CMD preview: strong execution underpins the next leg of value creation

Strong execution underpins confidence in new targets

Air Liquide will host a virtual CMD on 5 October, during which it will unveil its new four-year strategic plan & financial framework, including updated growth, margin & capital allocation ambitions, alongside a deep dive into key growth drivers such as electronics and the energy transition. We continue to view Air Liquide as one of the highest-quality compounders in our coverage universe. Importantly, management has demonstrated a strong track record of delivering on and, in most cases, exceeding its objectives set out under the 22-25 ADVANCE plan despite a volatile macro. This should lend strong credibility to the new set of targets.

Greater emphasis on shareholder returns and earnings visibility

Bloomberg recently reported that activist investor Elliott has built a stake in the company. While we do not expect this to result in a fundamental shift in strategy, risk appetite, or management's typically conservative and grounded communication style, we believe it could accelerate a greater emphasis on capital deployment and shareholder returns, while potentially encouraging management to adopt a more explicit medium-term profit growth framework. In our view, this would help investors better appreciate the group's long-term earnings potential and make the valuation case easier to underwrite.

Scenario analysis points to 25% share price upside on a 12m horizon

Growth prospects appear strong, supported by a record backlog of high-quality projects and continued margin expansion from structural efficiencies. Based on our forecasts (4.5% p.a. U/L growth & 100bps p.a. margin expansion), and including €6bn of buybacks (5.6% of market cap) and €3.5bn of acquisitions, we estimate 2030 EPS of €9.8, implying an 11.6% CAGR and 8% upside to consensus. Applying the current 26x P/E multiple and discounting back 3y implies 25% share price upside on a 12-month view (€210/share). Combined dividends & buybacks would amount to c.4% of market cap p.a., in line with Linde's 7y average, while net debt/EBITDA would remain below 1.8x, consistent with Air Liquide's history. Last but not least, the group's resilient, inflation-resistant business model is an added bonus amid heightened macroeconomic and geopolitical uncertainty. At a 23x FY27E P/E and 13x FY27E EV/EBITDA, we continue to see an attractive risk/reward. **BUY**.

CMD preview: What to expect from the new strategic framework

ADVANCE 2022-25: Strong execution despite a tough macro backdrop

Under the ADVANCE strategy (2025 vs. 2021), management targeted 5-6% average annual comparable sales growth, >160bps operating margin improvement, >30% EBITDA growth, ROCE above 10% from 2023 and €1.6bn+ of cumulative efficiencies over the four-year period. Execution has been strong across all metrics, with most of them being exceeded:

- Group comparable sales growth averaged 6.1% during the strategic period (calculated at constant 2021 energy prices and FX, and ex significant scope), reaching the upper end of the target.
- Margin delivery materially exceeded expectations, with c.360bps of expansion over 2022-25 vs. the original >160bps objective, supported by pricing discipline, operational efficiencies and portfolio management. The extension of the 100bps p.a. margin improvement target through to 2027 ahead of the CMD serves to highlight that the transformation programme represents a continuous and structural change, capable of delivering efficiencies well into the future.
- Over 2022–25, ADVANCE efficiencies totaled €1.972bn (47% of 21 recurring EBIT), exceeding the original €1.6bn target by 23.3%. In H1 26, the company delivered €299m in efficiencies, bringing cumulative efficiencies delivered since 2022 to €2.271bn.
- EBITDA growth (30%) was in line with the target (30%+) despite significant FX headwinds (a cumulative c.4% drag on group sales) and lower-than-expected organic growth.
- ROCE exceeded the 10% threshold a year ahead of schedule and has remained comfortably above it thereafter.

At the same time, Air Liquide has successfully increased investment activity, with annual industrial investment decisions currently running above €4.2bn, exceeding the €3.8bn average ADVANCE target and well above the €2.6bn average under the previous NEOS plan, while maintaining strict return criteria (typically c.12% IRR hurdles). Crucially, the company has remained selective despite an extensive opportunity set, directing capital towards high-return opportunities in electronics, healthcare, decarbonisation, and hydrogen. This disciplined approach has supported record investment backlogs while maintaining a clear focus on growth, profitability and returns.

New four-year strategic framework

We expect management to reset its growth ambition to 4–5% comparable sales growth (from 5–6% previously, DBc: 4.5%), with Electronics accelerating to 12% from 8-9% targeted previously. The company will also provide greater detail on the next, deeper phase of its transformation programme and outline a new margin trajectory. We forecast a further c.400bps of margin expansion over the four-year period, supported by efficiency gains and a small positive mechanical impact from the increasing share of more capital-intensive, tolling-based contracts. While Air Liquide's Gas & Services operating margin remains 9.4ppt below Linde's (FY25), we have previously outlined the structural factors that explain a large portion of this gap (see page 2 of our report: [Feedback from sell-side meeting with management](#) published on 21 Feb 2024). More importantly, RoCE, rather than operating margin, is the most relevant KPI for assessing value creation in industrial gases, and Air

Liquide's returns are broadly in line with Linde's (we also expect an update of the RoCE target).

We also expect the company to update its capital allocation framework, most likely formalising share buybacks as a component of shareholder returns, a possibility management has referenced on several occasions. We do not expect any change in capital allocation priorities, with organic investment remaining the primary focus, followed by inorganic expansion, but we believe the company has the financial flexibility to pursue all four levers simultaneously. We forecast capex/sales to increase to c.16% in 2028 from 14.3% in 2025 and above the previous 13-15% target range, with capex rising to more than €5bn at peak during the strategic period, compared with c.€4bn currently. Even under this base-case scenario, which also assumes a dividend payout ratio of c.60%, we forecast net debt/EBITDA declining to 0.9x by 2030.

Focus shifting from sales growth to profit growth

From 2026, the company has stopped disclosing the sales contribution from project start-ups, arguing sales are no longer the best measure of the value created by new investments as the link between backlog and sales has become less direct. This is due to two key reasons: 1) sales contributions remain heavily influenced by energy costs, which can be volatile, vary by region, and have been until now included in reported revenue (under traditional take-or-pay contracts, Air Liquide supplies the energy and contractually passes through energy costs in full to customers). 2) Many new large energy transition and electronics projects are structured differently, with customers supplying the energy, which reduces the reported sales contribution and increases capital intensity of the projects. However, it mechanically enhances profitability while delivering a similar RoCE. We therefore believe investors should focus less on sales generated by new projects and more on their earnings and returns contribution, using Air Liquide's c.12% post-tax return hurdle (before financing costs) as the key framework. The CMD should provide greater clarity on how management expects its backlog to translate into future profit growth, including the introduction of a new KPI, potentially linking growth capex to EBIT or something along those lines.

Electronics approaching a multi-year growth inflection

We also expect management to provide a deep dive into key growth drivers, notably Electronics and the energy transition.

Electronics currently accounts for c.10% of group sales, yet represents more than one-third of recent investment decisions and around 50% of the 12-month investment opportunity pipeline. Electronics project activity accelerated markedly in H1 26, with Air Liquide securing more than €1bn of carrier gas contracts across a broad range of semiconductor customers. This already represents c.1.5x the level of electronics investment decisions secured in FY25. While purely illustrative, annualising the H1 run rate would imply c.€2bn of new contracts signed in a single year. Applying an average capital intensity of 6x, midway between traditional Electronics projects (4-5x) and the more capital-intensive tolling-based contracts, we estimate these awards could ultimately support c.€330m of incremental annual revenue once fully ramped up, equivalent to around 12% of current Electronics sales.

The business is indeed approaching a significant growth inflection, driven by rising demand for carrier gases and advanced materials used in leading-edge semiconductor manufacturing. Carrier gases now account for c.50% of divisional

sales, up from 40% three years ago, and delivered close to 10% growth in 2025, although this was masked by the inherent volatility of the Equipment & Installation (E&I) business and portfolio management actions elsewhere in the division. Electronics comparable growth has already accelerated to 9.5% in Q2 26, up from low-single digits in 2025 and Q1 26, and we expect further acceleration as large projects begin ramping up from Q4 26. Project sizes continue to scale up materially, with the largest contracts increasing from around €50m a few years ago to c.€250m today. Management recently indicated that individual project values could exceed €400-500m in the coming years as the scale and complexity of semiconductor fabs continue to increase. This reflects both the increasing scale of semiconductor fabrication plants and rising demand linked to AI, digitalisation and supply-chain localisation, with investment activity particularly strong in the US, China, Southeast Asia, and Korea.

Figure 2: Electronics underlying sales growth (2005-2030E)

Source : Deutsche Bank estimates, Company Data

Figure 3: Electronic sales split by product

Source : Company Data

The **energy transition** opportunity hasn't gone: Air Liquide's 12m investment opportunity landscape is shifting, with energy transition projects now representing ~25% of total opportunities, a decrease from >40% since the Baytown project cancelation. However, multiple opportunities remain within the energy transition. Hydrogen for refining shows substantial promise, particularly in Europe, where only two countries have fully implemented relevant regulations. CO2 capture is gaining strong momentum, especially in Europe, with numerous cement projects in feasibility stages, and two having reached a final investment decision. The energy transition encompasses other product applications such as oxygen in industrial processes such as steel. China's ongoing transition from coal-fired steam generation to electricity for ASUs also represents a significant opportunity. Last but not least, we believe energy security is likely to move back to the top of governments' agendas amid ongoing geopolitical uncertainty and multiple global conflicts.

Scenario analysis (including B/S redeployment): 25% share price upside

Based on the 2027-30 assumptions mentioned above (which are reflected in our forecasts), and including €6bn of cumulative share buybacks and €3.5bn of acquisitions, we estimate 2030 EPS of €9.8, representing 8% upside to current VA consensus and implying an EPS CAGR of 11.6% (2027-30). Under this scenario, average net debt/EBITDA would remain below 1.8x throughout the period, in line

with Air Liquide's 20 year history. Applying the current P/E multiple (26x) and discounting back 3 years at 7.5% implies a 12-month forward value of €210 per share, or 25% upside from current levels.

Under this scenario, total cash returns to shareholders (dividends and share buybacks) would amount to 4% of the current market cap per annum (17% in total between 2027-2030), in line with Linde's average annual cash return of 4% since the merger (26% in total between 2019-2025).

Valuation

On our 2027 estimates, trading at a 23x P/E and 13x EV/EBITDA, the shares continue to offer an attractive risk/reward and remain one of our top chemicals picks.

Figure 4: Air Liquide valuation vs. peers

P/E	2025	2026E	2027E	2028E
Air Liquide	28.1	25.8	23.3	21.0

Record investment backlog provides strong growth underpinning

The group's investment engine continues to accelerate, with record investment decisions, backlog and 12m opportunity pipeline in H1 26. This combination provides strong visibility on future earnings growth.

Figure 9: Investment Backlog (Euro, bn)

Air Liquide Electronics 101

Air Liquide derives 10% of sales from Electronics and hold the #1 position globally with >200 carrier gas units. The division designs, manufactures and produces ultra-high-purity gases and advanced molecules for the semiconductor, flat panels and photovoltaic markets.

The business has delivered >7% average annual underlying growth since 2005 and remains one of Air Liquide's most attractive long-term growth engines. Its positioning is closely aligned with two major secular themes: technological leadership and industrial sovereignty. As governments and semiconductor manufacturers increasingly prioritize localized chip production and supply-chain resilience, Air Liquide stands to benefit from its critical role in the semiconductor value chain.

The division secures a large proportion (>50%) of its revenues through long-term, take-or-pay contracts associated with ultra-high-purity carrier gas supply. These contracts are typically tied to strategic customer manufacturing facilities, creating highly recurring revenues, strong visibility and deep operational integration with customers. Beyond gases, Air Liquide develops advanced materials required for leading-edge semiconductor manufacturing, enabling the continued miniaturization, performance enhancement and energy efficiency demanded by AI, cloud computing and next-generation digital applications.

Its global footprint and proximity to major semiconductor manufacturing hubs provide significant competitive advantages. By operating production facilities directly adjacent to customer sites, Air Liquide delivers critical supply-chain reliability, minimizes operational risk and is able to adapt rapidly to evolving technology requirements.

Geographic footprint

The company has a strong presence in Asia, accounting for 74% of division sales (including the recent DIG acquisition), followed by the US (~19%) and Europe (~7%). Key application for Electronics includes semiconductors, Integrated Circuits (packaging, assembly and test), flat panel displays, LED, photovoltaics, printed circuit board (PCB) and fiber optics.

The Electronics business line consists of five different segments

Carrier gases (51% of divisional sale): Carrier gases include ultra-high-purity nitrogen, oxygen, argon, helium and hydrogen used to transport process molecules and protect semiconductor wafers from contamination. This is the most stable and visible segment within Electronics, benefiting from long-term take-or-pay contracts, typically averaging 15 years in duration.

Demand growth is closely linked to semiconductor fabrication capacity additions rather than short-term chip demand fluctuations, providing resilience across market cycles. The segment has delivered approximately 10% CAGR over the last decade and recorded double-digit growth in 2025, supported by the start-up of seven new production units in Asia and two in EMEA.

We expect strong growth to continue as Air Liquide converts its sizeable project backlog into new production unit start-ups. Given the strategic nature of these assets and the long duration of associated contracts, each new facility provides decades of recurring revenue visibility.

Electronic Specialty Materials (13% of divisional sale): Electronic Specialty Materials include gases such as silane, xenon and nitrous oxide used directly in semiconductor manufacturing processes. Demand in this segment is more closely linked to wafer production volumes and technology node transitions.

The segment delivered ~3% annual growth between 2014 and 2022 before experiencing a cyclical slowdown following the semiconductor industry correction after the 2021 peak. With industry inventories normalizing and wafer production stabilizing, growth should progressively recover.

Looking ahead, demand should be supported by increasing semiconductor complexity and the industry's continued push toward smaller, faster and more energy-efficient chips. Advanced architectures such as 3D NAND, FinFET and Gate-All-Around (GAA) transistors require increasingly sophisticated process materials. Emerging technologies including AI accelerators, 5G/6G infrastructure, IoT devices, autonomous vehicles and high-performance computing should further increase specialty material consumption per wafer.

Advanced Materials (17% of divisional sale): Advanced materials represent one of the most attractive growth opportunities within Electronics. These proprietary molecules are critical for advanced deposition and etching processes, enabling greater transistor density, lower power consumption and improved performance in next-generation memory and logic chips.

Air Liquide is a technology leader in this segment and collaborates closely with leading semiconductor manufacturers during the development of new process technologies. The segment has delivered a ~20% CAGR over the last decade, significantly outpacing broader semiconductor industry growth.

We expect continued strong growth driven by increasing semiconductor complexity and rising adoption of AI-related hardware. The company's recent start-up of the world's largest molybdenum precursor plant in South Korea highlights both its innovation capabilities and its strategic positioning in advanced semiconductor materials.

Equipment & installations (13% of divisional sale): The Equipment & Installations segment designs, manufactures and installs equipment used for gas, material and chemical distribution within customer facilities. Solutions include ultra-pure gas distribution systems, chemical delivery infrastructure, monitoring systems and process control equipment.

The segment has grown at a ~6% CAGR over the last decade but remains inherently more cyclical and volatile than other Electronics activities. Revenue is closely linked to semiconductor fab construction and commissioning activity. Following a record FY24, E&I sales declined meaningfully during 2025 as customer investment timing normalized.

Despite this volatility, E&I remains strategically important as it strengthens customer relationships and often serves as an entry point for subsequent gas and material supply contracts..

Services & Analysis (6% of divisional sale): The Services & Analysis business leverages Air Liquide's expertise in process optimization, gas management and analytical services. The division helps customers improve yield, production efficiency and product quality while ensuring the safe handling of highly specialized materials. The segment has delivered a ~4% CAGR over the last decade and should continue benefiting from increasing process complexity and higher requirements for contamination control in advanced semiconductor manufacturing.

Equity rating dispersion and banking relationships

Equity Rating and Dispersion Key

The Equity Rating Dispersion Chart depicts the following:

The proportion of recommendations that are rated "buy", "sell" and "hold" over the previous 12 months. This is shown for securities issued in the stated region e.g. "Europe Universe". See rating definitions below. This is represented by the "Companies Covered" bars in the chart. The percentage value displayed above the bar is the proportion as a percentage. E.g. 50% above the "buy" / "Companies Covered" bar means that 50% of DB's equity research covered companies over the past 12 months have a "buy" rating.

Next to each of the three respective bars showing the proportion of "buy", "sell" and "hold" recommendations we provide two additional bars to show:

- The proportion of "buy", "sell" or "hold" recommendations where Deutsche Bank and/or Affiliates provided MIFID Investment or Ancillary Services in the past 12 months. This is represented in the "MIFID Investment and Ancillary Services" bar. The percentage value displayed above the bar shows the proportion of Companies Covered with the given rating where DB has also provided MIFID Investment and Ancillary Services in the past 12 months. E.g. 50% above the "Cos. w/ MIFID Investment and Ancillary Services" bar means 50% of the Companies Covered with the rating stated have also received MIFID Investment and Ancillary Services from DB.

- The proportion of "buy" (or "sell" or "hold") recommendations where Deutsche Bank and/or Affiliates has provided Investment Banking services in the past 12 months for which it has received compensation. The percentage value displayed above the bar shows the proportion of Companies Covered with the stated rating where DB has also provided Investment Banking services in the past 12 months. E.g. 50% above the "Cos. w/ Investment Banking relationship" bar means 50% of the Companies Covered with the rating stated also have an Investment Banking Relationship with DB.

Buy: Based on a current 12-month view of TSR, we recommend that investors buy the stock.

Sell: Based on a current 12-month view of TSR, we recommend that investors sell the stock.

Hold: We take a neutral view on the stock 12-months out and, based on this time horizon, do not recommend either a Buy or Sell.

TSR = Total Shareholder Return. Percentage change in share price from current price to projected target price plus projected dividend yield

Newly issued research recommendations and target prices supersede previously published research.

Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively 'Deutsche Bank'). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness. Hyperlinks to third-party websites in this report are provided for reader convenience only. Deutsche Bank neither endorses the content nor is responsible for the accuracy or security controls of those websites.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies, perspectives or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that may be inconsistent with Deutsche Bank's existing longer-term ratings. Some trade ideas for equities are listed as Catalyst Calls on the Research Website (<https://research.db.com/Research/>), and can be found on the general coverage list and also on the covered company's page. A Catalyst Call represents a high-conviction belief by an analyst that a stock will outperform or underperform the market and/or a specified sector over a time frame of no less than two weeks and no more than three months. In addition to Catalyst Calls, analysts may occasionally discuss with our clients, and with Deutsche Bank salespersons and traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts' current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if an opinion, forecast or estimate changes or becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company-specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst or of the Research Department Management, and the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst's judgment. The financial instruments discussed in this report may not be suitable for all investors, and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice, and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor's currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Performance calculations exclude transaction costs, unless otherwise indicated. Unless otherwise indicated, prices are current as of the end of the previous trading session and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is also sourced from Deutsche Bank, subject companies, and other parties. Artificial intelligence tools may be used in the preparation of this material, including but not limited to assist in fact-finding, data analysis, pattern recognition, content drafting and editorial corrections pertaining to research material.

The Deutsche Bank Research Department is independent of other business divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research are available on our website (<https://research.db.com/Research/>) under Disclaimer.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed-rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or liquidation of positions), and settlement issues related to local clearing houses are also important risk factors. The sensitivity of fixed-income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates - these are common in emerging markets. The index fixings may - by construction - lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. Funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Options on swaps (swaptions) the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including market, counterparty default and illiquidity risk. The appropriateness of these products for use by investors depends on the investors' own circumstances, including their tax position, their regulatory environment and the nature of their other assets and liabilities; as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited - up to theoretically unlimited losses. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option, investors must review the 'Characteristics and Risks of Standardized Options', at <https://www.theocc.com/company-information/documents-and-archives/options-disclosure-document>. If you are unable to access the website, please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government-imposed exchange controls, which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor's home jurisdiction. Aside from within this report, important conflict disclosures can also be found at <https://research.db.com/Research/> on each company's research page or under the 'Disclosures' tab. Investors are strongly encouraged to review this information before investing.

Deutsche Bank (which includes Deutsche Bank AG, its branches and affiliated companies) is not acting as a financial adviser, consultant or fiduciary to you or any of your agents (collectively, "You" or "Your") with respect to any information provided in this report. Deutsche Bank does not provide investment, legal, tax or accounting advice, Deutsche Bank is not acting as your impartial adviser, and does not express any opinion or recommendation whatsoever as to any strategies, products or any other information presented in the materials. Information contained herein is being provided solely on the basis that the recipient will make an independent assessment of the merits of any investment decision, and it does not constitute a recommendation of, or express an opinion on, any product or service or any trading strategy.

The information presented is general in nature and is not directed to retirement accounts or any specific person or account type, and is therefore provided to You on the express basis that it is not advice, and You may not rely upon it in making Your decision. The information we provide is being directed only to persons we believe to be financially sophisticated, who are capable of evaluating investment risks independently, both in general and with regard to particular transactions and investment strategies, and who understand that Deutsche Bank has financial interests in the offering of its products and services. If this is not the case, or if You are an IRA or other retail investor receiving this directly from us, we ask that you inform us immediately.

In July 2018, Deutsche Bank revised its rating system for short term ideas whereby the branding has been changed to Catalyst Calls ("CC") from SOLAR ideas; the rating categories for Catalyst Calls originated in the Americas region have been made consistent with the categories used by Analysts globally; and the effective time period for CCs has been reduced from a maximum of 180 days to 90 days.

United States: Approved and/or distributed by Deutsche Bank Securities Incorporated, a member of FINRA and SIPC. Analysts located outside of the United States are employed by non-US affiliates and are not registered/qualified as research analysts with FINRA.

European Economic Area (exc. United Kingdom): Approved and/or distributed by Deutsche Bank AG, a joint stock corporation with limited liability incorporated in the Federal Republic of Germany with its principal office in Frankfurt am Main. Deutsche Bank AG is authorized under German Banking Law and is subject to supervision by the European Central Bank and by BaFin, Germany's Federal Financial Supervisory Authority.

United Kingdom: Approved and/or distributed by Deutsche Bank AG acting through its London Branch at 21 Moorfields, London EC2Y 9DB. Deutsche Bank AG in the United Kingdom is authorised by the Prudential Regulation Authority and is subject to limited regulation by the Prudential Regulation Authority and Financial Conduct Authority. Details about the extent of our authorisation and regulation are available on request.

Hong Kong SAR: Distributed by Deutsche Bank AG, Hong Kong Branch except for any research content relating to futures contracts within the meaning of the Hong Kong Securities and Futures Ordinance Cap. 571. Research reports on such futures contracts are not intended for access by persons who are located, incorporated, constituted or resident in Hong Kong. The author(s) of a research report, and the entities for which they act and/or are affiliated with, may not be licensed to carry on regulated activities in Hong Kong and, if not licensed, do not hold themselves out as being able to do so. The provisions set out above in the 'Additional Information' section shall apply to the fullest extent permissible by local laws and regulations, including without limitation the Code of Conduct for Persons Licensed or Registered with the Securities and Futures Commission. This report is intended for distribution only to 'professional investors' as defined in Part 1 of Schedule of the SFO. This document must not be acted or relied on by persons who are not professional investors. Any investment or investment activity to which this document relates is only available to professional investors and will be engaged only with professional investors.

India: Prepared by Deutsche Equities India Private Limited (DEIPL) having CIN: U65990MH2002PTC137431 and registered office at 14th Floor, The Capital, C-70, G Block, Bandra Kurla Complex, Mumbai (India) 400051. Tel: + 91 22 7180 4444. It is registered by the Securities and Exchange Board of India (SEBI) as a Stock broker bearing registration no.: INZ000252437; Merchant Banker bearing SEBI Registration no.: INM000010833 and Research Analyst bearing SEBI Registration no.: INH000001741. DEIPL's Compliance / Grievance officer is Ms. Rashmi Poddar (Tel: +91 22 7180 4929 email ID: complaints.deipl@db.com). Registration granted by SEBI and certification from NISM in no way guarantee performance of DEIPL or provide any assurance of returns to investors. Investment in securities market are subject to market risks. Read all the related documents carefully before investing. DEIPL may have received administrative warnings from the SEBI for breaches of Indian regulations. Deutsche Bank and/or its affiliate(s) may have debt holdings or positions in the subject company. With regard to information on associates, please refer to the "Shareholdings" section in the Annual Report at: <https://www.db.com/ir/en/annual-reports.htm>. For latest India research audit report, refer https://country.db.com/india/deutsche-equities-india/index?language_id=1.

Japan: Approved and/or distributed by Deutsche Securities Inc.(DSI). Registration number - Registered as a financial instruments dealer by the Head of the Kanto Local Finance Bureau (Kinsho) No. 117. Member of associations: JSDA, Type II Financial Instruments Firms Association and The Financial Futures Association of Japan. Commissions and risks involved in stock transactions - for stock transactions, we charge stock commissions and consumption tax by multiplying the transaction amount by the commission rate agreed with each customer. Stock transactions can lead to losses as a result of share price fluctuations and other factors. Transactions in foreign stocks can lead to additional losses stemming from foreign exchange fluctuations. We may also charge commissions and fees for certain categories of investment advice, products and services. Recommended investment strategies, products and services carry the risk of losses to principal and other losses as a result of changes in market and/or economic trends, and/or fluctuations in market value. Before deciding on the purchase of financial products and/or services, customers should carefully read the relevant disclosures, prospectuses and other documentation. 'Moody's', 'Standard Poor's', and 'Fitch' mentioned in this report are not registered credit rating agencies in Japan unless Japan or 'Nippon' is specifically designated in the name of the entity. Reports on Japanese listed companies not written by analysts of DSI are written by Deutsche Bank Group's analysts with the coverage companies specified by DSI. Some of the foreign securities stated on this report are not disclosed according to the Financial Instruments and Exchange Law of Japan. Target prices set by Deutsche Bank's equity analysts are based on a 12-month forecast period.

Korea: Distributed by Deutsche Securities Korea Co.

South Africa: Deutsche Bank AG Johannesburg is incorporated in the Federal Republic of Germany (Branch Register Number in South Africa: 1998/003298/10).

Singapore: This report is issued by Deutsche Bank AG, Singapore Branch (One Raffles Quay #18-00 South Tower Singapore 048583, 65 6423 8001), which may be contacted in respect of any matters arising from, or in connection with, this report. Where this report is issued or promulgated by Deutsche Bank in Singapore to a person who is not an accredited investor, expert investor or institutional investor (as defined in the applicable Singapore laws and regulations), they accept legal responsibility to such person for its contents.

Taiwan: Information on securities/investments that trade in Taiwan is for your reference only. Readers should independently evaluate investment risks and are solely responsible for their investment decisions. Deutsche Bank research may not be distributed to the Taiwan public media or quoted or used by the Taiwan public media without written consent. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation to trade in such securities/instruments.

Qatar: Deutsche Bank AG in the Qatar Financial Centre (registered no. 00032) is regulated by the Qatar Financial Centre Regulatory Authority. Deutsche Bank AG - QFC Branch may undertake only the financial services activities that fall within the scope of its existing QFCRA license. Its principal place of business in the QFC: Qatar Financial Centre, Tower, West Bay, Level 5, PO Box 14928, Doha, Qatar. This information has been distributed by Deutsche Bank AG. Related financial products or services are only available only to Business Customers, as defined by the Qatar Financial Centre Regulatory Authority.

Russia: The information, interpretation and opinions submitted herein are not in the context of, and do not constitute, any appraisal or evaluation activity requiring a license in the Russian Federation.

Kingdom of Saudi Arabia: Deutsche Securities Saudi Arabia (DSSA) is a closed joint stock company authorized by the Capital Market Authority of the Kingdom of Saudi Arabia with a license number (No. 37-07073) to conduct the following business activities: Dealing, Arranging, Advising, and Custody activities. Australia and New Zealand: This research is intended only for 'wholesale clients' within the meaning of the Australian Corporations Act and New Zealand Financial Advisors Act, respectively. Please refer to Australia-specific research disclosures

and related information at https://www.dbresearch.com/PROD/RPS_EN-PROD/PROD0000000000521304.xhtml. Where research refers to any particular financial product recipients of the research should consider any product disclosure statement, prospectus or other applicable disclosure document before making any decision about whether to acquire the product. In preparing this report, the primary analyst or an individual who assisted in the preparation of this report has likely been in contact with the company that is the subject of this research for confirmation/clarification of data, facts, statements, permission to use company-sourced material in the report, and/or site-visit attendance. Without prior approval from Research Management, analysts may not accept from current or potential Banking clients the costs of travel, accommodations, or other expenses incurred by analysts attending site visits, conferences, social events, and the like. Similarly, without prior approval from Research Management and Anti-Bribery and Corruption ("ABC") team, analysts may not accept perks or other items of value for their personal use from issuers they cover.

Additional information relative to securities, other financial products or issuers discussed in this report is available upon request. This report may not be reproduced, distributed or published without Deutsche Bank's prior written consent.

Backtested, hypothetical or simulated performance results have inherent limitations. Unlike an actual performance record based on trading actual client portfolios, simulated results are achieved by means of the retroactive application of a backtested model itself designed with the benefit of hindsight. Taking into account historical events the backtesting of performance also differs from actual account performance because an actual investment strategy may be adjusted any time, for any reason, including a response to material, economic or market factors. The backtested performance includes hypothetical results that do not reflect the reinvestment of dividends and other earnings or the deduction of advisory fees, brokerage or other commissions, and any other expenses that a client would have paid or actually paid. No representation is made that any trading strategy or account will or is likely to achieve profits or losses similar to those shown. Alternative modeling techniques or assumptions might produce significantly different results and prove to be more appropriate. Past hypothetical backtest results are neither an indicator nor guarantee of future returns. Actual results will vary, perhaps materially, from the analysis.

The method for computing individual E,S,G and composite ESG scores set forth herein is a novel method developed by the Research department within Deutsche Bank AG, computed using a systematic approach without human intervention. Different data providers, market sectors and geographies approach ESG analysis and incorporate the findings in a variety of ways. As such, the ESG scores referred to herein may differ from equivalent ratings developed and implemented by other ESG data providers in the market and may also differ from equivalent ratings developed and implemented by other divisions within the Deutsche Bank Group. Such ESG scores also differ from other ratings and rankings that have historically been applied in research reports published by Deutsche Bank AG. Further, such ESG scores do not represent a formal or official view of Deutsche Bank AG. It should be noted that the decision to incorporate ESG factors into any investment strategy may inhibit the ability to participate in certain investment opportunities that otherwise would be consistent with your investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.
