

Resonac Holdings (4004.T): Positive implications for HD media business from reported major HDD production increase at Toshiba

According to an October 2 *Nikkei* report, Toshiba plans to invest c.¥60 bn to expand its Philippine plant and double its production capacity of HDDs for AI data centers during FY3/28. This is reportedly the first large-scale investment in the HDD unit in about five years. In addition to expanding production lines, it will support new products with up to 40% more storage capacity per unit. Furthermore, on a capacity basis, Toshiba reportedly aims to achieve the 65 TB class in 2030, followed by the 100 TB class. This reported move could have positive implications for Resonac's HD media business, for which we assume Toshiba is the largest customer (the business accounts for the second-largest share of sales after copper clad laminates (CCL) in the semiconductor and electronic materials business, based on our FY12/26 estimates). We reiterate our Buy rating, as in addition to Resonac's broad coverage, competitiveness, and growth potential in back-end materials for AI data centers (such as CCL, non-conductive film products (NCF), dry film resists (DFR), and thermal interface materials (TIM)), the business potential of HD media and SiC wafers also appears high. We look for valuation multiple expansion as a purer semiconductor and electronic materials company following the spin-off of Crasus Chemical.

Implications

Toshiba relies on external procurement for HD media, and we assume it is the largest customer of Resonac's HD media business. Based on data from TSR and other sources, assuming Toshiba's nearline shipments in 2026 are 10 mn units with 8-10 media disks per unit, we estimate that shipments for Toshiba will be 80 mn to 100 mn units, corresponding to 50%-60% of Resonac's current capacity of 160 mn units. Assuming the *Nikkei* report is on a unit basis, Resonac's planned capacity expansion of 50 mn units/year in Singapore, scheduled to sequentially come online in 2027, would likely be filled early by Toshiba alone. Consequently, we expect there would be little spare capacity for external sales to Seagate and Western Digital, which are also Resonac customers. We therefore believe supply/demand conditions could tighten considerably, increasing the likelihood of price hikes taking hold. In addition to the recently announced ([link](#)) 20 mn unit/year capacity expansion for nearline HD media for AI data centers (which will cumulatively increase capacity by c.44% from the current c.160 mn units/year to a total of c.230 mn units/year from 2029), further capacity expansions could come into view going forward. Including the price hike initiatives that Resonac has been rolling out in 2H12/26, we view this news as increasing our conviction in the medium- to long-term growth potential of the HD media business, a core operation within the semiconductor and electronic materials

Price Target Risks and Methodology – Resonac

We are Buy rated on Resonac with a 12-month target price of ¥25,060. Our target price is based on the correlation between the materials sector's EV/GCI and the FY12/27E CROCI/WACC (cash-return multiple of 0.7X plus a 30% premium to the sector average). Key risks include a slowdown in semiconductor demand, yen appreciation, and decline in graphite electrode earnings.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at <https://www.gs.com/research/hedge.html>.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.
