

China AI Foundation Models | Asia Pacific

Intelligence War Over Price War

WHAT'S CHANGED

Z.AI CO., LTD. (2513.HK)	From	To
Price Target	HK\$990.00	HK\$1,700.00
MiniMax (0100.HK)		
Price Target	HK\$1,100.00	HK\$900.00

We view China’s LLM industry as building a healthier commercialization environment—as opposed to the market consensus that China’s open-weight models will drive commoditization and a price war.

We see China LLMs accelerating commercialization in a positive way, from price competition to intelligence-driven monetization. Three shifts underpin our view. First, pricing is turning more rational, with DeepSeek’s latest API price increase signaling improving industry pricing discipline. Second, open-weight monetization is tightening as vendors move toward more restrictive licenses and expand from 1P API sales to 3P revenue sharing. Third, model scale is stepping up, with Kimi K3’s 2.8T and Qwen3.8-Max’s 2.4T parameters marking China’s entry into the large-parameter era. As frontier models scale, rising requirements for capital, compute, infrastructure optimization and engineering execution should widen competitive moats, favoring well-resourced leaders and accelerating industry consolidation. Together, we believe these trends point to better monetization, higher barriers to entry and further industry consolidation.

Intelligence, not price, remains the ultimate moat: Frontier players can move down-market with cheaper models; average-model vendors face a much harder path moving up to SOTA. As training and compute requirements rise, we believe winners will increasingly be those that can sustain the flywheel of better models → stronger monetization → more funding and compute → greater model investment. Commercialization and AGI are therefore complementary, in our view: better monetization funds intelligence, while better intelligence drives monetization.

Stock views: Within our coverage, we see this flywheel forming faster at **Z.ai**: GLM-5.2, improving compute access and fresh financing support stronger growth, driving our 2026 ARR estimate to US\$2bn and PT to HK\$1,700. We remain constructive on **MiniMax**, with the upcoming M3 update and 2-3T M3 Pro as key catalysts, but see a more back-end-loaded growth trajectory; we maintain our US\$1bn 2026 ARR forecast and lower our PT to HK\$900. Although we are positive in China LLMs’ competitive dynamics, we lower our bear case multiples to reflect possibilities of intensified competition whereby global peers launch better models with lower prices. We also raise 2027e R&D expenses above US\$1bn for both companies to reflect much higher investment needed for training large parameter models. We are also bullish on **Alibaba** for its full AI stack and advantages in compute, with multiyear cloud growth and intact margin expansion.

Investment Thesis

We are bullish on China LLM pricing trends. On 8 August, DeepSeek announced a significant API price increase, marking a notable shift for a vendor that has historically combined competitive performance with industry-low pricing. We see three likely drivers: 1) strong demand for V4 models supporting greater pricing power; 2) the need to balance market-share gains with healthy gross margins to fund continued frontier-model investment; and 3) potentially higher inference costs from greater use of domestic chipsets. We see this as a positive signal for industry pricing discipline: price wars are unlikely to be a sustainable competitive strategy. As model intelligence and scale continue to improve, we expect pricing for new Chinese LLMs to trend higher, with competition increasingly shifting from price to capability and capacity.

More importantly, **we believe model intelligence—not price—is the key determinant of long-term competitive positioning in LLMs.** As discussed in [More Bang For The Buck \(27 Apr 2026\)](#), we expect the LLM market to bifurcate into a high-end segment, differentiated by frontier-level intelligence, and a low-end segment, where model capabilities are increasingly comparable and price competition is more intense. However, we do not believe these two segments will necessarily be served by different vendors. Frontier model developers can relatively easily offer lower-cost, lower-capability variants to address the mass market, while the reverse—moving from an average model to the frontier—is considerably more difficult.

This asymmetry matters because sustaining frontier intelligence requires continuous and substantial investment in model training. In our view, pursuing market share primarily through aggressive pricing of lower-tier models could therefore be a risky strategy at this stage of the industry. Lower gross margins may constrain internally generated funding for frontier model development, while a weaker technology position could also make external financing more difficult to secure. **We therefore view commercialization and the pursuit of AGI as complementary rather than separate objectives:** commercialization provides the financial resources required to sustain investment at the frontier, while frontier capabilities underpin long-term monetization and competitive differentiation.

Commercialization accelerating: tighter open-weight licenses and a shift from 1P to 3P monetization. Chinese LLMs have historically been associated with permissive open-weight models, with Apache 2.0/MIT (L1) licenses allowing broad third-party deployment and commercialization. As model capabilities improve, however, we see vendors increasingly migrating toward more restrictive L2/L3 licenses that retain open weights while limiting commercial usage. For example, Moonshot's K3 license requires MaaS providers generating >US\$20mn in annual revenue from model distribution to negotiate separate commercial terms, while Reuters (Aug 7) reported that Alibaba may introduce revenue-sharing requirements for large-scale users of future open-weight Qwen models.

We see this as another positive monetization signal for the China LLM industry. Tighter licenses could extend monetization beyond direct API sales (1P) toward revenue sharing with CSPs and model aggregators (3P), expanding the addressable ARR pool beyond the compute capacity owned or rented by LLM vendors themselves.

Exhibit 5: AI foundation model license categories

Level	License Category	Definition	Weights Available	Commercial Use	Fine-tuning / Derivatives	Redistribution	MaaS / API Commercialization	Key Restrictions
L1	Permissive Open Source	Model weights are released under standard permissive licenses such as Apache 2.0 or MIT, allowing unrestricted commercial use, modification and redistribution subject to limited license requirements.	Yes	Yes	Yes	Yes	Yes	Minimal restrictions; typically requires retention of copyright/license notices; Apache 2.0 also includes explicit patent provisions
L2	Commercial Open-weight	Model weights are publicly available and commercial use is generally permitted, but custom license terms may impose revenue, scale, attribution, redistribution or MaaS-related restrictions.	Yes	Yes, with conditions	Yes	Yes, with conditions	Yes, with conditions	May include revenue, user-scale, attribution, redistribution, usage, or MaaS restrictions
L3	Non-commercial Open-weight	Model weights are publicly available for research or non-commercial use, while commercial deployment requires separate authorization or a commercial license.	Yes	No, unless separately licensed	Yes, for permitted non-commercial purposes	Usually limited	No, unless separately licensed	Commercial use is prohibited or requires separate authorization from the model provider
L4	Closed / API-only	Model weights are not publicly available; third parties access the model primarily through first-party or authorized APIs and products.	No	Yes, through approved services/APIs	Generally no	No	Yes, through provider API	No access to model weights; usage governed by provider terms, API policies and pricing

Views on open-weight models: more adoption, not less compute. We believe investor concerns that cheaper, more efficient open-weight models could structurally reduce AI infrastructure demand are overstated. Instead, lower inference costs should drive higher usage through Jevons Paradox, accelerating AI diffusion. Adoption is already meaningful—63% of surveyed enterprises use open models alongside closed models—though deployments remain concentrated in use cases requiring high frequency, customization or data control.

Open weights offer compelling economics, customization and deployment flexibility, but are not “free”: hosting, fine-tuning, engineering, security and liability remain meaningful costs. We therefore expect open and closed models to coexist rather than converge to a winner-takes-all market, driving an increasingly multi-model enterprise stack and creating incremental value for routing, orchestration, observability, governance and security.

(Please refer to [Global Thematics: Weighing In: Open-Weights Models & 3 States of the World \(3 Aug 2026\)](#) for more details on open-weight models).

Chinese LLMs are entering the large-parameter era—raising the competitive bar.

Through 1H26, Chinese open-weight LLMs generally remained below 1T total parameters. This began to change in July 2026, when Kimi K3 launched with 2.8T parameters, becoming the first major Chinese open-weight model to cross the 2T threshold. Its strong performance globally provides further evidence that scaling remains an effective path to improving model intelligence. We expect 2-3T parameters to increasingly become the baseline for frontier Chinese models in 2H26, with several large-scale launches potentially ahead, including MiniMax M3 Pro in Sep-Oct, Zhipu’s next-generation GLM model in October, and potentially Alibaba’s Qwen4. Media reports (LatePost, Aug 6) also suggest ByteDance is exploring a 5T+ parameter model.

Exhibit 7: Upcoming LLM pipeline

Source: Company data, Morgan Stanley Research

Bigger models, higher barriers: Contrary to the view that LLMs face limited barriers to entry, we believe the transition toward larger models—particularly those with higher active parameter counts—should widen the competitive moat. Scaling requires not only greater training investment and compute, but also stronger capabilities in inference efficiency and infrastructure optimization. In our view, this increasingly tests vendors across model know-how and architectural judgment, systems engineering, organizational execution, financing and compute sourcing. As frontier model sizes continue to scale, the capital and execution requirements should rise accordingly, favoring well-resourced leaders and driving further consolidation of the LLM market.

Z.ai: Forming the Flywheel

What has been priced in: from China No.1 to Tier 1. Z.ai shares rose c.13x from its January 2026 IPO through early July, significantly outperforming the HSTECH Index's c.14% return over the same period. However, following Kimi K3's launch on 17 July, the stock corrected by >50% at its trough. We attribute much of this volatility to a reset in market expectations around Z.ai's competitive positioning: from perceived China No.1 following GLM-5.2's launch, back to a Tier-1 player after the larger-scale K3 surpassed GLM-5.2 on key performance benchmarks.

We believe the market may be over-emphasizing point-in-time model rankings. The No.1 position has historically rotated even among leading US model developers, and we would expect similar—if not greater—rotation in China as model release cycles accelerate. In our view, the more important question is not whether Z.ai holds the No.1 position at any given point in time, but **whether it can sustain a positive development flywheel: leading model capabilities → stronger user adoption and monetization → greater reinvestment into training and compute together with enhanced financing channels → continued model improvement.** We see the ability to sustain this cycle, rather than temporary benchmark leadership, as the more durable determinant of long-term competitive positioning.

We see Z.ai forming such a flywheel:

1. **World-class model performance:** GLM-5.2 has reached global top LLMs' performance level not just in the benchmarks but also in global developers' community feedbacks, boosting Z.ai from China's to top LLM player to a leading global player. On June 16, Z.ai's Chief Scientist, Jie Tang, stated on X that the company would release a model matching the current best-performing LLM developed by the US before 1Q27, pointing to a rapid iteration trajectory on top of GLM-5.2. We expect Z.ai to reach this target earlier, in Oct 2026, with its large parameter version and return to the SOTA position.
2. **Improving compute supply:** Inference compute has always been a constraint to Z.ai's ARR growth and especially for overseas compute. Recently Z.ai has been in negotiations with AWS, and GLM-5.2 API has been integrated into AWS Marketplace. We expect such 3P business model to further expand to other overseas CSPs and API platforms, tackling overseas compute constraints.
3. **Positive financing cycles:** On July 13, Z.ai completed an H-share equity placement by raising HK\$31.4bn (US\$4bn) with 4.25% dilution. The company aims to allocate 55% (US\$2.2bn) of the funding to model training and compute expansion. Meanwhile, a potential A-share listing could provide another Rmb15bn in funding. With more funding, the company could generate more revenue from expanded compute and further reinvest into model training, forming a positive development cycle.

Downside risk - will Chinese governments curb AI model exports? Reuters on July 7 reported that the Chinese government is looking to curb overseas access to China's top AI models with Bytedance, Alibaba and Z.ai specified. We don't think this is material for multiple reasons. The Chinese government has always encouraged exports of high tech,

including AI. Data security issues exist in out-reaching access to foreign models rather than incoming access to domestic models. Most Chinese models are open-weight, and technically open-weight models can't be "curbed" for access. Only Bytedance, Alibaba and Z.ai were mentioned, and not DeepSeek or Moonshot, which are also considered current tier one players in China. However, we believe the greater downside risk is from the US government side.

Z.ai's future roadmap: In Z.ai's internal letter released on July 11, Jie Tang pointed out the company's focus on AGI with next few technology milestones to cross from long-horizon tasks, autonomous agent system to self-evolving. With these targets, Z.ai released the "Touch High" plan to prioritize AGI targets over short-term commercialization, strategically investing in long-horizon tasks, autonomous agent system, fully self training and extreme security governance, at the same time remaining open-weight to support ecosystem development.

ARR and valuation: Z.ai disclosed that its ARR already hit its full-year target of US\$1bn in 1H26. We expect Z.ai's ARR growth to accelerate after GLM5.2's launch, together with inference compute supply expansion in 2H26. We raise our 2026 ARR estimate from US \$1bn to US\$2bn. Our 2026 bull and bear case ARR estimates are US\$3bn and US\$1.5bn, respectively. Our bull base reflects Z.ai's greater than expected compute expansion, especially overseas, while our bear case incorporates intensified competition whereby competitors launch better models with lower prices.

MiniMax: Why We Remain Optimistic

What has been priced in: disappointment in M3 release and large-volume unlock.

MiniMax's share price rose 38% since IPO, significantly underperforming Z.ai especially after M3 was released on Jun 1. Despite M3 also achieving high ranking, it benchmarks with good agentic and full-modality understanding capabilities; its small size (428B total parameters and 23 active parameters), doubled price vs. M2.7 and relative shortage in coding has triggered negative feedback from developer communities, leading to a drop in share price to the trough by 77% since Jun 1. In addition, MiniMax's cornerstone and pre-IPO investor unlock on Jul 8 released 10x free float (from 5.44% of total shares to 54.38% of total shares), leading to greater selling pressure.

However, we are not as negative on MiniMax:

1. **Multiple new LLM upgrades to be released:** We view M3 more as an experimental LLM to test new architecture (MiniMax Sparse Attention) before scaling up to large-size models. The experiment has been successful in terms of inference efficiency improvement in a longer context length at 1M tokens, and we expect the M3 series model to generate higher gross margin than M2 series despite API price ending up the same with the M2 series. Although the current M3 is less than a full version model, we expect the company to release an upgrade in Jul-Aug with progressive post-training to enhance coding capability. MiniMax announced that the M3 Pro with 2.7T total parameters will come out in Sep-Oct, which should deliver advanced performance being the largest Chinese LLM so far, as well as demonstrating pricing power.
2. **LLM is more than coding:** We believe coding is the first AI scenario that has crossed the technology tipping point and commercialization inflection point. And coding capability is one of the most important capabilities of LLMs due to its strong generalization feature as well as being the foundation of model self-evolving. However, we believe LLM will penetrate into more productivity scenarios, expanding from the programmer market to the broader knowledge worker market including law, finance, consulting and healthcare, which can't be simply satisfied with coding capability. MiniMax has been focusing on vertical industry training data and its 10x Team initiative (kick-started in May 2026) has been recruiting experts from various industries. The company could potentially stand out when AI competition shifting from coding to other verticals.
3. **Multi-modality is underappreciated:** Capital markets' attention appears fully allocated to LLMs rather than multi-modal models. And MiniMax has suspended its multi-modal model releases since Hailuo 2.3 in Oct 2025 to concentrate investment in next generation development, which has created a lull in its multi-modality update. However, we believe the multi-modality market, and especially the video model market, bears substantial commercial value with less competition compared to LLM markets. [MiniMax's H3](#) released in July 2026 has outperformed global peers and received positive feedback. We expect H3 to re-accelerate MiniMax's multi-modality ARR growth.
4. **Positive financing cycles:** On July 10, MiniMax announced plans to conduct an equity placement by raising HK\$9.5bn (US\$1.2bn) with 10.19% dilution. At the same time, it launched a 1-year convertible bond issuance to raise HK\$6.5bn (US

\$0.8bn) at a conversion price of HK\$335. The company aims to allocate 80% (US \$1.6bn) of the placement and CB funding to model training and inference compute expansion, and 10% to accelerate Harness products global commercialization as well as development. A potential A-share listing could further expand the funding channels. With more funding, the company could generate more revenue from expanded compute and further reinvest into model training, forming a positive development cycle.

Managements remains AGI-driven: MiniMax's founder and CTO Dr. Yan Junjie stated in an internal letter on July 10 that he will not claim salary until the company reaches AGI. And over the next four years, he would also donate 4% of the company's shares from his personal accounts to incentivize company employees, as well as 1% of the company's shares to establish a special fund to support open community development.

ARR and valuation: We expect H3 and M3 Pro to be the major ARR growth drivers for MiniMax in 2026. However, since both models are to be released in 3Q26, their ARR contribution in 2026 will be limited. We maintain our 2026 ARR estimate for MiniMax at US\$1bn (vs. company guidance at US\$1bn+). Our bull and bear case 2026 ARR estimates are US\$1.5bn and US\$500mn, respectively. Our bull case reflects MiniMax launching SOTA LLM models. Our bear case incorporates intensified competition whereby competitors launch better models with lower prices.

What's Changed

Company

Z.ai

Estimate revisions

We raise our revenue forecasts by 37.3%, 53.1% and 56.7% for 2026, 2027, and 2028, respectively, to reflect better ARR growth expectations driven by GLM-5 series. Our operating loss estimates are changed by -2.6%, +9.5% and -556.5% as a mixed result of high revenue forecasts and higher R&D expenses forecasts. All told, our non-IFRS EPS forecasts are revised by -5.2%, -4.1% and +127.6%.

MiniMax

We increase our revenue forecasts by 104.2%, 71.1% and 99.2% for 2026, 2027, and 2028, respectively, to reflect better ARR growth expectation driven by the M3 and H3 series. Our non-IFRS operating loss estimates widen by 15.1%, 39.7% and 49.8% as a mixed result of high revenue forecasts and higher R&D expenses forecasts. All told, our loss per share forecasts are revised by +7.9%, +4.1% and +75.9%.

Risk Reward – Z.AI CO., LTD. (2513.HK)

Global Frontier AI LLM

PRICE TARGET HK\$1,700.00

We apply discounted cash flow (DCF) methodology to value the company, assuming a 15% WACC and 3% terminal growth. Our price target implies 42x P/S for 2027.

Consensus Price Target Distribution

Source: Refinitiv, Morgan Stanley Research

RISK REWARD CHART

Key: — Historical Stock Performance ● Current Stock Price ◆ Price Target

Source: Refinitiv, Morgan Stanley Research

OVERWEIGHT THESIS

- Z.ai is exposed to the early-stage, fast-growing global AI foundation model market, focused on productivity scenarios, with a rising proportion of cloud revenue and improving model API pricing.
- We see positive signals reinforcing its leading position after the release of its latest flagship, GLM5.2.
- We project break-even in 2028 as revenue expansion outgrows R&D costs. We expect Z.ai's ARR growth to accelerate further after the launch of GLM5.2.
- Our DCF-derived price target implies 42x 2027e P/S, in line with global peer valuations.

Consensus Rating Distribution

Source: Refinitiv, Morgan Stanley Research

Risk Reward Themes

- Disruption: Positive
- New Data Era: Positive
- Secular Growth: Positive

BULL CASE

HK\$3,340.00

40x 2027e P/S

Z.ai launches a global SOTA model with superior performance vs. peers and expands its customer base through cloud-based API sales with continuous price hikes, leading to non-linear revenue growth in 2027. Revenue of Rmb33.8bn in 2027.

BASE CASE

HK\$1,700.00

42x 2027e P/S

Z.ai consistently launches foundation models that match global SOTA model performance and expand its customer base, mainly through cloud-based API sales, leading to non-linear revenue growth in 2027. Revenue of Rmb15.4bn in 2027.

BEAR CASE

HK\$670.00

20x 2027e P/S

Z.ai fails to keep up with global SOTA model performance, leading to linear revenue growth rather than step-change growth in 2027. Revenue of Rmb13.5bn in 2027.

Risk Reward – Z.AI CO., LTD. (2513.HK)

KEY EARNINGS INPUTS

Drivers	Dec 2025	Dec 2026e	Dec 2027e	Dec 2028e
Revenue growth (%)	131.9	625.7	192.5	139.7
GP Margin (%)	41.0	34.1	37.3	41.5

Risk Reward – MiniMax (0100.HK)

Global Omni-model Leader

PRICE TARGET HK\$900.00

We use a discounted cash flow (DCF) methodology to value the company, assuming a 15% WACC and 3% terminal growth. Our PT implies 32x P/S for 2027.

Consensus Price Target Distribution

Source: Refinitiv, Morgan Stanley Research

RISK REWARD CHART

Key: — Historical Stock Performance ● Current Stock Price ◆ Price Target

Source: Refinitiv, Morgan Stanley Research

OVERWEIGHT THESIS

- We see significant global opportunities for AI foundation models driven by model performance breakthroughs with non-linear market expansion potential.
- We like MiniMax's strong industry position based on advanced technology, full-modality capabilities, diverse AI applications and highly scalable business model.
- The stock currently trades at 12x 2027e P/S based on our estimates and our DCF-derived PT implies 32x 2027e P/S. We see upside in the stock's valuation.

BULL CASE	HK\$2,230.00	BASE CASE	HK\$900.00	BEAR CASE	HK\$220.00
40x 2027 P/S		32x 2027 P/S		20x 2027 P/S	
MiniMax's next-generation model, to be launched in mid-2026, becomes the global SOTA model with superior performance vs. peers, leading to rising customer demand, expanding market share and potential price hikes. We project 2027 revenue of US\$2.5bn.					
		MiniMax's next-generation model, to be launched in mid-2026, matches the performance of global SOTA models, leading to non-linear revenue growth in 2027. We project 2027 revenue of US\$1.2bn.		MiniMax's next-generation model, to be launched in mid-2026, fails to outperform peers in terms of performance, resulting in linear top-line revenue growth rather than step-change growth in 2027. We project 2027 revenue of US\$500mn.

Valuation Methodology and Risks

Alibaba Group Holding (BABA.N)

Base case, discounted cash flow model. Key assumptions include a 10% WACC and 3% terminal growth rate, in line with our Chinese Internet coverage range.

Risks to Upside

- Better core e-commerce monetization, driving earnings growth upside
- Faster enterprise digitalization, re-accelerating cloud revenue growth
- Stronger AI demand to drive cloud revenue

Risks to Downside

- More intense competition
- Higher-than-expected reinvestment costs
- Weaker consumption amid a slower post-Covid recovery
- Slower pace of enterprise digitalization pace
- Regulation - additional scrutiny of Internet platforms

Morgan Stanley Research has been published in accordance with our conflict management policy, which is available at www.morganstanley.com/institutional/research/conflict/policies. A Portuguese version of the policy can be found at www.morganstanley.com.br

Important Regulatory Disclosures on Subject Companies

As of July 31, 2026, Morgan Stanley beneficially owned 1% or more of a class of common equity securities of the following companies covered in Morgan Stanley Research: Alibaba Group Holding, Kingdee International Software Group, MiniMax, Wangsu Science & Technology.

Within the last 12 months, Morgan Stanley managed or co-managed a public offering (or 144A offering) of securities of Alibaba Group Holding, Kingsoft Cloud Holdings, Kingsoft Corp Ltd, MiniMax.

Within the last 12 months, Morgan Stanley has received compensation for investment banking services from Alibaba Group Holding, Kingsoft Cloud Holdings, Kingsoft Corp Ltd, MiniMax. In the next 3 months, Morgan Stanley expects to receive or intends to seek compensation for investment banking services from Alibaba Group Holding, Beijing Kingsoft Office Software Inc, Chinasoft International Ltd, Glodon Co. Ltd., Hundsun Technologies Inc., Kingdee International Software Group, Kingsoft Cloud Holdings, Kingsoft Corp Ltd, Meitu Inc, MiniMax, Tuya Inc., Yonyou Network Technology Co Ltd, ZAI CO., LTD..

Within the last 12 months, Morgan Stanley has received compensation for products and services other than investment banking services from Alibaba Group Holding, Kingsoft Corp Ltd.

Within the last 12 months, Morgan Stanley has provided or is providing investment banking services to, or has an investment banking client relationship with, the following company: Alibaba Group Holding, Beijing Kingsoft Office Software Inc, Chinasoft International Ltd, Glodon Co. Ltd., Hundsun Technologies Inc., Kingdee International Software Group, Kingsoft Cloud Holdings, Kingsoft Corp Ltd, Meitu Inc, MiniMax, Tuya Inc., Yonyou Network Technology Co Ltd, ZAI CO., LTD..

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: Alibaba Group Holding, Beisen Holding Limited, Kingsoft Cloud Holdings, Kingsoft Corp Ltd, Tuya Inc..

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of July 31, 2026)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

Stock Rating Category	Coverage Universe		Investment Banking Clients (IBC)			Other Material Investment Services Clients (MISC)	
	Count	% of Total	Count	% of Total IBC	% of Rating Category	Count	% of Total Other MISC
Overweight/Buy	1529	42%	442	47%	29%	750	43%
Equal-weight/Hold	1582	43%	396	42%	25%	773	44%
Not-Rated/Hold	3	0%	1	0%	33%	1	0%
Underweight/Sell	560	15%	97	10%	17%	217	12%
Total	3,674		936			1741	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.

Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below.

Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

Important Disclosures for Morgan Stanley Smith Barney LLC Customers

Important disclosures regarding any material conflict of interest that can reasonably be expected to have influenced Morgan Stanley Smith Barney LLC's choice of a third-party research provider or the subject company of a third-party research report, are available on the Morgan Stanley Wealth Management disclosure website at www.morganstanley.com/online/researchdisclosures. For Morgan Stanley specific disclosures, you may refer to <https://www.morganstanley.com/eqr/disclosures/webapp/generalresearch>.

Each Morgan Stanley research report is reviewed and approved on behalf of Morgan Stanley Smith Barney LLC. This review and approval is conducted by the same person who reviews the research report on behalf of Morgan Stanley. This could create a conflict of interest.

Other Important Disclosures

A member of Research who had or could have had access to the research prior to completion owns securities (or related derivatives) in the Alibaba Group Holding. This person is not a research analyst or a member of research analyst's household.

Morgan Stanley Research policy is to update research reports as and when the Research Analyst and Research Management deem appropriate, based on developments with the issuer, the sector, or the market that may have a material impact on the research views or opinions stated therein. In addition, certain Research publications are intended to be updated on a regular periodic basis (weekly/monthly/quarterly/annual) and will ordinarily be updated with that frequency, unless the Research Analyst and Research Management determine that a different publication schedule is appropriate based on current conditions.

Morgan Stanley is not acting as a municipal advisor and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Morgan Stanley produces an equity research product called a "Tactical Idea." Views contained in a "Tactical Idea" on a particular stock may be contrary to the recommendations or views expressed in research on the same stock. This may be the result of differing time horizons, methodologies, market events, or other factors. For all research available on a particular stock, please contact your sales representative or go to Matrix at <http://www.morganstanley.com/matrix>.

Morgan Stanley Research is provided to our clients through our proprietary research portal on Matrix and also distributed electronically by Morgan Stanley to clients. Certain, but not all, Morgan Stanley Research products are also made available to clients through third-party vendors or redistributed to clients through alternate electronic means as a convenience. For access to all available Morgan Stanley Research, please contact your sales representative or go to Matrix at <http://www.morganstanley.com/matrix>.

Any access and/or use of Morgan Stanley Research is subject to Morgan Stanley's Terms of Use (<http://www.morganstanley.com/terms.html>). In addition you consent to Morgan Stanley processing your personal data and using cookies in accordance with our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html), including for the purposes of setting your preferences and to collect readership data so that we can deliver better and more personalized service and products to you. To find out more information about how Morgan Stanley processes personal data, how we use cookies and how to reject cookies see our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html). If you do not agree to our Terms of Use and/or if you do not wish to provide your consent to Morgan Stanley processing your personal data or using cookies please do not access our research. Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those

who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Such information is for your reference only. The reader should independently evaluate the investment risks and is solely responsible for their investment decisions. Morgan Stanley Research may not be distributed to the public media or quoted or used by the public media without the express written consent of Morgan Stanley. Any non-customer reader within the scope of Article 7-1 of the Taiwan Stock Exchange Recommendation Regulations accessing and/or receiving Morgan Stanley Research is not permitted to provide Morgan Stanley Research to any third party (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities regarding Morgan Stanley Research which may create or give the appearance of creating a conflict of interest. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation or a solicitation to trade in such securities/instruments. MSTL may not execute transactions for clients in these securities/instruments.
