

TSMC

Rising confidence in AI demand, matched by increasing capex plans; Raise PT to NT\$3200

We came away from TSMC's 2Q26 earnings conference incrementally more confident on the sustainability of Datacenter AI demand, the company's commitment to continue investing strongly to narrow the large supply-demand gap in leading edge, and believe that the company's competitive edge is intact, despite rising competitive noise. Near-term GMs may have been slightly disappointing vs. market expectations, but we believe that GMs should stay on a slowly upward sloping curve once N2 dilution winds down, due to price increases, better operating efficiency and continued high utilization. We raise our FY26/27/28 EPS ests by 4%/2%/6% to reflect faster revenue growth due to stronger AI demand and faster capacity growth, and remain OW with our Jun-27 PT raised to NT\$3200 (20x 12m forward earnings). In the near-term, concerns over the AI investment cycle duration is likely to dominate investor discussions, and we think more assurance on capex growth into 2027 from key hyperscalers in the upcoming 2Q earnings season would be a key catalyst for the stock.

- Increased confidence in AI demand, visibility into 2029-30:** TSMC management indicated rising confidence in AI demand growth and sustainability, with visibility now extending into 2029-30, based on customer and end customer (hyperscalers/ AI Labs) deployment timelines and product roadmap. We believe that TSMC is likely to raise its Datacenter AI CAGR expectations in the next couple of quarters (JPMe 69% from 2024-29E, see Table 1), to reflect stronger demand growth in accelerators and likely to include new categories like agentic AI CPUs. With increasing competition among frontier AI models in the last 1-2 months, we believe that aggregate AI datacenter capex should continue to grow strongly, driving incremental demand for AI compute. In addition, scaling laws continue to improve model capabilities every 6-12 months, which should drive higher TAM and increased investments.
- TSMC accelerating capacity expansion further; we raise capex to \$81/\$90 bn in FY27/28:** TSMC management appears to now be fully invested in supporting incremental AI demand and determined to leave limited room for emerging competition. We are raising our FY26/27/28 capex to \$62/\$81/\$90 bn, to reflect the strong buildout plans for N2, N3 and advanced packaging and expect leading edge capacity (N5 and below) to grow at 24% CAGR from 2026-28, much faster than prior years. In addition, TSMC has indicated an additional \$100bn capex commitment in Arizona (total \$265bn since start), even though this latest tranche is unlikely to commence before the 2029-30 timeframe.
- Clear messaging around competition, on leading edge, mature tech and packaging:** TSMC's messaging around various facets of competition is very clear, in our view. For leading edge process, TSMC continued to highlight long-term customer partnerships, the importance of leading technology, capacity, IP portfolio readiness and trust as key longstanding moats that are hard for competitors to overcome. For mature Tech, TSMC has been quite forceful in communicating that its overall mature foundry capacity is still growing (unlike the recent industry / market narrative of meaningful shrinkage). On advanced packaging, TSMC's stance is more accommodating

Summary Investment Thesis and Valuation

Investment Thesis

We are OW on TSMC, given the increased confidence in AI demand, along with an aggressive capex plan ahead. We believe AI demand visibility is extended to 2029/30 due to the solid accelerator product line-up in the coming years. In response, the company is also accelerating its capacity plan further in order to capture incremental AI demand and leave limited room for potential competition. We believe TSMC's leading industry position is intact with its leading-edge process technology remaining ahead of its peers and its mature nodes continuing to grow with a focus on high value segments. For GMs, we believe it should stay on a slowly upward sloping curve once N2 dilution winds down, due to price increases, better operating efficiency and continued high utilization.

Valuation

Our Jun-27 PT of NT\$3,200 (previously NT\$3,100) is based on ~20x 12-month forward P/E and reflects strong revenue growth from stronger AI demand and faster capacity growth. Our target multiple is higher than TSMC's five-year average historical multiple.

of emerging competitors such as EMIB-T from Intel, which is understandable given TSMC itself is outsourcing to OSATs and views packaging as an enabler for leading edge wafer sales. We believe that TSMC should retain 95+% share in the first two waves of N2/A16 demand, and current progress in A14 (likely revenues in 2029) should keep it well ahead of Intel and Samsung Foundry. Once TSMC's capacity ramp materializes in 2028 and the supply-demand gap narrows, we believe the foundry competition narrative is also likely to diminish, similar to past upcycles.

- **In the long-term, gross margins will take care of themselves:** In the near-term, there has been some disappointment from investors on limited gross margin upside and lack of GM uptick in 2H26 (mainly from N2 dilution). We believe that GMs are likely to stay in the high 60% range and should maintain an overall upward sloping curve over the next several years. We expect TSMC to see steady increases in pricing, while capacity conversions and cross Fab collaboration should bring increased operating efficiency and higher utilization across multiple nodes, which should help drive a better cost structure. Overseas dilution will remain a drag, but better process maturity at N2 should limit the extent of GM drag once the process ramps up to economic scale.

Increased confidence in AI demand, visibility into 2029-30

TSMC indicated rising confidence in the growth and sustainability of AI demand, noting that AI demand should extend into 2029–30, supported by a more positive outlook and better visibility into deployment timelines and the multiple product roadmaps from its customers and end customers (hyperscalers and AI labs).

While TSMC did not provide an updated datacenter AI revenue forecast (TSMC had guided to a mid-to-high-50% DC AI CAGR from 2024–2029E on its 1Q26 earnings call), it highlighted that the datacenter AI revenue CAGR is now tracking stronger than its prior estimate. As such, we believe TSMC is likely to raise its datacenter AI CAGR guidance over the next few quarters (JPMe datacenter AI CAGR of 69% from 2024–29E), driven by both stronger demand growth in AI accelerators and a sharp CPU ramp, underpinned by rising agentic AI adoption.

Given the ongoing competition among frontier AI models over the past one to two months (GPT-5.6, Claude Fable 5 and Opus 4.8, Gemini 3.5 Pro, etc.), we expect aggregate AI datacenter capex to keep growing strongly (JPMe Top 4 US CSP capex up 80%/50% YoY in 2026/2027) on incremental demand for AI compute. We expect further AI TAM expansion and investment to provide upside for TSMC, as scaling laws continue to improve model capabilities every 6–12 months.

TSMC accelerating capacity expansion further; we raise capex to \$81bn/\$90bn in 2027/28

TSMC management raised its capex guidance to \$60-64bn in 2026 (vs. prior \$52-56bn), showcasing its commitment to supporting incremental AI demand and determination to leave limited room for emerging competition. With multiple new fabs commencing construction in 1H26 and increasing equipment orders placed from 2Q26 onwards, we are raising our FY26/27/28 capex to \$62bn/\$81bn/\$90bn. We believe the elevated capex will be mainly spent on the strong buildout plans for N2 and N3, advanced packaging, and we expect leading edge capacity (N5 and below) to grow at 24% CAGR from 2026-28, much faster than prior years.

Figure 3: TSMC capex trend

US\$bn / %

Source: Company data, J.P. Morgan estimates.

For N2, we now expect our N2 node capacity to reach 60k/118k/177k wfpw in 2026/27/28, mainly driven by 9 fab phases coming online in the next 3 years (1-2 phases in Fab 20, 5+ phases in Fab 22, and 1 phase in AZ P3), with eventual capacity approaching 240-250k wfpw by 2029-30. We believe this strong ramp is largely supported by a robust N2 project pipeline ahead, such as all Apple iPhone models (A20/A20 Pro), AMD Venice and MI450, flagship SoCs from MediaTek and Qualcomm, followed by some major AI accelerators (we believe Google TPU, NVIDIA Feynman, and Trainium 4).

Figure 4: TSMC N2 YE capacity build and revenues

Source: J.P. Morgan estimates, Company data.

For N3, TSMC reiterated its 3 additional N3 fabs (in Taiwan, Japan and US), with continued cross-node conversion (from N5 to N3) in Taiwan and productivity optimization from cross-fab collaboration (N7, N5 and N3), in response to strong leading edge demand from AI applications. We now expect N3 capacity to reach 178k/223k/243kwfp by the end of 2026/27/28.

Figure 5: TSMC N3 YE capacity build and revenues

Source: J.P. Morgan estimates, Company data.

Beyond foundries, TSMC also saw very tight supply in the advanced packaging space, with continued efforts on expanding its own capacity in addition to increased outsourcing trends to OSATs (like ASE and Amkor) for CoWoS-R and CoWoS-L with smaller reticle size. Given the solid upside from AI accelerators and resurgence of CPU demand from agentic AI, we believe CoWoS capacity will also grow 60+% YoY in 2027, reaching 2M wafers annually.

Figure 6: CoWoS capacity – TSMC/non-TSMC

Source: J.P. Morgan estimates, Company data.

TSMC also announced an additional \$100bn investment in Arizona (total \$265bn cumulative investment so far), while this latest investment budget is likely to kick off after the 2029-30 timeframe, in our view. TSMC will also add ~13 leading-edge and advanced packaging fabs in Taiwan in the next several years, with Taiwan remaining the biggest manufacturing base for leading-edge capacity.

Clear messaging around competition, on leading edge, mature tech and packaging

TSMC's messaging around various facets of competition was quite clear, in our view.

On leading-edge process, TSMC continued to highlight long-term customer partnerships and the importance of technology leadership, capacity, IP, and trust as longstanding moats that are difficult for competitors to replicate, emphasizing that enabling a new technology requires 5–6 years with "no shortcuts."

On mature technology, TSMC was forceful in communicating that its overall mature foundry capacity is still growing—contrary to recent industry narratives of meaningful shrinkage—with expansion focused on high-value-add specialty nodes, and emphasized that its capacity is sufficient to meet client demand. In addition, management noted that current mature-node tightness is limited to AI peripherals (e.g., PMICs, sensors, interposers), while other applications are not experiencing shortages given weak CE demand dragged by memory price hikes.

On advanced packaging, TSMC took a more accommodating stance toward emerging competitors such as Intel's EMIB-T, which is understandable given TSMC itself is outsourcing to OSATs. Management does not view advanced packaging as a gateway for competitors to penetrate its front-end business; rather, TSMC sees various packaging solutions as enablers for TSMC leading-edge wafer sales. We believe TPU v9 (Humufish) will be the primary project adopting EMIB-T, while others like Trainium will likely use EMIB-T in smaller volumes. OSAT CoWoS-like solutions are also gaining traction in projects such as AI CPUs (AMD Venice, NVIDIA Vera). Additionally, we believe orders will flow back to TSMC as the industry migrates to 3D packaging, given Intel's Foveros Direct remains at a very early stage of ramp relative to TSMC's more mature SoIC platform.

We believe TSMC should retain 95%+ share in the first two waves of N2, and current progress on A14 (likely revenue contribution in 2029) should keep it well ahead of Intel and Samsung Foundry. Once TSMC's capacity ramp materializes in 2028, we expect the foundry competition narrative to diminish, as it has in prior upcycles.

Figure 7: CoWoS vs. EMIB comparison

	CoWoS	EMIB
Reticle size limit	5.5-6x currently; aim to reach 14x	10-12x
Cost	\$10-12k	30-40% cheaper per package as compared to CoWoS-L
Yield	98+%	~90% for server CPU size EMIB-T packages (2-4x reticle size and 4-8 EMIB bridges) ~60% for large ASIC EMIB-T packages (9-10x reticle size and 25+ EMIB bridges)
Scale (wfpn)	127K/210K/275K by YE26/27/28	Intel's external EMIB packaging capacity is likely ~7-10% of CoWoS scale in 2028.

Source: J.P. Morgan estimates, Company data.

Table 2: TSMC vs. Intel Leading Edge Capacity

k wfpn

Foundry/Node (k wfpn)	2025	2026E	2027E	2028E
Intel 18A	-	30	55-60	80k for 18A + 14A
TSMC N3+N2	133	238	342	420
TSMC N5+N3+N2	277	362	462	530

Capacity is as of year end

Source: J.P. Morgan estimates, Company data.

In the long-term, gross margins will take care of themselves

TSMC reported 2Q26 GM of 67.7%, beating the high-end of its previous guidance (67.5%). However, 3Q GM is guided at 65-67%, implying a ~170bps QoQ decline at the midpoint, primarily due to the N2 ramp.

In the near-term, there has been some disappointment from investors on limited gross margin upside and lack of GM uptick in 2H26 (largely reflecting N2 dilution). That said, we expect GMs to stay in the high-60% range and maintain an overall upward trajectory over the next several years. Overseas dilution will remain a drag, but improving N2 process maturity should contain the extent of dilution once volumes reach economic scale. We now model GM at 66.9%/67.5%/68.7% in 2026/27/28.

Figure 8: GM trend by quarters

Source: J.P. Morgan estimates, Company data.

This view is supported by: 1) steady pricing increases (we expect 8-10% hikes for N3 and N2 in 2027, with milder increases possible for N5/N7 and CoWoS); 2) capacity conversions (e.g., N5 to N3) and cross-fab collaboration (leveraging back-end metal layers at N7, N12, and 28nm for N5/N3 processes), which should improve operating efficiency and drive higher utilization across multiple nodes—we expect sustained 100%+ UTR at N5/N3 and N2 to last at least through 2028; and 3) N3 (30% revenue in 2Q26) is likely to cross corporate-average GM in 2H26.

2Q26 Earnings Call Highlights

2Q26 Earnings Call Highlights

2Q26 recap

- Revenue \$40.2bn, up 12% QoQ in USD terms, driven by strong demand from leading-edge
- GM 67.7%, +1.5ppt QoQ, driven by cost improvement and higher UTR, partially offset by overseas fab
- OPM 60.3%, +2.2ppt QoQ
- EPS: NT\$27.25
- ROE: 45.9%
- Shipments: 4,336 kpcs, +3.9% QoQ,
- FX: NT\$31.6
- Capex: NT\$496bn (US\$15.7bn)
- Inventory days increased 7 days to 87 days in 2Q due to N2 ramp

Revenue mix by process

- N2: 3% of sales
- N3: 30% of sales
- N5: 33% of sales
- N7: 11% of sales
- Adv tech 7nm below – 77% of wafer sales

Revenue mix by platform

- HPC up 20% QoQ (66% of sales)
- Smartphone down 4% QoQ (22% of sales)
- IoT +4% QoQ (5% of sales)
- Auto +15% QoQ (4% of sales)
- DCE +5% QoQ (1% of sales)

3Q26 outlook

- Revenue US\$44.6-45.8bn, up 12% QoQ or 37% YoY at midpoint, supported by strong demand from leading edge (including ramp in N2), seeing CE and price sensitive mkt being challenged due to macro uncertainty and component price hikes
- GM 65-67%, decrease 1.7ppt at midpoint, driven by steep ramp up of N2 (3-4% dilution partially offset by strong demand from leading edge and cost improvement from productivity and cross node optimization)
- OPM: 56-58%
- FX: NT\$32

2026 outlook

- AI-related demand remains strong and robust
- Customers and customers' customers (CSP) – providing strong signals and positive outlook
- Robust multi-year mega-trend for AI – conviction very high
- 2026 Rev to be slightly above 40% YoY in USD terms
- AI continues to be dynamic, agentic AI leading to a resurgence for CPU and thus driving more Si demand besides AI accelerators
 - No matter the CPU architecture, they are almost all TSMC's customers – collaborating closely to capture Agentic AI opps.

2026 capex

- Capex highly correlated to higher growth opportunities, TSMC is well positioned to capture opportunities from 5G, AI, and HPC
- Raise capex to \$60-64bn in 2026 (vs. prev guidance of \$52-56bn)
- Not foreseeing bottleneck to our expansion plan
 - Advanced nodes – 70-80%
 - Specialty nodes – 10%
 - Advanced packaging (AP), testing, mask making, and others - 10-20%
- Given the fundamental complexity of leading edge, design in and lead time, TSMC having a very good idea of the product roadmap and production plan – takes more than 5 years to prep the capacity and ramp up, TSMC has a disciplined capacity expansion plan
- Add another US\$100bn investment in AZ – for building several wafer fabs for N2 and below as well as AP fabs for strong multi-year demand from our US customers
- Will build 13 leading-edge fabs and AP fabs in TW in the next several years

Dilution

- N2 – diluting 3-4% in 2H26
- Overseas fab ramps – diluting 2-3% in early stage and 3-4% in later stage
- Leading edge demand very strong while FX might be another factor

Dividends

- 2025 - paid NT\$467 bn, +28.6% YoY; NT\$18 per share
- 2026- NT\$24 per share - up 33% YoY – exp continue and increase div in 2027

N3

- 3 additional N3 fabs - 1 in TW, 1 in AZ, 1 in JP to support multi-year demand
- Continue to convert N5 to support N3 in TW
- Optimizing productivity across all fabs in all locations to generate more output, and

optimize cross node collaboration (N5 N7 and N3)

- Using all levers to maximize our support to customers

Mature node

- Strategy unchanged, continue to increase capacity in higher value segments
 - like JASM fab 1 for CMOS and image sensor and ESMC for auto and industry
- Outside of PMIC and CMOS, other areas are not as strong – will focus on high value segment and ensure necessary capacity to support customer growth

A14

- Lead time to develop A14 - building capacity and ramp takes 5-7yrs – no shortcut
- Featuring second gen nanosheet transistor structure
- Deliver full node stride from N2, power benefit to address in high performance and efficient power compute, vs. N2, 10-15% higher improvement in speed at the same power, 25-30% power improvement at the same speed, close to 20% chip density gains
 - Internal product light vehicle demo ~90% device performance and close to 90% 256 Mbits SRAM
 - Seeing strong customer engagement from SP and HPC
 - Tape out activity is ongoing and ahead of schedule
- Schedule on track and progressing well, pre-production in 2027, 2028 MP
- A13 and A12 as an extension to the A14 family
 - A13 achieving >6% die area vs. A14, via 97% optical shrink, driving further performance and power efficiency
 - A12 will bring SPR to A14 platform for better performance and power benefits
 - Both target MP in 2029
- A14 family should be long lasting and larger node vs. N2 (like N2 vs. N3)

Q&A

Capex – how aggressive can TSMC be on capex beyond 2026, capex guidance in the coming 3 yrs?

- No number to share
- Invest for future opp – not hesitant to invest
- Still have conviction on AI multi-year mega-trend
- Last time said next 3 yrs will be higher than last 3 yrs capex – now should be even more significantly higher
- US plan
 - Schedule depends on mkt situation

- Mega trend very strong – so we announce another \$100bn investment in US
- Many fabs – additional 4 fabs to be built (incl. FE + BE)

Competition – how to address competition from US (with policy support)/KR (making a lot of money)?

- KR – making a lot of money, attractive environment
- US – having US gov support, we also have it
- No shortcuts – need to go back to fundamentals, a lot of money is nice to have, but 1) tech, 2) manufacturing (mfg) and 3) customer trust never change – always most important recipe for TSMC to win orders
- Choosing tech partners has no shortcut – need to understand the tech and work together and ramp up – takes ~5yrs

AI CAGR – demand and definition of AI accelerators for TSMC's growth

- Continue to invest more with good reasons
- AI CAGR no number – stronger than before – no number because it continues to increase

AP – EMIB competition

- AP capacity is so tight – limiting TSMC's customer growth
- Welcome additional flexibility in the mkt – helping our FE business for TSMC
- Tech looks good – hope they are successful to share our loading
- We are working very hard to add capacity on BE
- If EMIB has some problems, do we have an alternative plan?
 - We need to support customer success – which is our priority

Capex – philosophy of expanding capacity considers competitive pressure? Chip availability due to DC and power capacity delay?

- We do consider competition – seeing where we are with bottom up and top down views
- Putting all the narratives from customers together is not the truth
 - All customers are aggressive
- Increase to \$60-64bn capex – big money so we do it carefully
- Making sure we deliver chips, checking AI DC progress with buildings, locations, and demand – making sure our chips are not going into inventory

S/D – still running short of supply in 2027

- Going to 2029-30 – demand is very strong
- Not sure if there is a dip in between
- Seeing a new industry called AI industry – so common in daily life affecting Auto robotics and all industries
- Demand will be there where the fundamental is the chip from TSMC

Profitability – foundry LT value should be better? What is the pricing/GM strategy for TSMC?

- Higher the better
- We are partners – customers need to be successful, do not want to squeeze them out, will not surprise them with 4-5x prices all of the sudden
- We earn our value and make sure such margin is enough for LT expansion
- We are very trustable

Risk – customer concentration, worry too many big customers

- Not our concern
- Some customers growing very fast and getting bigger – we are happy
- A lot of new players in the AI industry

Customer strategy – helping to invest in the customer, is TSMC having this approach to invest in your customers?

- Every company has diff strategy – no financial arrangements for TSMC for now
- We use our current model smoothly and successfully

US investment – timeline for additional \$100bn

- Progress – mostly dependent on mkt situation and customer demand
- No firm schedule – but we have plan
- We try to speed it up as fast as possible
- Try to bring new fabs and facilities in TW/JP as well - as fast as possible
 - S/D gap is so big – try to narrow it

COUPE – when to have meaningful contribution

- Start production right now
- Will ramp up – given AI DC needs to lower power consumption but increase bandwidth
 - Will continue to increase and as a key tech for the next few yrs

AI – different chips (GPU and CPU etc) growth potential

- No specific number – all of them are in TSMC using leading edge
- Working with customers to allocate the wafer for GPU CPU XPU

AP –tech progress on glass core substrate and carriers?

- Majority still CoWoS
- Developing alternatives to lower the cost
- Progress – building a product line and need another 1yr to be mature to put into production for our customers

Outlook – rev/capex growth outlook for the next few years; key drivers for capex and sales growth

- Rev corresponding with our investment
- Next few years – should be good biz for TSMC
- Key drivers – all AI-related

AP – EMIB-T competition a gateway to more FE competition threat?

- FE and BE are diff things
- Our capacity in BE is very tight – gap is bigger – welcome competitor to provide flexibility, helping our FE biz

High NA – tech adoption

- Field size for high NA is only one half and put that into our consideration of manufacturing cost
- High NA is a good tool with high performance
- Working with ASML to try to make it more suitable for manufacturing in terms of cost and maturity

S/D - how big is the gap

- Gap is very big – no specific number
- Don't want to comment on memory makers

Capacity growth – mentioned CAGR for N2 (70% in 2026-28) and N3 (25% in 2022-27), still the same?

- Now is bigger

Capex –how much capex going to AP alone? Capital intensity vs. FE?

- Try very hard to keep flexibility between FE and BE – sometimes having bottleneck in FE sometimes putting more money on bottleneck tools
- LT – BE is about 10-20% (big range)
- Still 10-20% - as time goes by, customers might need more testers (in shortage), then we need to put more capex in it

Capex – what upside diff vs. 6M before for the revision?

- Given demand continues to increase – TSMC feels the pressure to increase our capacity
- Inflation – buying tools with inflated prices

Mature node – SD dynamics and pricing

- Covering diff segments – only ones related to AI are in shortage (like PMIC – all DC need a lot of power mgmt., like .18micron or 90nm) and sensors (need sensors to detect environmental info to put into DC to analyze)
- CE is not in high demand – other segments are not that strong and not in a lot of shortage – not at all

Investment Thesis, Valuation and Risks

TSMC (*Overweight; Price Target: NT\$3200.0*)

Investment Thesis

We are OW on TSMC, given the increased confidence in AI demand, along with an aggressive capex plan ahead. We believe AI demand visibility is extended to 2029/30 due to the solid accelerator product line-up in the coming years. In response, the company is also accelerating its capacity plan further in order to capture incremental AI demand and leave limited room for potential competition. We believe TSMC's leading industry position is intact with its leading-edge process technology remaining ahead of its peers and its mature nodes continuing to grow with a focus on high value segments. For GMs, we believe it should stay on a slowly upward sloping curve once N2 dilution winds down, due to price increases, better operating efficiency and continued high utilization.

Valuation

Our Jun-27 PT of NT\$3,200 is based on ~20x 12-month forward P/E and reflects strong revenue growth from stronger AI demand and faster capacity growth. Our target multiple is higher than TSMC's five-year average historical multiple.

Risks to Rating and Price Target

Key downside risks to our rating and price target include: (1) the debate on the duration of the AI capex growth cycle and (2) any negative impact from weak PC/Smartphone demand in 2H26.

TSMC: Summary of Financials

Analyst Certification: The Research Analyst(s) denoted by an “AC” on the cover of this report certifies (or, where multiple Research Analysts are primarily responsible for this report, the Research Analyst denoted by an “AC” on the cover or within the document individually certifies, with respect to each security or issuer that the Research Analyst covers in this research) that: (1) all of the views expressed in this report accurately reflect the Research Analyst’s personal views about any and all of the subject securities or issuers; and (2) no part of any of the Research Analyst’s compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the Research Analyst(s) in this report. For all Korea-based Research Analysts listed on the front cover, if applicable, they also certify, as per KOFIA requirements, that the Research Analyst’s analysis was made in good faith and that the views reflect the Research Analyst’s own opinion, without undue influence or intervention.

All authors named within this report are Research Analysts who produce independent research unless otherwise specified. In Europe, Sector Specialists (Sales and Trading) may be shown on this report as contacts but are not authors of the report or part of the Research Department.

Important Disclosures

- **Market Maker/ Liquidity Provider:** J.P. Morgan is a market maker and/or liquidity provider in the financial instruments of/related to TSMC or related entities.
- **Analyst Position:** An analyst on the Equity or Credit coverage team, non-fundamental analyst who may produce trade recommendations, or a member of their respective household(s) has a financial interest in the debt or equity securities of TSMC or related entities.
- **Beneficial Ownership (1% or more):** J.P. Morgan beneficially owns 1% or more of a class of common equity securities of TSMC or related entities.
- **Client:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients: TSMC or related entities.
- **Client/Non-Investment Banking, Securities-Related:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients, and the services provided were non-investment-banking, securities-related: TSMC or related entities.
- **Client/Non-Securities-Related:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients, and the services provided were non-securities-related: TSMC or related entities.
- **Potential Investment Banking Compensation:** J.P. Morgan expects to receive, or intends to seek, compensation for investment banking services in the next three months from TSMC or related entities.
- **Non-Investment Banking Compensation Received:** J.P. Morgan has received compensation in the past 12 months for products or services other than investment banking from TSMC or related entities.
- **Debt Position:** J.P. Morgan may hold a position in the debt securities of TSMC or related entities, if any.

Company-Specific Disclosures: J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Important disclosures, including price charts and credit opinion history tables (if applicable), are available for compendium reports and all J.P. Morgan–covered companies, and certain non-covered companies, by visiting <https://www.jpmm.com/research/disclosures>, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe). NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/performance in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, <https://www.jpmorganmarkets.com>.

Coverage Universe: Hariharan, Gokul : ASE Technology Holding Co Ltd (3711.TW), ASMPT Ltd (0522) (0522.HK), AirTAC (1590.TW), Alchip Technologies (3661.TW), Chipbond Technology (6147.TWO), GDS Holdings (GDS), GUC (3443.TW), Hiwin (2049.TW), Hon Hai Precision (2317.TW), MediaTek Inc. (2454.TW), Nien Made (8464.TW), Novatek Microelectronics Corp. (3034.TW), Powerchip Semiconductor Manufacturing Corp. (6770.TWO), SMIC (0981) (0981.HK), Silicon Motion (SIMO), Sinbon (3023.TW), TSMC (2330.TW), Teco Electric & Machinery (1504.TW), UMC (2303.TW), Vanguard International Semiconductor Corp. (5347.TWO), Voltron Power Technology (6409.TW), Xiaomi (1810) (1810.HK)

J.P. Morgan Equity Research Ratings Distribution, as of July 04, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	36%	12%
IB clients**	83%	80%	73%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	92%	87%

*Please note that the percentages may not add to 100% because of rounding.

**Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.

For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies,

please see the most recent company-specific research report at <http://www.jpmorganmarkets.com>, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, <http://www.jpmorganmarkets.com>. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of <http://www.jpmorganmarkets.com> where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to [UK MIFID Research Unbundling exemption](#) for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.

Confidentiality and Security Notice: This transmission may contain information that is privileged, confidential, legally privileged, and/or exempt from disclosure under applicable law. If you are not the intended recipient, you are hereby notified that any disclosure, copying, distribution, or use of the information contained herein (including any reliance thereon) is STRICTLY PROHIBITED. Although this transmission and any attachments are believed to be free of any virus or other defect that might affect any computer system into which it is received and opened, it is the responsibility of the recipient to ensure that it is virus free and no responsibility is accepted by JPMorgan Chase & Co., its subsidiaries and affiliates, as applicable, for any loss or damage arising in any way from its use. If you received this transmission in error, please immediately contact the sender and destroy the material in its entirety, whether in electronic or hard copy format.
