FQ4 Preview & VAR Call Recap: Good Largely Already Known

CSCO checks support a strong FQ4 and a FY27 raise, but combination of valuation and relatively known strong demand conditions make quarter less of a catalyst. Stronger follow-through on EPS from pricing, efficiencies could be reason for more upside.

Key Takeaways

- F4Q expectations sit at ~30% Y/Y product order growth (~18% Y/Y ex-hyperscalers), ~\$4bn of AI orders.
- In terms of FY27 guidance, expects are for AI revenue targets to be walked up to \$6.5-7bn and for portfolio ex-AI to grow closer to 5-7% (from 4-6%).
- Channel commentary still very strong on Q2, though speaking to stronger 1H on pull-forward vs. 2H'CY26.
- Upside to gross margin commentary around memory pricing, or material op margin follow-through could help follow-through.
- See EPS as less of a catalyst given limited follow-through on other refresh / AI names (FFIV / FTNT / ANET); could be too conservative if margins surprise.

Peer commentary offers constructive read-throughs for CSCO's core business, although valuation raises the bar for follow-through. Checks and read-through results have been positive for Cisco; however, given more muted price action T+1 on very strong results (ANET (3)%, FFIV +2%, FTNT +1%), we think a strong enterprise beat / AI demand upside is largely built in heading into the print. We tend to see move on the quarter more driven by gross margin upside (ex any tariff refund) or commentary about operating leverage. At ~24x CY27e consensus EPS, we believe CSCO's follow-through will depend largely on margin visibility and supply procurement execution vs. just commentary on demand, where strong conditions more known.

Expectations into the print. While orders have become less meaningful of a KPI for Cisco with focus on AI, we see the expectation for the quarter being ~30% Y/Y (~18% Y/Y ex-cloud), or similar to last quarter on the ex-cloud business. We expect AI orders north of \$4bn, better than guidance of \$3.7bn. Excluding any tariff refund, we would expect ~50bps upside on GMs as upside on hardware outweighs pricing relief. We would expect only a small recovery in security Y/Y growth rate, as checks are still muted on Splunk. In terms of guidance, the company last quarter spoke to \$6bn of AI revenue in FY27 (50% growth over FY26) and 4-6% Y/Y growth on the rest of the business (pricing providing a 4-5% tailwind to FQ3 / FQ4). The ex-cloud business should definitely move to ~5-7% Y/Y, but we would be cautious on much more given what we expect to be a strong Q4. AI revenue realistically needs to be

raised to \$7bn (\$9bn of orders in FY26, most of that is delivered in 12 months) as that number gradually moves higher. In terms of an AI orders target, off \$9bn this year, investors expect \$12bn, but may not need to see that all on the Q4 call.

We hosted our off-cycle quarterly VAR call on Thursday, August 6th. More detailed notes are available from our VAR call upon request.

Recapping key points from our VAR call:

(+) Strong 1H, but 2H looks more measured. One VAR expert described the quarter as very strong, while another saw CSCO activity tick down modestly from 1Q but remain well above plan. Price increases, AI preparedness, and refresh activity all brought demand forward, although experts could not isolate the contribution from each. Budgets are not increasing, and many enterprise customers deployed a large share earlier in the year, supporting in-line rather than accelerating expectations for 2H. Federal activity appears better positioned entering the new fiscal cycle.

(+) Refresh demand is broader and more architecture-driven than expected. Campus and data center projects remain the core strength, with customers upgrading not only for traffic growth but also to collect and move more telemetry into AI engines. Importance of the signaling layer is becoming more visible as enterprises evaluate performance, analytics, and data availability, which should support continued refresh demand even as the price-driven pull-forward normalizes. Pent-up demand was estimated at only 10-15% of the overall refresh opportunity, suggesting remaining runway if macro conditions hold.

(=/-) Longer lead times support backlog but create fulfillment risk. Some Cisco, Arista, and HPE products that were available in ~12-13 weeks are now stretching toward 30-40 weeks, while larger optical systems can extend further. Availability is increasingly outweighing brand preference when cost is reasonable, and customers are choosing suppliers that can ship. Cisco backlog and bookings are growing in some channels, but lower fulfillment and elongated sales cycles could shift revenue timing and limit near-term upside.

(-/+) Competitive intensity is rising, although Cisco's installed base remains a meaningful advantage. HPE/Juniper is drawing attention through coordinated marketing, channel certification, and a more credible single-vendor message, with current friction centered more on people and account coverage than product quality. Arista is gaining data center and large-enterprise traction, particularly where availability and technical positioning resonate. CSCO continues to benefit from customer stickiness, strong education exposure, and channel execution, but higher growth at competitors suggests a rising tide is not lifting all vendors equally.

(=/-) Public sector and broadband can help 2H, but timing remains uneven. Federal activity has started well, and security spending could rise, while BEAD and broader broadband funding remain potential demand drivers. Funds have reached states but not always service providers, proposals are being refreshed frequently, and fiber and component shortages are extending project timelines. Higher lead times may support a better service provider second half, though revenue realization could lag bookings.

(-) Security remains a secondary part of the Cisco thesis. Customer concern around AI-related threats is high, but dedicated budgets remain limited, and most spending is focused on current needs rather than full architecture changes. Cisco's network-layer security message is beginning to gain relevance in all-Cisco environments, but VAR experts continue to see stronger momentum from PANW, Zscaler, and Netskope. Splunk remains exposed to incremental cap-and-grow behavior, with some telemetry and platform spending moving toward broader security offerings.

OVERWEIGHT THESIS

- Networking has positive market growth dynamics, like the Cat 9K refresh, which helps offset headwinds from share losses.
- Splunk acquisition offers meaningful opportunities for bull case eventually, but minimal expectations for the near term.
- Cloud AI business could help multiple if contribute meaningfully to growth.

BULL CASE \$170.00

32x CY27 bull case EPS (\$5.30)

Becomes a more material participant in AI; enterprise investment cycle allows for acceleration to continue. 10%+ of company growth from AI, able to benefit in outsized way from capacity, able to participate in multi-year investment cycle on the enterprise business, no material pullforward. Trades more in-line with AI names vs. traditional range.

BASE CASE \$130.00

26x CY27e EPS (\$5.00)

AI cycle help company sustain HSD growth for multiple years. AI business continues to gain share, enterprise business sees some benefit from AI investment, but pullforward in 1H limits upside to FY27. Trades at a premium to long term range given AI gains.

BEAR CASE \$80.00

20x CY27 bear case EPS (\$4)

Trades more in line with historical averages as pullforward offsets AI share gains. Enterprise faces headwinds in FY27 from macro headwinds, offsetting gains on the AI side, growth slows to MSD. Valuation falls to historical averages given margin headwinds.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of July 31, 2026)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.
