

NAURA Technology (002371 CH)

Buy: More room to run

- ◆ Domestic semi capex broadening supports further upside
- ◆ Platform strategy opens growth vectors in glass substrates
- ◆ Maintain Buy; raise TP to RMB1,031.90 from RMB528.40

Further upside ahead. With the upward capex revision of domestic memory players, NAURA's share price has risen 57% over the past two months, but still lagging the Wind Semiconductor Equipment Index's 72% gain. The relative underperformance is mainly due to: 1) concerns over the gross margin trend post-1Q results; and 2) lower revenue exposure to memory customers compared with peers such as AMEC and Piatech. Looking ahead, we expect the company to leverage its broad product portfolio to capture incremental orders across memory, logic, and glass substrate customers, realising 27%-28% top line growth in 2026-28e. Therefore, while we lower our 2026/27 net profit estimates by 30%/25% to factor in higher operating expenses during the expansion period, we expect a faster 2026-28 net profit CAGR of 43% (vs. 31% 2025-27e net profit CAGR before).

Benefiting from both memory and logic capacity expansion. In memory, CXMT/YMTC's c.8%/c.13% global DRAM/NAND share remains well below China's c.25%/c.30% share of demand (source: company data, TrendForce), leaving significant room for domestic substitution, while the two companies' potential IPO fundraising could support further expansion amid the memory price upcycle. In logic, China's reported plan to expand advanced capacity by c500k wafers before 2030 (Reuters, 25 February 2026), and USD9.8bn of Dutch lithography imports in 2025 (+3% yoy, but ASP +37% yoy, per GACC statistics) all point to a step-up in advanced foundry capex. NAURA's broad platform strategy positions it well to capture this cycle, with cross-process product coverage enhancing tool-level synergy. We, hence, expect its orders from memory/logic customers to grow 50%/+30%+ in 2026.

Unlocking incremental TAM in glass substrate market. We estimate equipment and materials account for c10% of the USD11.3bn glass substrate market by 2032. The shift to glass mandates Physical Vapor Deposition (PVD) for seed layer deposition, where NAURA already has a commercial foothold. In addition, NAURA offers the yield-critical descum and PIQ equipment, with upcoming electroplating tool leveraging its existing TSV expertise (source: company data). NAURA is rapidly evolving into a comprehensive solution provider, and we believe it is well positioned to capture a growing share in the glass substrate market.

Maintain Buy; raise TP to RMB1,031.90. We continue to value the stock with a PS multiple. We apply 2027e 11.7x PS target multiple (previously 7.5x), in line with its global peers' average as our 2026-28e revenue CAGR of 27% (previously 2024-27e revenue CAGR of 29%) is largely in line with the global peers' average revenue CAGR of 26%. Against our 2027e revenue per share of RMB88.20 (previously 2026e revenue per share of RMB70.88), we raise our target price to RMB1,031.90 (from RMB528.40), implying c23% upside from the current level. We maintain our Buy rating. The release of its TGV ECP equipment could be a share price catalyst. See [page 5](#) for **key downside risks**.

Source: Company data, HSBC Qianhai Securities estimates

We decrease our 2026-27e EPS estimates by 31% and 25%, respectively, as we:

- ◆ Trim our 2026 revenue estimates by 2%, mainly as we factor in: 1) rising demand from domestic memory and advanced logic customers, while hedged by the shrinking orders from solar cell manufacturers, and 2) better than expected performance of electronic component business, driven by the solid demand from large-scale customers.
- ◆ Decrease our 2026 and 2027 blended GPM estimates by 1.6ppt and 1.8ppt, respectively, mainly to factor in: 1) the consolidation of Kingsemi, given that Kingsemi's semiconductor equipment has a lower GPM than Naura's, and 2) the rising price burden brought by market share competition in certain area.
- ◆ Increase our total operating expenses estimates by 19%/16% in 2026-27e, given that Naura is rapidly expanding its personnel scale in this year and the next. We expect the proportion of operating expense to decrease in 2028e.

With this report, we also introduce our 2028 revenue estimate of RMB81,302m and net profit estimate of RMB14,204m.

Looking into 2Q26 results, we forecast sales of RMB10.5bn and net profit of RMB1.6bn, with the sales roughly in-line with the market consensus, but net profit lower given we factor in the higher-than-expected operating expenses this year, with a target personnel expansion of 4-5k new employees throughout 2026. Though this might bring short-term net profit pressure to the company, we believe this decision will enable Naura to improve its R&D ability and service quality, and thus benefiting it in the longer timeframe.

Exhibit 6. HSBC Qianhai Securities estimates vs consensus

(RMB m)	Revenue			Earnings		
	2026e	2027e	2028e	2026e	2027e	2028e
HSBC est.	50,468	64,003	81,302	6,980	9,733	14,204
Consensus	50,455	63,971	80,369	7,731	10,762	14,075
Diff.	0%	0%	1%	-10%	-10%	1%

Source: HSBC Qianhai Securities estimates

Our revised 2026-28e net profit estimates are -10%, -10%, and 1% relative to Wind consensus, as we factor in the rising administrative costs and R&D costs in the expansion period in 2026-27. However, we believe this aspect has been reflected by Naura's slower share price increase of 57% during the past two month vs. 72% for semiconductor equipment Index during the same period.

Exhibit 7. 2026e net profit sensitivity analysis on IC equipment sales growth and GPM

		Growth rate in IC equipment sales				
		22%	28%	35%	42%	49%

	44.2%	2%	7%	11%	16%	21%
	46.2%	12%	18%	23%	28%	33%

Source: HSBC Qianhai Securities estimates

Valuation and risks

Given the company's net profit will be impacted by the rising operating expenses in the expansion period, we continue to value the stock with a PS multiple. We forecast a 2026-28e revenue CAGR of 27% (was 2024- 27e revenue CAGR of 29%), roughly in-line with its global peers' average revenue CAGR of 26%. We now use its global peers' average as a reference since we believe the whole sector is undergoing a round of re-rating with the rapid demand growth of computing power. Thus, we value the stock with 2027e 11.7x PS target multiple (in-line with its global peers' average; previously 7.5x). Against our 2027e revenue per share of RMB88.20 (2026 revenue per share estimate of RMB70.88 earlier), we raise our target price to RMB1,031.90 (from RMB528.40), implying c23% upside. The release of its TGV ECP equipment could be a share price catalyst.

Key downside risks

- ◆ **Slowdown in domestic semi equipment capex.** IC equipment is one of the company's key revenue growth drivers. Any slowdown in semi capex will negatively impact Naura's sales outlook.
- ◆ **Slower-than-expected progress in new equipment R&D.** Naura keeps a high level of R&D investment for expanding its product coverage. Slower progress in R&D projects may hinder revenue growth.
- ◆ **Glass substrate design wins coming in below expectations.** We estimate Naura will benefit from the domestic investment in glass substrate technology. Delayed or below expected investment or design wins will put downside risk to our revenue assumption.

Important disclosures

Equities: Stock ratings and basis for financial analysis

HSBC and its affiliates, including the issuer of this report ("HSBC") believes an investor's decision to buy or sell a stock should depend on individual circumstances such as the investor's existing holdings, risk tolerance and other considerations and that investors utilise various disciplines and investment horizons when making investment decisions. Ratings should not be used or relied on in isolation as investment advice. Different securities firms use a variety of ratings terms as well as different rating systems to describe their recommendations and therefore investors should carefully read the definitions of the ratings used in each research report. Further, investors should carefully read the entire research report and not infer its contents from the rating because research reports contain more complete information concerning the analysts' views and the basis for the rating.

From 23rd March 2015 HSBC has assigned ratings on the following basis:

The target price is based on the analyst's assessment of the stock's actual current value, although we expect it to take six to 12 months for the market price to reflect this. When the target price is more than 20% above the current share price, the stock will be classified as a Buy; when it is between 5% and 20% above the current share price, the stock may be classified as a Buy or a Hold; when it is between 5% below and 5% above the current share price, the stock will be classified as a Hold; when it is between 5% and 20% below the current share price, the stock may be classified as a Hold or a Reduce; and when it is more than 20% below the current share price, the stock will be classified as a Reduce.

Our ratings are re-calibrated against these bands at the time of any 'material change' (initiation or resumption of coverage, change in target price or estimates).

Upside/Downside is the percentage difference between the target price and the share price.

Prior to this date, HSBC's rating structure was applied on the following basis:

For each stock we set a required rate of return calculated from the cost of equity for that stock's domestic or, as appropriate, regional market established by our strategy team. The target price for a stock represented the value the analyst expected the stock to reach over our performance horizon. The performance horizon was 12 months. For a stock to be classified as Overweight, the potential return, which equals the percentage difference between the current share price and the target price, including the forecast dividend yield when indicated, had to exceed the required return by at least 5 percentage points over the succeeding 12 months (or 10 percentage points for a stock classified as Volatile*). For a stock to be classified as Underweight, the stock was expected to underperform its required return by at least 5 percentage points over the succeeding 12 months (or 10 percentage points for a stock classified as Volatile*). Stocks between these bands were classified as Neutral.

*A stock was classified as volatile if its historical volatility had exceeded 40%, if the stock had been listed for less than 12 months (unless it was in an industry or sector where volatility is low) or if the analyst expected significant volatility. However, stocks which we did not consider volatile may in fact also have behaved in such a way. Historical volatility was defined as the past month's average of the daily 365-day moving average volatilities. In order to avoid misleadingly frequent changes in rating, however, volatility had to move 2.5 percentage points past the 40% benchmark in either direction for a stock's status to change.

Rating distribution for long-term investment opportunities

As of 31 March 2026, the distribution of all independent ratings published by HSBC is as follows:

Buy	59%	(12% of these provided with Investment Banking Services in the past 12 months)
Hold	36%	(12% of these provided with Investment Banking Services in the past 12 months)
Sell	6%	(6% of these provided with Investment Banking Services in the past 12 months)

For the purposes of the distribution above the following mapping structure is used during the transition from the previous to current rating models: under our previous model, Overweight = Buy, Neutral = Hold and Underweight = Sell; under our current model Buy = Buy, Hold = Hold and Reduce = Sell. For rating definitions under both models, please see "Stock ratings and basis for financial analysis" above.

For the distribution of non-independent ratings published by HSBC, please see the disclosure page available at <http://www.hsbcnet.com/gbm/financial-regulation/investment-recommendations-disclosures>.
