

KOREA WEEKLY KICKSTART

KOSPI down by 5% amid continued volatility and foreign outflows despite broader market breadth

- KOSPI down by 5% amid continued volatility and foreign outflows despite broader market breadth. The Construction, Software and Chemicals sectors outperformed this week, while Tech, Insurance and Securities sectors underperformed the most ([Exhibit 15](#)).
- Foreign investors continued to sell the KOSPI market, driven by outflows for KOSPI Tech ([Exhibit 42](#)).
- KOSPI 12m-forward EPS was revised up by +2.3%. The Pharmaceutical sector saw the strongest upward earnings revisions, while the Securities sector was revised down the most this week ([Exhibit 29](#)).
- The KRW strengthened 1.5% vs. USD this week. It also strengthened 1.8% vs. EUR but weakened 2.3% vs. JPY.
- The latest Korea Equity Risk Barometer (GSSRKERB Index) is at -1.1, staying in a risk-averse territory.

downtrend or a sharp correction within a larger bull market, we assess the semiconductor memory segment, retail leverage, the non-memory segment, and the market risk/reward set-up and conclude the market is pricing a more negative fundamental outlook than warranted. We stay overweight and retain our KOSPI 12,000 12m index target. We favor key themes, GS analyst Buy-rated stocks, and risk reversal option strategies.

- **ERLI Pulse Check** : While regional earnings momentum remains positive, our earnings revision leading indicator (ERLI) indicates a moderating upgrade trajectory due to slowing macroeconomic activity. Korea's earnings upgrades should persist, though at softer pace given weaker manufacturing PMI expansion and decelerating DRAM price growth and export growth.
