

Soitec

Deeper Mobile trough likely to offset any SiPho upside:
Stay Neutral

Soitec is ~40% off its year-to-date peak, with some investors questioning whether this represents an attractive entry point for a medium-term position. We think there is upside to consensus expectations on the SiPho opportunity, but offsetting this we see a continued contraction and a much shallower recovery in the Mobile business than is currently anticipated by consensus. AI and the associated infrastructure build-out has been a mixed blessing for Soitec, with the SiPho business booming but the Mobile business likely to suffer as high DRAM prices (due to AI demand) leads to demand destruction. We remain Neutral, on the view that the downside risk to the core Mobile Communications business is not yet fully reflected in the shares, but equally, we do not think being underweight is sensible while we see upgrade risk to the Edge & Cloud AI division.

- SiPho remains the significant driver:** We expect SiPho will be the material growth engine for Soitec (helped by rising adoption in transceivers and CPO ramping from ~2028). We model rapid growth (50% revenue CAGR FY25-30e; €535m in FY30) supported by pre-existing capacity with an assumption that Soitec's market share normalises (~80% in FY30) as competition ramps (notably Global Wafers) plus some downward pressure on pricing as long-term supply agreements take effect. We recognise a high degree of execution risk in SiPho, both for Soitec and also at its customers (in particular ramping CPO).
- Mobile decline to continue in FY27 with shallower recovery:** Mobile remains the largest division (~52% of FY26 revenue) but with a step-down in handset volumes expected in 2026-2027 (we estimate -16% and -3%, respectively). As DRAM pricing flows through the supply chain, we see a further contraction in Mobile revenues. Management's more disciplined approach to RF-SOI pricing from FY27 onwards could support margins, but also increase market-share-loss risk and prolong the destocking cycle (we now assume destocking into FY28). *Our revenue forecast for the Mobile Communications division is 14-17% below consensus in FY27-29.*
- Auto & Industrial still working through inventory:** Inventories across Auto & Industrial customers remain elevated, which will represent a headwind to Soitec volume and possibly pricing through FY27 (although pricing discipline appears to be a company priority). There are some recent indications of restocking in the Auto supply chain, but we expect IDMs to see most of the benefit (rather than wafer makers). On top of this, SmartSiC is likely to contract further based on competitive pressures (which prompted the impairment in FY26). We expect revenue to be broadly flat in FY27, with a gradual improvement in FY28 largely in line with consensus.
- Gross margin trajectory shallower than consensus expects:** We see a more gradual margin rebuild than the latest consensus, with group-level gross margin only reaching 30.2% in FY29 (vs. 32.2% consensus) despite SiPho mix benefits and improving loading. Headwinds include a higher fixed-cost/depreciation base, pricing pressure (especially RF-SOI) and currency. In the near term, elevated inventory write-downs in FY26 should support FY27 gross margins.

Summary Investment Thesis and Valuation

Investment Thesis

Soitec is going through a period of extreme inventory correction at customers, which is having a significant negative impact on revenue. At the same time, concerns over the competition for Soitec's largest product (RF-SOI) are heightened. Other products are beginning to compensate, notably POI and Photonics-SOI, which we expect to become the dominant revenue stream in the next 2-3 years. Market enthusiasm for Silicon Photonics has resulted in a significant run-up in the shares; however, we now see the valuation as full to fair, reflecting the future opportunity.

Valuation

Our Dec-27 price target of €92 is based on 11.0x FY29e EBITDA (y/e March 2029) (previously €130 valued on 15.0x FY29). The chosen multiple is at the high end of the wafer maker range, justified by higher growth; the multiple is a ~10% premium to the last five-year average, justified by improving growth, returns and cash flow. We value on FY29 earnings, which we expect to be more normalised following a period of depressed financial performance (in FY26 and expected/guided in FY27).

- **What else could drive upside for the shares from here?** The current share price appears to assume SiPho delivering €500m+ revenue by FY30, other divisions returning to growth in FY28, and an improving margin/FCF profile. Beyond any changes to forecasts, we do not think the portfolio review (possibly at H1'27 results) will significantly change the market's perception, while investors will be reluctant to fully underwrite 'incubator projects' at an early stage.
- **Q1'27 and Q2'27 reflecting our medium term view:** For Q1 (June-end quarter), we are in line with company guidance (+15% y/y organic) which is in line with consensus. Similarly, for Q2 we are broadly in line with consensus. However, we are below on Mobile Communications, but ahead on Edge & Cloud AI (see Table 4).
- **Conclusion for the shares:** Soitec is running at two speeds with SiPho revenue surging, while Mobile Communications (as well as Automotive & Industrial) is seeing slow growth in the forecast period. We think that revenue forecast upgrades could come through on SiPho/Edge & Cloud AI, but there is downside risk to other division estimates; net, at the group level, our forecasts are 4%/6%/3% below the latest consensus. We remain Neutral, on the view that the downside risk to the core Mobile Communications business is not yet fully reflected in the shares, but equally, we do not think being underweight is sensible while we see upgrade risk to the Edge & Cloud AI division.
- **Forecast and PT update:** We revise our revenue forecasts with group level changes of -4%/-9%/-3% in FY27/28/29, respectively, with revisions to Mobile as well as Auto & Industrial. The lower revenue assumptions flow through the P&L with limited changes to our opex and D&A assumptions (see Table 2 for summary of forecast changes). Our new PT is €92 (previously €130), which reflects our lowered estimates as well as a lowered multiple (11.0x from 15.0x, reflecting multiple contraction across the peer group).

SiPho remains the significant driver

On **volume**, we expect Silicon Photonics (SiPho)-based modules to represent a growing share of optical transceivers in the forecast period, given energy and data-efficiency benefits, while leveraging mature silicon foundries for high-volume production (e.g. STMicroelectronics moving into the SiPho foundry). Industry consultancy Lightcounting estimates that in 2026, SiPho will represent ~52% of the optical transceiver market (up from ~33% in 2024). CPO will be the next leg of growth later in the decade as it ramps from 2028 onwards – we expect this will be completely based on SiPho (with much larger SiPho content). The result is very significant growth in the SiPho wafer market through to 2030 (JPMe ~66% CAGR 2025-2030).

On **pricing**, while pricing in FY27 is likely to remain positive, we think LTSAs will lead to small (LSD%) blended ASP erosion for Soitec's SiPho business. This will be based on both the initial contract price but also an assumption of pricing descenders (i.e. higher volumes at lower prices). From our discussions with the company, we understand that the aim of the long-term supply agreements (LTSAs) is to gain greater confidence on future volume and pricing, as well as to improve the working capital profile - not necessarily to optimise price. A parallel may be drawn to the memory makers which have managed to secure material LTSA's with customers stretching for 3-5 years and in some cases structured as take or pay - we think this will be the ambition for Soitec.

On **market share**, we forecast an erosion of Soitec's market share to ~80% in FY30 (from an effective ~100% currently). Soitec is in the process of qualifying with a number of customers for CPO, which should support market share in the face of competition. In terms of competitors, we highlight Global Wafers (covered by Jimmy Huang) as the main competitive threat. As a reminder, Global Wafers has developed silicon on insulator technology (independent of Soitec patents) and developed a facility in Missouri dedicated to SOI at 300mm. The latest commentary from Global Wafers is that the Missouri facility is already covered by long-term agreements, although the split between RF-SOI and Photonics is uncertain ("*Capacity is nearly full with output largely sold through and selected RF-SOI and photonics already ramping.*", 5 May 2026 *Q1 earnings call*). Global Wafers management has indicated that it is exploring the expansion of its SOI production capacity, although no firm commitment has been made. Shin Etsu is also a competitor in SiPho, however, it is reliant on a SmartCut licence and as such may be less cost competitive.

We recognise a high degree of execution risk to SiPho estimates, both internally for Soitec in terms of converting capacity, securing contracts, etc, but also with customers as it launches CPO products (which will be a significant driver of SiPho content).

Taken together, we see faster growth for Soitec's Edge & Cloud AI business, with our revenue forecasts for this division +6%/+10%/+14% below the latest Vara consensus (Table 2).

Mobile decline to continue in FY27 with shallower recovery

Mobile Communications still represents the majority of Soitec revenues (~52% in FY26), and fundamentally the revenue development of this division will be tied to the mobile handset market (Figure 5), although there will be increasing content and some technology shift providing tailwinds. We now factor in a handset decline of 16% in calendar 2026 and 3% in 2027, this is lower than our prior forecast which reflects further [news](#) reports of production cuts by Chinese-focused vendors.

On **RF-SOI**, which is the largest product within Mobile Communications and where there is significant inventory sitting at customers (Figure 6), we see a shallower revenue recovery as the digestion of channel inventory is prolonged given softer end-market demand (Figure 7). We understand that management is moving to a more disciplined pricing policy on RF-SOI going forward; positively, this should support gross margin, but negatively, we see greater risk of market share loss (we assume market share erosion to lower priced competitors) and elongation of the destocking cycle (we now assume destocking in FY28).

On the **non-RF SOI Mobile business**, the destocking is less of a headwind while there are new technologies (notably POI) which are increasing in adoption and should allow for growth ahead of mobile phone units in the forecast period (Figure 8).

Taken together, we see a shallower trajectory for Soitec's Mobile business, with our revenue forecasts for Soitec's Mobile Communication business -15%/-14%/-17% below the latest Vara consensus (Table 2).

Auto & Industrial still working through inventory

Recent commentary across IDMs suggests that the Industrial end-market is seeing the beginning of an upcycle; however, the Automotive end-market is much more tentative. The Automotive end-market remains in a prolonged downturn, with regulation in the US and China delaying an upcycle (i.e. changes in the EV tax credit scheme in the US, and changes in incentive schemes in China). There has been some evidence through Q1 reporting of restocking in the Automotive supply chain benefiting IDMs, but without any real change in the end-market (in fact, S&P has revised down vehicle production forecasts) and with inventories still elevated at IDMs, we do not think that the restocking benefit will extend further down the supply chain to Soitec. Our base case is that Auto & Industrial revenue sees mild growth in FY27, with an improvement in growth in FY28 – within this we assume further declines in the SmartSic business (given competitive pressures which prompted the impairment through FY26).

Our revenue estimates for Auto & Industrial largely correspond to latest Vara consensus (Table 2).

Gross margin trajectory shallower than consensus expects

Most investors we speak to (and our modelling) forecast FY29 revenue $\geq$ €1bn. On gross margin, our starting point is to use FY23 (~€1.1bnn revenue) level as the basis (i.e. 37.0%), with a number of puts and takes into the future (which we outline below). The net impact, in our view, is a shallower trajectory upwards in gross margin, with our estimate *not* breaking through 35% in the forecast period.

Headwinds

- **Capital base growth:** The capital base has grown significantly since FY23, with corresponding increases in the depreciation charge and operating costs, creating a higher fixed cost base hurdle. The PPE balance has grown ~27% from FY23 to end-FY26 (note, this would be higher when excluding impairments of tangible assets related to SmartSiC, while the number of “production” employees grew ~12% in the same period (from 1,269 to 1,418) adding to the fixed operating cost.
- **Mix and price:** While SiPho will be accretive to contribution margin in the forecast period, we see price pressures in key substrates (notably RF-SOI) resulting in a softer group-level contribution margin compared to the peak of FY23. Management is being more disciplined on pricing in FY27 (even in the face of high channel inventory), but within the Mobile segment we struggle to see positive pricing in the forecast period given inventory in the channel and growing competition.
- **Currency:** The average EURUSD rate in FY23 was ~1.04 vs. the current level of ~1.14. With sales in USD and a largely EUR cost base, the move in exchange rate represents a headwind to profitability (as a reminder, a ~5c move higher in the EURUSD rate represents a ~150bps headwind to EBITDA margin, with our expectation that this is mostly in the gross margin).
- **Rising bare wafer prices:** We don’t see an *immediate* risk to gross margins from the higher bulk wafer prices that have been reported in the industry, but we do see this as a possible impact (which may be offset in Soitec’s pricing). Soitec has ~€194m of raw materials (including ~€37m of consignment) as well as high balances of WIP (~€20m) and finished products (~€20m); we expect that these balances should sustain sales largely through FY27 (Days of Inventory stands at 162 days, Figure 9).

Tailwinds

- **Licensing income:** We note a step change in the licence income earned by Soitec since FY23. We expect that the step change relates to a change in the royalty rate paid on IP-use rather than being volume driven, with a positive impact on gross margin. Global Wafers is no longer a licensee so that will reduce license income going forward (although we understand from discussion with the company there was a one-off “catch up” royalty from Global Wafers in the FY26 base, ~€HSDm), but that the company is seeking further licensees (e.g. ZenSemi)
- **Inventory write-downs:** There was an elevated impairment of inventory which would have had the effect of depressing gross margins in FY26 (Figure 10). However, in future periods as this impaired inventory is sold and recognised in COGs, the gross margin should see support (likely in FY27).

Taken together, we see a shallower trajectory for Soitec’s gross margin, with our gross margin forecast ~200-360 bps below latest Vara consensus in FY28 and FY29 (Table 2).

What else could drive upside for the shares from here?

From discussions in the market, we see the following expectations underpinning the current share price:

1. SiPho to deliver revenue of *greater* than €500m in FY30
2. Mobile Communications and Automotive & Industrial returning to growth in FY28
3. Group-level gross margins reaching low-mid 30% by FY29
4. An improving operating margin and free cash flow profile

As we outline above, we are more cautious on (2), (3) and (4) with our forecasts below consensus expectations. Beyond the numbers in the forecast period, we highlight two events that may have a bearing on the shares – **(a)** presentation of the portfolio review currently being undertaken by CEO Remont, and **(b)** the increasing credibility of ‘incubator projects’:

- On **(a)**, our expectation is that this will include actions to better optimise sales and research efforts (focusing on the most valuable opportunities) or at most extreme discontinuation of some small product lines (which are either undifferentiated or not a large enough market); in either case we don’t see a fundamental change in view on the company. We don’t expect a read-out from this review until at least H1’27 results in November.
- On **(b)**, we sense that under the new CEO, Soitec will be investing further in the next drivers of growth. Although there have been some indications of application of SOI in memory or quantum computing, we expect that the market will be reluctant to underwrite in Soitec numbers.

What is the right multiple for Soitec at this point?

Five-year history has seen Soitec trading on ~10x two-year forward EBITDA on average, although we note a significant variation in this time (~4.0x to ~26.0x more recently). We think that as estimates begin to stabilise (following the significant expansion driven by SiPho) a small premium to longer-run average EBITDA multiple can be justified, owing to:

- **Improving free cash flow:** With action taken by management to correct working capital and more disciplined capital allocation, we see a significant improvement in free cash generation, with our expectation for €212m of free cash flow in the next three years (comparing to €97m cumulative in the prior five years).
- **Improving growth and returns:** With working capital improvement and capital discipline we see improving ROIC in the forecast period (contrary to the declining trend in the prior five years); in addition there is accelerating growth (driven by SiPho), which is unlike the prior five years where growth was decelerating (and turning negative).
- **Durable growth:** We view the SiPho growth driver as more durable than the prior RF-SOI driven growth. The RF-SOI growth driver is backed (ultimately) by hyperscaler capex, which is much more robust backing than the consumer market (mobile phones).
- **Improving sentiment:** From recent discussions with investors we note improving sentiment toward Soitec, with investors willing to reassess with a new management team in place and being proactive and candid on the measures needed to improve the company.

We value the shares at 11.0x two-year forward EBITDA, which is a ~10% premium to recent history (given the justification above). The selected multiple is at the high end of the range of wafer maker peers on an EV/EBITDA basis (more expensive on a P/E basis), which can be justified by higher growth.

Investment Thesis, Valuation and Risks

Soitec (Neutral; Price Target: €92.00)

Investment Thesis

Soitec is going through a period of extreme inventory correction at customers, which is having a significant negative impact on revenue. At the same time, concerns over the competition for Soitec's largest product (RF-SOI) are heightened. Other products are beginning to compensate, notably POI and Photonics-SOI, which we expect to become the dominant revenue stream in the next 2-3 years. Market enthusiasm for Silicon Photonics has resulted in a significant run-up in the shares; however, we now see the valuation as full to fair, reflecting the future opportunity.

Valuation

Our Dec-27 price target of €92 is based on 11.0x FY29e EBITDA (y/e March 2029) (previously €130 valued on 15.0x FY29). The chosen multiple is at the high end of the wafer maker range, justified by higher growth; the multiple is a ~10% premium to the last five-year average, justified by improving growth, returns and cash flow. We value on FY29 earnings, which we expect to be more normalised following a period of depressed financial performance (in FY26 and expected/guided in FY27).

Risks to Rating and Price Target

Key upside risks to our rating/price target include:

- Better-than-expected growth in Silicon Photonics
- Stabilisation of market share in RF-SOI post inventory correction.
- Better-than-expected smartphone recovery and adoption of FD-SOI across 5G smartphone mmWave, automotive and IoT applications.
- New high volume customer wins for POI product offering.
- Better-than-expected improvement in operating margin and free cash flow generation on the back of management action.

Key downside risks:

- Heightened competition in RF-SOI leading to more rapid market share loss (in particular from Global Wafers)
- More rapid market share loss in SiPho, most likely from Global Wafers
- No normalisation of inventory levels.
- Initiatives to improve working capital may have a detrimental impact on revenue/market share and profitability.

Analyst Certification: The Research Analyst(s) denoted by an “AC” on the cover of this report certifies (or, where multiple Research Analysts are primarily responsible for this report, the Research Analyst denoted by an “AC” on the cover or within the document individually certifies, with respect to each security or issuer that the Research Analyst covers in this research) that: (1) all of the views expressed in this report accurately reflect the Research Analyst’s personal views about any and all of the subject securities or issuers; and (2) no part of any of the Research Analyst’s compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the Research Analyst(s) in this report. For all Korea-based Research Analysts listed on the front cover, if applicable, they also certify, as per KOFIA requirements, that the Research Analyst’s analysis was made in good faith and that the views reflect the Research Analyst’s own opinion, without undue influence or intervention.

All authors named within this report are Research Analysts who produce independent research unless otherwise specified. In Europe, Sector Specialists (Sales and Trading) may be shown on this report as contacts but are not authors of the report or part of the Research Department.

Important Disclosures

- **Market Maker/ Liquidity Provider:** J.P. Morgan is a market maker and/or liquidity provider in the financial instruments of/related to Soitec or related entities.
- **Client:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients: Soitec or related entities.
- **Potential Investment Banking Compensation:** J.P. Morgan expects to receive, or intends to seek, compensation for investment banking services in the next three months from Soitec or related entities.
- **Debt Position:** J.P. Morgan may hold a position in the debt securities of Soitec or related entities, if any.

Company-Specific Disclosures: J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Important disclosures, including price charts and credit opinion history tables (if applicable), are available for compendium reports and all J.P. Morgan–covered companies, and certain non-covered companies, by visiting <https://www.jpmm.com/research/disclosures>, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

Soitec (SOIT.PA, SOI FP) Price Chart

Source: Bloomberg Finance L.P. and J.P. Morgan; price data adjusted for stock splits and dividends.
Initiated coverage Jan 18, 2007. All share prices are as of market close on the previous business day.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period. J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst’s, or the Research Analyst’s team’s, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst’s, or the Research Analyst’s team’s, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst’s, or the Research Analyst’s team’s, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the

price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, <https://www.jpmorganmarkets.com>.

Coverage Universe: McDowell, Craig A: Aixtron (AIXGn.DE), Comet Holding (COTNE.S), Inficon (IFCN.S), Melexis (MLXS.BR), Nexi (NEXIL.MI), Nordic Semiconductor (NOD.OL), Sensirion (SENSI.S), Soitec (SOIT.PA), Wise (WSE), Wise Plc (WISEa.L), Worldline (WLN.PA), ams-Osram (AMS.S)

J.P. Morgan Equity Research Ratings Distribution, as of July 04, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	36%	12%
IB clients**	83%	80%	73%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	92%	87%

*Please note that the percentages may not add to 100% because of rounding.

**Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.

For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at <http://www.jpmorganmarkets.com>, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, <http://www.jpmorganmarkets.com>. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of <http://www.jpmorganmarkets.com> where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Morgan Markets Limited (“JPML Ltd”) which is authorised and regulated by the Financial Conduct Authority. Unless specified to the contrary, this material is distributed in the UK by JPMS plc and is directed in the UK only to: (a) persons having professional experience in matters relating to investments falling within article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) (Order) 2005 (“the FPO”); (b) persons outlined in article 49 of the FPO (high net worth companies, unincorporated associations or partnerships, the trustees of high value trusts, etc.); or (c) any persons to whom this communication may otherwise lawfully be made; all such persons being referred to as “UK relevant persons”. This material must not be acted on or relied on by persons who are not UK relevant persons. Any investment or investment activity to which this material relates is only available to UK relevant persons and will be engaged in only with UK relevant persons. A description of J.P. Morgan EMEA’s policy for prevention and avoidance of conflicts of interest related to the production of Research can be found at the following link: [J.P. Morgan EMEA - Research Independence Policy](#).

U.S.: J.P. Morgan Securities LLC (“JPMS”) is a member of the NYSE, FINRA, SIPC, and the NFA. JPMorgan Chase Bank, N.A. is a member of the FDIC. Material published by non-U.S. affiliates is distributed in the U.S. by JPMS who accepts responsibility for its content.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and

should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.

Confidentiality and Security Notice: This transmission may contain information that is privileged, confidential, legally privileged, and/or exempt from disclosure under applicable law.
