS - VALUATIONS, EARNINGS AND CROWDING

The momentum unwind has resulted in a broad based valuation correction, narrowing dispersion within the sub-sectors. All winning sub-sectors, like Electronic Equip, Communication Equipment, Semis and Computer Peripheral have seen sharp correction in valuation from record high PE to now trading at or below long-term average PE level. Except Software, all other sub-sectors are quite cheap while Internet, Interactive Media & Services and Entertainment have fallen to record low valuations. On Price to Sales, all sub-sectors either have peaked after reaching record high in valuation or remained in valuation down cycle. Communication Equipment/Computer Peripherals/Semis still look quite expensive. Underperforming sectors like Interactive Media & Services and Internet have fallen to record low valuations. Broadly, the sectors, which were cheap in 1H, have become even cheaper in the past quarter and sub-sectors such as Communications equip, Computer peripheral, Electronic equip, and Semis have become less expensive in the past quarter. (Exhibit 11-Exhibit 12) Overall, Computer Peripherals, Communications equip, Semis and Electronic equip look less expensive while Internet, Entertainment and Interactive Media & Services remain the cheapest on both multiples.

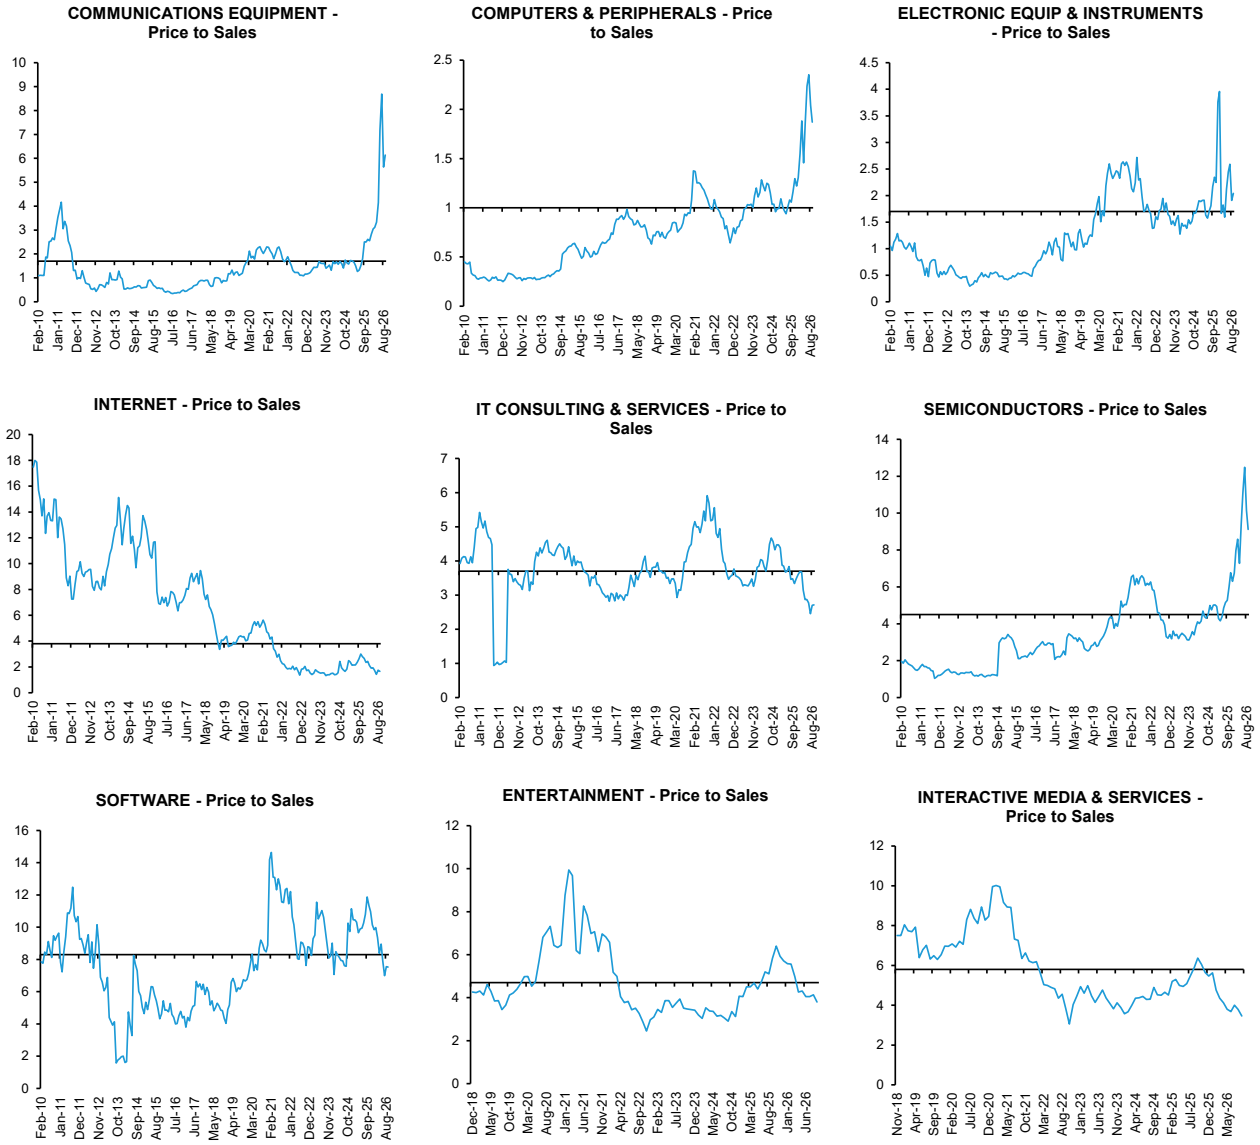

Within the tech sector, only an average stock in Electronic equip is near 100percentile of crowding relative to past 5yr trends, the rest sub-sectors shows no crowding risk while Interactive Media, Entertainment, Internet and Software have fallen to extreme unloved territory. The earnings expectations are almost aligned with investor interest. Of all winning sub-sectors, only Computer Peripherals has seen extreme earnings expectations while others like Semis, Communication equip, Electronic equip are still shy of the record high upward revisions. Interactive Media/Entertainment have fallen near record bearishness while downgrades for Internet has bottomed (Exhibit 13-Exhibit 14). Valuation and earnings are still supportive of Semis and equipment names while Internet seems to be showing some signs of earnings recovery. All other underperforming sub-sectors have been cheap and have kept becoming cheaper, but there is no sign of clear bottom in either valuation or earnings cycle yet.

THE FACTOR VIEW WITHIN TECH

We started the year with a barbell positioning of momentum tech on one side and diversifying into value tech to manage the building risk in momentum trade. YTD 2026, despite the momentum unwind, Momentum tech (+97%) has remained the best performing style, followed by Growth (+59%) and Value/Div. yield (+42%), vs. Asia tech up 33%. SMID tech names (+15%) and Low volatility tech names (+17%) have underperformed the most. In first half of 2026, Momentum tech (+128%) was the best performing factor followed by Growth (+69%) while value/quality/yield (39%) was not able to beat the sector which was up 40% with size being the worst performer (+12%). Led by the momentum unwind in Jun/Jul, Momentum tech (-14%) has turned to be the worst hit in 3Q, followed by Growth (-6%) which is down as much as the sector itself. The laggards in 1H, such as high Div. yield (+4%) and size/ FCF DY (+3%), have outperformed in Q3. Hence, a slow intra-sector rotation has been playing out since 2H, however, momentum/growth has not completely reversed due to a strong earnings cycle. We believe a barbell positioning still makes sense. (Exhibit 15-Exhibit 17)

Valuations of all factors have seen a sharp correction after peak valuation in May, and growth/momentum/large-cap/quality tech names have become quite cheap, trading either on average PE or -1SD below average PE. So far, only high value tech names are still expensive relative to overall market, +1SD above fwd. PE levels. **Asia Growth tech** is trading -1SD below its own 10yr average PE, even relative to market and low growth. Earnings upgrade has been strong since April and is now at record high level, raising concerns around potential peak in expectations. Crowding is also elevated, especially on L/S basis. **High momentum tech** basket has peaked on valuation and is trading near average fwd. PE. However, earnings expectation has also just peaked from record high and investor sentiment has also hit record high level. Hence, overall support for momentum is now moderating. **Asia Tech Large Caps** reached record valuations in May but have seen sharp de-rating since then, now trading at -1SD below average levels. However, the upward revisions still have room to continue as they haven't reached extreme levels yet. Though it is a crowded trade. We believe large-cap tech leadership is likely to continue as the earnings cycle is still intact. **Asia Tech Value** portfolio is not cheap to its own history, however relative to expensive cohort, it is still trading below average valuations. More importantly, value is at extreme bearish earnings sentiment and extreme low crowding levels relative to expensive names - this warrants a contrarian positive view on cheap tech names. **Asia Quality Tech** stocks are fairly priced on average level relative to market/low quality, with strong earnings support and improving investor interest, though quite low relative to market. Hence, we believe quality tech names will do well and opportunities are emerging. Given the dispersion within tech with growth tech at record high momentum while value/quality still having ample room for momentum to build up, we believe chasing value and quality at this point makes more sense. (Exhibit 18-Exhibit 22). We recommend sticking to quality tech names while also adding more value tech names. We show screens in Exhibit 25- Exhibit 26.

RATINGS DEFINITIONS, BENCHMARKS AND DISTRIBUTION

EQUITY RATINGS DEFINITIONS

Bernstein brand

The Bernstein brand rates stocks based on forecasts of relative performance for the next 12 months versus the S&P 500 for stocks listed on the U.S. and Canadian exchanges, versus the Bloomberg Europe Developed Markets Large and Mid Cap Price Return Index EUR (EDME) for stocks listed on the European exchanges and emerging markets exchanges outside of the Asia Pacific region, versus the Bloomberg Japan Large and Mid Cap Price Return Index USD (JPL) for stocks listed on the Japanese exchanges, and versus the Bloomberg Asia ex-Japan Large and Mid Cap Price Return Index (ASIAX) for stocks listed on the Asian (ex-Japan) exchanges -unless otherwise specified.

The Bernstein brand has three categories of ratings:

- Outperform: Stock will outpace the market index by more than 15 pp
- Market-Perform: Stock will perform in line with the market index to within +/-15 pp
- Underperform: Stock will trail the performance of the market index by more than 15 pp

Coverage Suspended: Coverage of a company under the Bernstein research brand has been suspended. Ratings and price targets are suspended temporarily, are no longer current, and should therefore not be relied upon.

Not Rated: A rating assigned when the stock cannot be accurately valued, or the performance of the company accurately predicted, at the present time. The covering analyst may continue to publish research reports on the company to update investors on events and developments.

Not Covered (NC) denotes companies that are not under coverage.

Bernstein brand stock ratings are based on a 12-month time horizon.

Autonomous brand – common stocks

环球研报直通车 一手研报库 订阅报告-微信：waiziyanbao

The Autonomous brand rates common stocks as indicated below. As our benchmarks we use the Bloomberg Europe 600 Financials Price Return Index (E600BK) and Bloomberg Europe Dev Mkt Financials Large and Mid Cap Price Ret Index EUR (EDMFI) index for developed European banks and Payments, the Bloomberg Europe 600 Insurance Price Return Index (E600IN) for European insurers, the S&P 500 and S&P Financials for US banks and Payments coverage, S5LIFE for US Insurance, the S&P Insurance Select Industry (SPSIINS) for US Non-Life Insurers coverage, the Bloomberg Emerging Markets Financials Large, Mid and Small Cap Price Return Index (EMLSF) for emerging market banks and insurers and Payments, and the Bloomberg Japan Financials Large & Mid Cap Price Return Index (JPFILM) for Japanese Financials. Ratings are stated relative to the sector (not the market).

The Autonomous brand has three categories of common stock ratings:

- Outperform (OP): Stock will outpace the relevant index by more than 10 pp
- Neutral (N): Stock will perform in line with the market index to within +/-10 pp
- Underperform (UP): Stock will trail the performance of the relevant index by more than 10 pp

Coverage Suspended: Coverage of a company under the Autonomous research brand has been suspended. Ratings and price targets are suspended temporarily, are no longer current, and should therefore not be relied upon.

Not Rated: A rating assigned when the stock cannot be accurately valued, or the performance of the company accurately predicted, at the present time. The covering analyst may continue to publish research reports on the company to update investors on events and developments.

Those denoted as 'Feature' (e.g., Feature Outperform FOP, Feature Under Outperform FUP) are our core ideas.

Not Covered (NC) denotes companies that are not under coverage.

Autonomous brand common stock ratings are based on a 12-month time horizon.

Autonomous brand – preferred stocks

The Autonomous brand has three categories of preferred stock ratings:

- Outperform (OP): The total return of the preferred instrument is expected to outperform preferred securities of other issuers operating in similar sectors or rating categories over the next six months.
- Neutral (N): The total return of the preferred instrument is expected to perform in line with preferred securities of other issuers operating in similar sectors or rating categories over the next six months.
- Underperform (UP): The total return of the preferred instrument is expected to underperform preferred securities of other issuers operating in similar sectors or rating categories over the next six months.

Autonomous preferred stock ratings are based on a 6-month time horizon.

AUTONOMOUS CREDIT RESEARCH

Where this report contains investment recommendations for credit instruments, as defined in article 3(1)(35) of the Market Abuse Regulation, the information below is presented to comply with its disclosure requirements.

The report may also include reference(s) to published opinions by other Autonomous or Bernstein analysts covering the equity securities of the issuer(s) referenced herein. Please note an investment recommendation for credit instruments published by the author(s) of this report may differ from the published view of the analyst covering equity securities for the issuer(s) contained in this report and vice versa.

CREDIT RATINGS DEFINITIONS

The Autonomous brand has three categories of credit ratings:

- Credit Outperform (C-OP): The total return of the Reference Credit Instrument is expected to outperform the credit spread of bonds of other issuers operating in similar sectors or rating categories over the next six months.

- Credit Neutral (C-N): The total return of the Reference Credit Instrument is expected to perform in line with the credit spread of bonds of other issuers operating in similar sectors or rating categories over the next six months.
- Credit Underperform (C-UP): The total return of the Reference Credit Instrument is expected to underperform the credit spread of bonds of other issuers operating in similar sectors or rating categories over the next six months.

Autonomous credit ratings are based on a 6-month time horizon.

A list of all investment recommendations produced by the author(s) of this report alongside credit ratings history are available upon request.
