CCL: Fresh concerns about structural demand & content growth seem overdone

Equities
Electronic Equipment & Instruments

Taiwan

- ◆ Expect high-end copper-clad laminates (CCL) use to further rise, even with gradual adoption of co-packaged optics (CPO)
- ◆ Oversupply unlikely, with expansion backed by product roadmaps and customer commitments
- ◆ Demand thesis intact; retain Buy ratings on EMC, TUC

Recent concerns on CCL demand appear overblown: Concerns have surfaced following recent market speculation that CPO adoption over the next few years could structurally erode demand and content growth for high-end CCL. Here we address some key concerns to demonstrate why we remain bullish about the high-end CCL sector.

Full shift to CPO theoretically works but should have limited near- to mid-term effect on CCL: Concern centers on when AI servers fully shift to CPO, which moves the optical engine onto the same package as the ASIC. Under this architecture, the signal is converted into optical signals without the traditional signal loss issue and, thus, the system does not require high-end CCL (e.g., the M8/M9 grade, which has better dissipation factor performance). Theoretically, the final form of CPO raises the terminal value question of CCL if considering only signal integrity, but CPO adoption remains gradual as multiple challenges remain in terms of its reliability, cost, and ecosystem. As a result, we expect demand from GPU/ASIC compute trays, scale-up networking, and PCIe Gen6/7 to continue to rise regardless of CPO, and that 224G over copper will continue driving usage of not only high-end CCL but also upstream material such as copper and glass fiber.

CPO should increase the requirement for PCB/CCL: Following the discussion above, concern is surrounded by the potential spec of the PCB, that only low-speed-control signals such as PCIe Gen 5 would remain on the motherboard, and CCL at the M4 grade would be enough. We disagree with that logic for two key reasons. (1) As we have previously highlighted, the adoption of PCIe Gen 6 this year has already led to migration of the M6-M7 grade of CCL. (2) Even with adoption of CPO, there would be new requirements for PCB/CCL along with an increasing layer count, such as heat endurance (CTE) and barrel cracking resistance.

We do not expect the CCL industry to turn oversupplied, even as we estimate 19% capacity increases in FY27/FY28: Multiple applications like AI, low-earth-orbit satellite (LEO), and general servers all help to drive CCL demand, while top-tier CCL makers' aggressive capacity plans are supported by leading customers' product roadmaps and commitments, in our view. As a result, we still like the CCL space, especially companies that continue to benefit from high-end CCL orders and product mix improvement, namely EMC and TUC, both Buy-rated.

Exhibit 1: CCL supplier capacity expansion

Source: Company data, HSBC estimates

EMC (2383 TT): maintain Buy rating, TWD7,995 TP

Valuation: Our target price of TWD7,995.00 is based on a PE of 30x and 2027e EPS of TWD266.44. We believe 30x, which is higher than +1 STDV above the historical five-year average of 20x, is justified given EMC's leadership in multiple AI projects and high-end CCL solutions, supported by its capacity expansion and material procurement. With c70% implied upside, we maintain a Buy rating on EMC as we believe the company should benefit from the ongoing AI trend.

Downside risks: (1) slower AI demand growth, (2) potential spec downgrade in AI projects, (3) design changes at major smartphone customers, and (4) market share loss.

TUC (6274 TT): maintain Buy, TWD3,000 TP

Valuation: Our TP of TWD3,000.00 is based on a target PE of 30x applied to our 2027e EPS of TWD100.07. We believe our target PE of 30x is justified by TUC's increasing exposure to AI applications and stronger top-line growth trajectory which should drive rerating. Our target PE multiple of 30x aligns with industry leader EMC, which we view as reasonable given our expectation that TUC's gross margin will catch up to EMC (HSBCe 38.9%), reaching 39.1% in 2027e. We retain our Buy rating as our TP implies c127% upside and TUC remains uniquely positioned to capitalize on growing high-end CCL adoption driven by secular AI trends, sustained order overflow, and an ongoing pricing upcycle.

Downside risks: (1) slower AI demand growth, (2) potential spec downgrade in AI projects, (3) fierce price competition among CCL peers for mainstream products, and (4) market share loss.

Analyst Certification

The following analyst(s), economist(s), or strategist(s) who is(are) primarily responsible for this report, including any analyst(s) whose name(s) appear(s) as author of an individual section or sections of the report and any analyst(s) named as the covering analyst(s) of a subsidiary company in a sum-of-the-parts valuation certifies(y) that the opinion(s) on the subject security(ies) or issuer(s), any views or forecasts expressed in the section(s) of which such individual(s) is(are) named as author(s), and any other views or forecasts expressed herein, including any views expressed on the back page of the research report, accurately reflect their personal view(s) and that no part of their compensation was, is or will be directly or indirectly related to the specific recommendation(s) or views contained in this research report: Ted Lin

Important disclosures

Equities: Stock ratings and basis for financial analysis

HSBC and its affiliates, including the issuer of this report ("HSBC") believes an investor's decision to buy or sell a stock should depend on individual circumstances such as the investor's existing holdings, risk tolerance and other considerations and that investors utilise various disciplines and investment horizons when making investment decisions. Ratings should not be used or relied on in isolation as investment advice. Different securities firms use a variety of ratings terms as well as different rating systems to describe their recommendations and therefore investors should carefully read the definitions of the ratings used in each research report. Further, investors should carefully read the entire research report and not infer its contents from the rating because research reports contain more complete information concerning the analysts' views and the basis for the rating.

HSBC assigns ratings on the following basis:

The target price is based on the analyst's assessment of the stock's actual current value, although we expect it to take six to 12 months for the market price to reflect this. When the target price is more than 20% above the current share price, the stock will be classified as a Buy; when it is between 5% and 20% above the current share price, the stock may be classified as a Buy or a Hold; when it is between 5% below and 5% above the current share price, the stock will be classified as a Hold; when it is between 5% and 20% below the current share price, the stock may be classified as a Hold or a Reduce; and when it is more than 20% below the current share price, the stock will be classified as a Reduce.

Our ratings are re-calibrated against these bands at the time of any 'material change' (initiation or resumption of coverage, change in target price or estimates).

Upside/Downside is the percentage difference between the target price and the share price.

Rating distribution for long-term investment opportunities

As of 30 June 2026, the distribution of all independent ratings published by HSBC is as follows:

Buy	61%	(13% of these provided with Investment Banking Services in the past 12 months)
Hold	34%	(10% of these provided with Investment Banking Services in the past 12 months)
Sell	5%	(8% of these provided with Investment Banking Services in the past 12 months)

For the purposes of the distribution above the following mapping structure is used during the transition from the previous to current rating models: under our previous model, Overweight = Buy, Neutral = Hold and Underweight = Sell; under our current model Buy = Buy, Hold = Hold and Reduce = Sell. For rating definitions under both models, please see "Stock ratings and basis for financial analysis" above.

For the distribution of non-independent ratings published by HSBC, please see the disclosure page available at <http://www.hsbcnet.com/gbm/financial-regulation/investment-recommendations-disclosures>.

HSBC and its affiliates will from time to time sell to and buy from customers the securities/instruments, both equity and debt (including derivatives) of companies covered in HSBC Research on a principal or agency basis or act as a market maker or liquidity provider in the securities/instruments mentioned in this report.

Analysts, economists, and strategists are paid in part by reference to the profitability of HSBC which includes investment banking, sales & trading, and principal trading revenues.

Whether, or in what time frame, an update of this analysis will be published is not determined in advance.

Non-U.S. analysts may not be associated persons of HSBC Securities (USA) Inc, and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with the subject company, public appearances and trading securities held by the analysts.

Economic sanctions laws imposed by certain jurisdictions such as the US, the EU, the UK, and others, may prohibit persons subject to those laws from making certain types of investments, including by transacting or dealing in securities of particular issuers, sectors, or regions. This report does not constitute advice in relation to any such laws and should not be construed as an inducement to transact in securities in breach of such laws.

For disclosures in respect of any company mentioned in this report, please see the most recently published report on that company available at www.hsbcnet.com/research. HSBC Private Bank clients should contact their Relationship Manager for queries regarding other research reports. In order to find out more about the proprietary models used to produce this report, please contact the authoring analyst.

HSBC may use Artificial Intelligence (AI) tools approved for adoption within HSBC in the development of its research reports, utilizing these technologies to analyse large volumes of data, enhance efficiency and improve the overall user experience. This includes but is not limited to paraphrasing, developing suitable captions and supporting data visualisation. It is important to note that while AI tools assist in various aspects of report creation, all investment recommendations and opinions presented herein are formulated and approved exclusively by our research analysts. The final content of the report reflects the professional judgement and expertise of our research analysts, ensuring compliance with regulatory standards and maintaining the integrity of our research process.

Additional disclosures

- 1 This report is dated as at 18 September 2026.
- 2 All market data included in this report are dated as at close 17 September 2026, unless a different date and/or a specific time of day is indicated in the report.
- 3 HSBC has procedures in place to identify and manage any potential conflicts of interest that arise in connection with its Research business. HSBC's analysts and its other staff who are involved in the preparation and dissemination of Research operate and have a management reporting line independent of HSBC's Investment Banking business. Information Barrier procedures are in place between the Investment Banking, Principal Trading, and Research businesses to ensure that any confidential and/or price sensitive information is handled in an appropriate manner.
- 4 You are not permitted to use, for reference, any data in this document for the purpose of (i) determining the interest payable, or other sums due, under loan agreements or under other financial contracts or instruments, (ii) determining the price at which a financial instrument may be bought or sold or traded or redeemed, or the value of a financial instrument, and/or (iii) measuring the performance of a financial instrument or of an investment fund.
