Asia Pacific Equity Derivatives Strategy

Buy cheap NKY calls into the year-end; TSMC earnings upside after strong sales; TSMC capex basket plays

- **Japan: Own Cheap Upside Optionality into Year-End**: We recommend using relatively cheap NKY optionality to **participate in a potential AI-led breakout**. Options look like the better upside expression here: **implied volatility has reset to more manageable levels**, calls provide convex participation, and **dealers moving back into short-gamma territory** could support spot-up / vol-up dynamics if AI/semi earnings momentum extends into year-end. Fundamentals remain supportive, with **Nikkei offering clean exposure to the theme** as AI-linked stocks account for ~50% of NKY weight. **Foreign positioning also leaves room for further re-risking**: flows have improved, but only marginally, with foreign investors not yet returning in size. At the same time, spot is near highs, **leadership is narrow**, and **AI-linked names carry higher margin balances and foreign ownership**, making the rally more sensitive to global tech sentiment. Alongside **macro sensitivity and choppier mid-term seasonality**, this points to a more uneven path, where cheap calls offer more attractive risk/reward.
- **Own the rally with NKY calls and USDJPY-contingent hybrids:** We recommend **Jan-27 NKY calls** as the clean vanilla implementation. For lower premium outlay, we like **NKY-up / USDJPY-down structures,** where adding a lower USDJPY condition significantly cheapens the upside exposure; low volatility in both NKY and USDJPY makes these hybrids attractively priced.
- **TSMC Earnings in Focus for Further Upside After Strong Sales**: **TSMC's strong September sales print supports the fundamental setup, but the October 15 earnings release remains the key confirmation point.** History suggests monthly sales are informative but do not consistently "settle" the earnings-day move: since 2020, across 27 instances where earnings followed shortly after sales, the average absolute move after earnings was 2.8% versus 1.5% after sales, and the earnings-day move exceeded the sales-day move in 19 of 27 cases. Moreover, the recent deceleration in foreign outflows also suggests incremental selling pressure may be closer to exhaustion. **Into the event, earnings vol screens cheap versus history across TSMC and TWSE.** Low implied-vol percentiles are consistent with underpriced event risk. This leans toward long-vol structures. At the same time, skew dynamics support selling calls on the upside. Investors can consider **2330 TT Dec26 call spread** to implement the view. For broader implementation, investors can consider TWSE upside as a proxy given TSMC's large index weight and our prior Apple supply chain framing. Investors can use vanilla **TWSE Dec26 calls**, or more cost-efficient **Mar27 TWSE calls contingent on USDTWD higher and TWSE-up / USDTWD-up dual digitals**.
- **Own the TSMC Capex Theme via Baskets: TSMC's capex plan is a clear medium-term theme**, with our analyst expecting US$64bn / US$86bn / US $100bn in 2026 / 2027 / 2028. With that backdrop, **the 3Q26 earnings call** is the next key catalyst to look for incremental evidence of 2026 capex upside and management's latest directional framing for 2027–28 spend. To express the theme more directly, we focus on the **capex beneficiaries**, whose sales tend to track the capex cycle more directly. We have built two baskets: **TSMC Japan**

Capex Beneficiaries (JPJPTSSC Index) for tool-order leverage into N3/N2/A14, and **TSMC Taiwan Capex Beneficiaries (JPTWTSSC Index)** for exposure to new fab phases plus CoWoS/SoIC additions, both positioned to reprice on upcoming capacity/ capex commentary even without a formal multi-year target. **Both baskets have lagged TSMC's second-half gain**; with implied volatility elevated (~35–45 vol), we recommend **zero-cost March 2027 call spread collars** on both. The March 2027 tenor covers the Oct 15th results and a potential Jan 2027 capex update. For a delta-one expression of the theme, we recommend **buying the baskets via long total return swaps.**

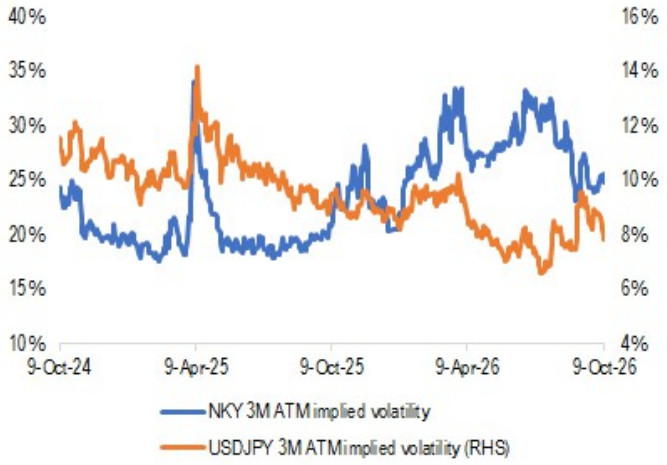

- **HSCEI: Long Gamma Persists, Vol Keeps Slipping Toward Lows**: Dealers are long roughly US$954mn of HSCEI gamma, or 13% of three-month average futures turnover, largely driven by investor call selling. With dealer hedging leaning against spot moves, HSCEI 1M ATM implied vol has continued to slide toward historical lows.

Japan: Own Cheap Upside Optionality into Year-End

We recommend **using cheap Nikkei upside options to participate in a potential breakout in the AI-led rally**. The case for owning calls has improved as **Nikkei implied volatility has moved back to more manageable levels**, just as the index has become more exposed to amplified moves. With spot near highs and the path into year-end likely to remain choppy, upside options offer a cleaner way to stay long the theme than adding outright delta after the sharp rally. For investors already long Japan, replacing part of existing delta with cheap calls can preserve upside participation while adding convexity and taking advantage of lower volatility levels.

The **options backdrop has become more supportive for upside convexity. Dealers have recently turned more short gamma** after a period of reduction; at a Nikkei spot level of around 69,000, we estimate dealers are short approximately **US$873mn of gamma, equivalent to around 4% of futures turnover**. Recent flows have been led mainly by puts, likely reflecting investors adding protection after the rally. However, the market is not pricing an aggressive downside tail, with put skew still near historical lows.

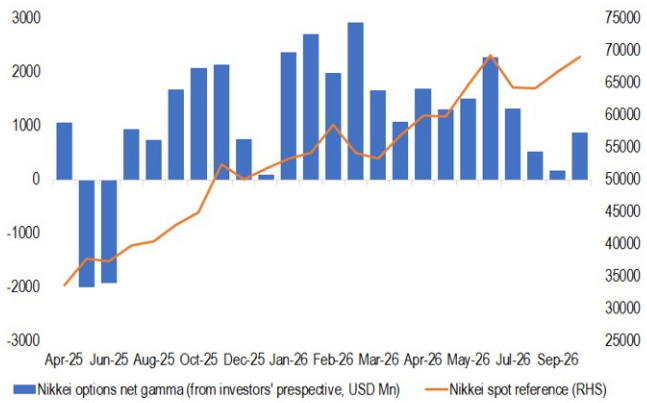

Short gamma makes calls more compelling. If earnings reinforce AI/semi momentum, positive shocks could trigger spot-up / vol-up dynamics as dealers hedge in the direction of the move. That improves the relative appeal of calls, particularly with leadership concentrated and index swings becoming sharper.

The fundamental case for upside remains intact, led by resilient AI/semi earnings momentum. Our equity strategists remain constructive on the broader earnings backdrop and expect reporting season to refocus markets on supportive fundamentals after recent macro volatility (see here). Semiconductors remain central to that view, with AI momentum, supply constraints and cyclical recovery expected to support strong results, further earnings revisions and continued equity outperformance. In Japan, upcoming results from AI-exposed large-cap stocks such as Tokyo Electron and Advantest could provide local validation, while positive U.S. AI results and capex commentary could reinforce the global theme.

This matters more for Nikkei than for broader Japan beta. AI-linked stocks account for 52% of Nikkei weight versus 29% for Topix, making Nikkei the cleaner Japan expression of improving AI/semi sentiment. Since mid-September, Nikkei has rallied 8.7% versus 2.0% for Topix, with AI contribution driving most of the move. The Nikkei/Topix ratio is back toward elevated levels, and swings could remain wider as investors rotate between AI-linked growth exposure and broader domestic Japan beta.

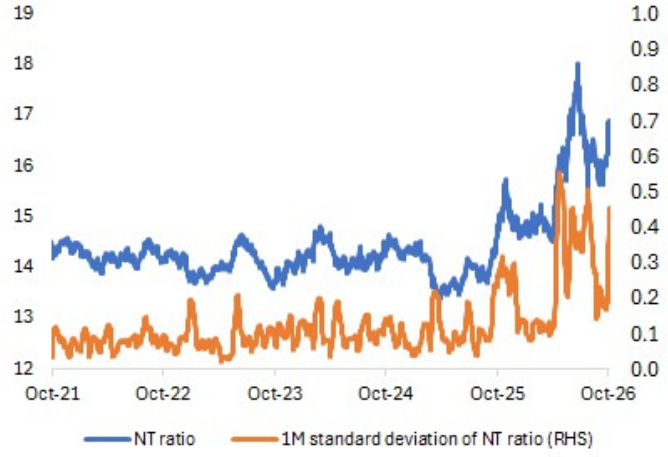

Tony SK Lee [AC]

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Figure 14: Nikkei shows stronger sensitivity to global semi momentum

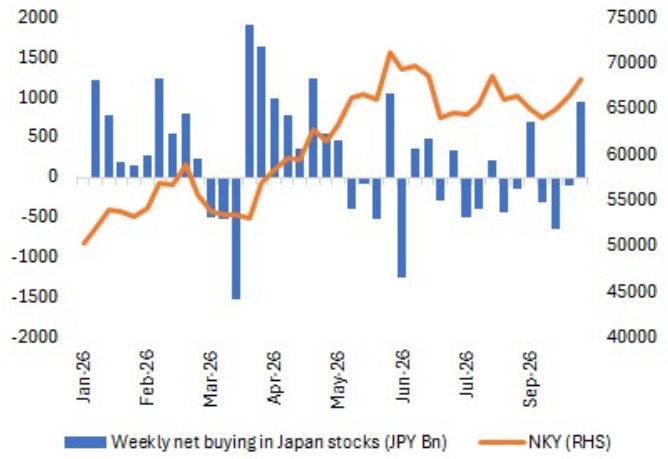

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Flows also leave room for further re-risking. The flow backdrop does not suggest Japan's rally is fully exhausted. Broader foreign flows into Japan have improved only marginally, with just one week of inflows in the latest data, while cumulative flows remain close to June levels. Foreign investors have not yet returned in size, leaving room for incremental buying if earnings deliver and AI/semi momentum stays positive.

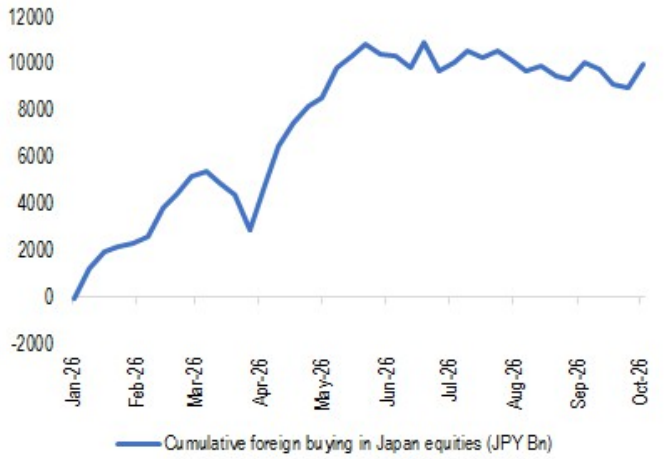

Tony SK Lee [AC]
(852) 2800-8857
tony.sk.lee@jpmorgan.com

Figure 15: Foreign buying has improved, but only marginally

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Figure 16: Cumulative foreign flows remain range-bound despite the rally

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

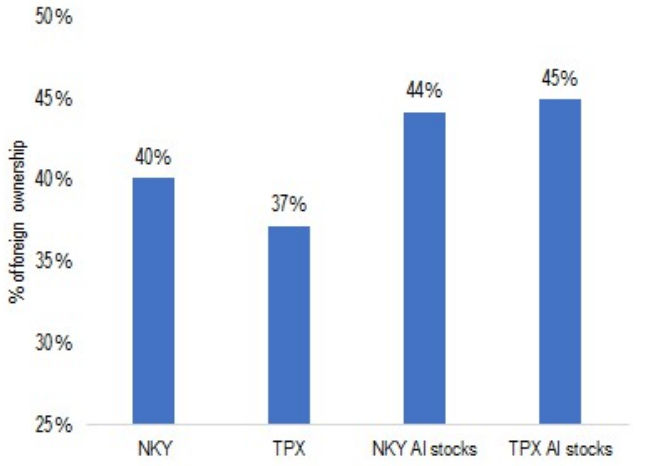

But concentrated AI exposure makes the path more uneven. Participation is increasingly concentrated in the same AI-linked stocks driving the rally. These names carry higher margin balances and higher foreign ownership than the broader market, pointing to more targeted and more leveraged exposure to the theme. This can amplify upside in a positive earnings tape, but it also increases sensitivity to shifts in global tech sentiment.

Figure 17: Leverage remains more concentrated in AI-linked stocks

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Figure 18: AI leaders carry higher foreign ownership than the broader market

Based on exchange-reported foreign ownership data at the stock level. Aggregate foreign ownership is calculated as the index-weighted average of constituent-level foreign ownership
Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Macro risks add another layer. If rates or oil prices move higher again, the Nikkei's AI-heavy composition could leave it more exposed than the broader market. Higher yields would pressure growth valuations, while higher energy prices could weigh on margins and revive inflation concerns. This does not undermine the constructive view, but it does argue against assuming a straight-line rally.

Tony SK Lee [AC]
(852) 2800-8857
tony.sk.lee@jpmorgan.com

Seasonality also points to a more uneven year-end path. Nikkei's usual year-end pattern is constructive, with positive median returns in October, November and December since 2000. In mid-term years, however, strength has been more front-loaded: October and November have been positive, while December has been negative, consistent with similar December softness across SPX, NDX, SX5E and KOSPI2. Against concentrated AI leadership and lingering macro sensitivity, this points to a higher risk of sharper swings as the year-end approaches.

Table 2: Mid-term seasonality points to a more uneven year-end path

Median return by month during 2000-2026

	SPX	NDX	SX5E	NKY	KOSPI2

Own the rally with NKY calls and USDJPY-contingent hybrids

Bottom line, we remain constructive on Japan upside, supported by AI/semi earnings momentum and room for further foreign re-risking. With implied volatility back to more manageable levels, cheap NKY calls offer an attractive way to participate in further upside and a potential breakout. The short-gamma backdrop adds to the appeal of calls, as positive shocks could reinforce spot-up / vol-up dynamics if dealers hedge in the direction of the move.

For investors looking to add Japan upside, we believe that **NKY calls provide the cleanest expression**. For investors already long Japan, shifting part of the exposure into cheap calls can help maintain upside participation while owning more convexity at lower volatility levels.

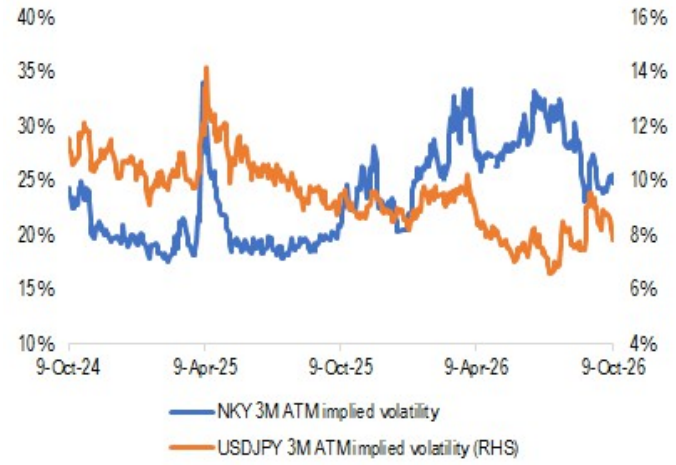

- **Buy Jan27 NKY 110% call** @ 1.65% (24.2v / 24.4% delta)

For investors seeking lower premium outlay, we like **NKY–USDJPY hybrids.** Adding a lower USDJPY contingent condition significantly cheapens the structure, while preserving upside participation if the Nikkei rally occurs alongside a stronger FX backdrop. The structures screen attractively priced given low volatility in both NKY and USDJPY:

- **Buy Jan27 NKY 110% calls contingent on USDJPY < 98%** @0.7% (58% discount vs. vanilla call)
- **Buy Jan27 NKY > 110% and USDJPY < 98% dual digital** @8.8% (64% discount vs. equity single digital)

TSMC Earnings in Focus for Further Upside After Strong Sales

TSMC's September sales print was strong versus guidance and consensus, but the initial price response suggests the market is still waiting for the earnings release on October 15 for clearer forward confirmation. TSMC reported September revenue of NT$512bn, down 0.6% MoM but up 55% YoY, and preliminary 3Q26 sales of NT $1,494bn, up 18% QoQ, which appears to exceed the high end of 3Q26 USD guidance (US$44.6bn–45.8bn) and run ~2–3% above JPMe/consensus (see here). Despite the strong print, the TSMC ADR was down ~1% on October 9 after the sales release, indicating that investors may be looking for more earnings-day detail on margins, guidance, and the durability of the demand outlook.

Figure 21: Since 2020, there have been 27 instances where earnings releases followed shortly after the monthly sales and revenue release and in 19 of 27 cases the earnings-day move exceeded the sales-day move.

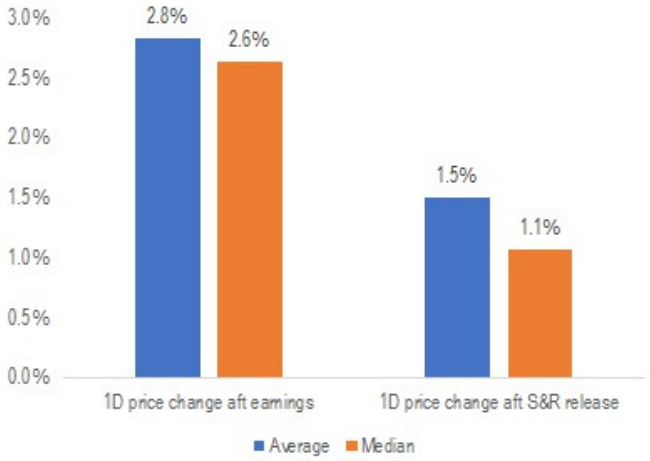

History covers all earnings releases and the preceding monthly sales and revenue prints since 2020.

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Figure 22: The average absolute move after earnings is 2.8% versus 1.5% after the sales and revenue release.

History covers all earnings releases and the preceding monthly sales and revenue prints since 2020.

Source: Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

History suggests the sales print is informative, but it does not consistently "settle" the earnings-day move. Since 2020, there have been 27 instances where TSMC (2330 TT) earnings releases followed shortly after the monthly sales and revenue release. Post-earnings, the stock moved down 13 times and up 14 times, while after the sales and revenue releases it moved down 11 times and up 14 times, with 2 flat outcomes. In 19 of the 27 cases (a 59% chance), the earnings-day move exceeded the preceding sales-day move (Figure 21). The magnitude of the earnings-day move also tends to be larger. The average absolute move after earnings is 2.8% versus 1.5% after the sales and revenue release, and the median absolute move is 2.6% versus 1.1%, respectively (Figure 22). Taken together, we would still treat the earnings release as the key catalyst, even if the sales beat is partially priced in.

Tony SK Lee [AC]
(852) 2800-8857
tony.sk.lee@jpmorgan.com

Figure 23: Performance of TSMC and major global tech indices

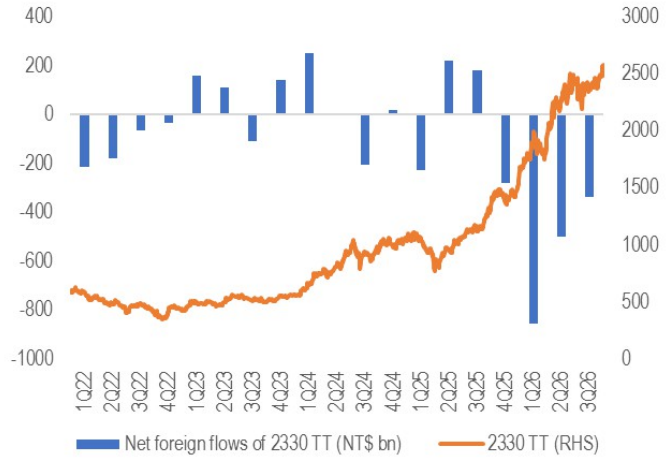

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Figure 24: Earnings revision breadth has accelerated to 100%, indicating expectations are now very elevated and the market is expecting strong delivery.

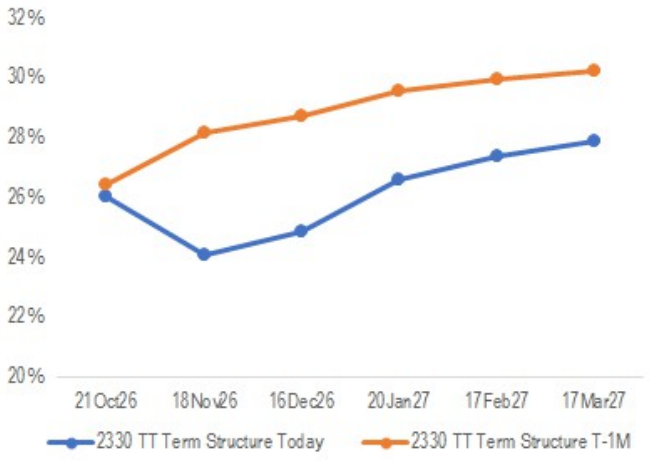

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Figure 25: The consecutive deceleration in foreign outflows suggests incremental selling pressure may be closer to exhaustion and foreign positioning may already be light.

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Figure 26: Term structure of TSMC has become inverted ahead of the earnings release.

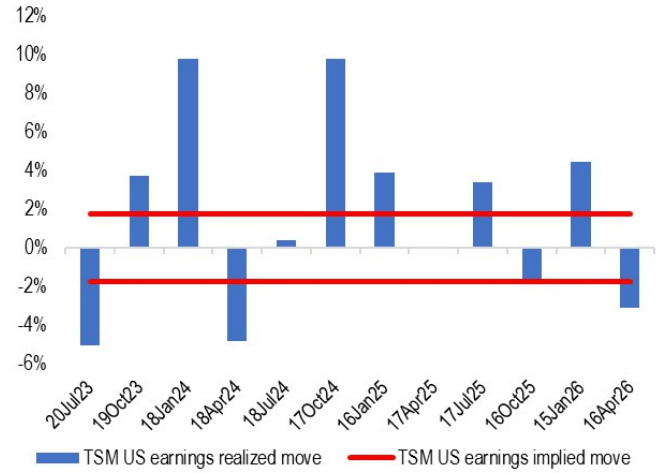

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Positioning and expectations are pulling in different directions, which keeps earnings as the decisive catalyst. Earnings revision breadth has accelerated to 100% (Figure 24), indicating expectations are now very elevated and the market is expecting strong delivery. At the same time, the consecutive deceleration in foreign outflows suggests incremental selling pressure may be closer to exhaustion and foreign positioning may already be light, which can reduce the marginal flow headwind (Figure 25). Taken together, we would frame the setup as "high bar, high sensitivity", where the sales beat alone is not enough, and the earnings release is more likely to determine whether the stock can transition from a cautious tape into a more sustained catch-up move.

Tony SK Lee [AC]
(852) 2800-8857
tony.sk.lee@jpmorgan.com

Figure 27: Options market is implying an earnings day move of 2.2% for TSM US compared to 3.5% of the 3Y historical median.

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Figure 28: Options market is implying an earnings day move of 2.1% for 2330 TT compared to 2.8% of the 3Y historical median.

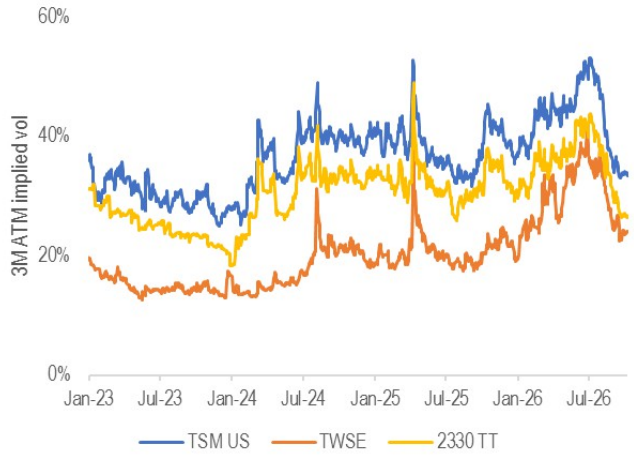

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Earnings volatility screens relatively cheap versus history, with implied moves priced below realized medians across TSMC and the broader Taiwan benchmark. Term structure of TSMC has become inverted ahead of the earnings release (Figure 26). The options market is implying an earnings-day move of 2.2% for TSM US versus a 3Y median realized move of 3.5% (Figure 27). For 2330 TT, the implied move is 2.1% versus a 3Y median realized move of 2.8% (Figure 28). At the index level, TWSE implied move is 1.2% versus a 3Y median realized move of 1.6%, suggesting event risk is not being priced aggressively at the benchmark level either.

Implied volatility levels are also low on a percentile basis, reinforcing the view that event risk may be underpriced into the upcoming catalyst window. 2M ATM implied volatility is 24.5% for 2330 TT and 31.5% for TSM, both around the ~12%-tile over the past three years. One-month realized volatility is 19% for 2330 TT and 29% for TSM (Figure 30), which keeps realized running close to, or above, implied depending on the line, consistent with a market that may still be pricing a relatively narrow near-term distribution into earnings.

Tony SK Lee [AC]
(852) 2800-8857
tony.sk.lee@jpmorgan.com

Figure 29: 2330 TT has lower 2M ATM implied volatility compared to TSM US.

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Figure 30: The skew of TSMC (2330 TT) is relatively low, favoring selling calls.

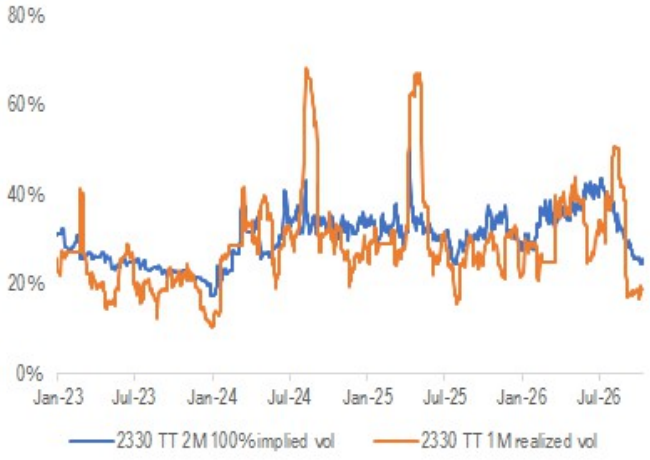

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

The volatility backdrop leans toward long-volatility structures, while skew dynamics suggest it can be more efficient to sell calls on the upside. In this setup, we think a call spread on 2330 TT is a sensible way to implementing the view while better managing carry versus an outright call.

- **Buy 2330 TT 16Dec26 105%-115% call spread:** 2.4% offer (delta 26%, implied vol 27%/26.5%)

Figure 31: 2M ATM volatility history of 2330 TT

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Figure 32: Price history of 2330 TT and proposed call strikes

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Investors can also consider implementing the upside view via TWSE, which provides a broader vehicle while still retaining meaningful TSMC exposure. TSMC accounts for more than 40% of the TWSE weight, so index upside participation can still be materially driven by a constructive TSMC outcome.

In addition, we have previously highlighted TWSE as a potential beneficiary of the Apple supply chain (see here), which can provide an additional fundamental

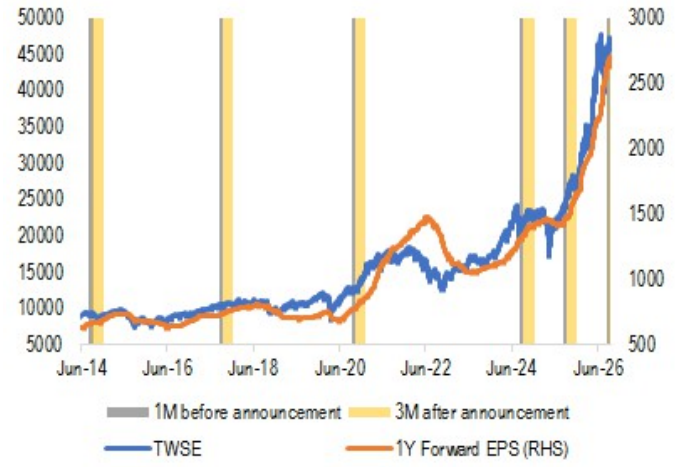

Tony SK Lee [AC]
(852) 2800-8857
tony.sk.lee@jpmorgan.com

channel for index-level upside beyond the single-name catalyst. Our analysis shows that from product announcement to three months later, Taiwan supply-chain forward EPS rose by around 5% on average across 2014–2025, and by around 9% in major product-upgrade years. If 2026 follows prior major Apple cycles, earnings upgrades could become the incremental catalyst for Taiwan upside (Figure 33).

- **Buy TWSE 16Dec26 110% call:** 1.37% offer (delta 22.9%, implied vol 24.3%)
- **Buy 17Mar27 TWSE > 112.5% and USDTWD > 100.75%:** 9.85% offer qUSD (implied correlation -22.5% , 64% cost savings vs. single digital on equity leg)
- **Buy 17Mar27 TWSE > 110% call contingent on USDTWD > 100.5%:** 1.29% offer qUSD (-22.5% correlation offer, 65% cost savings vs. vanilla call)

Figure 33: Apple launch windows have coincided with TWSE EPS and market upside

(852) 2800-8857
tony.sk.lee@jpmorgan.com

Own the TSMC Capex Theme via Baskets

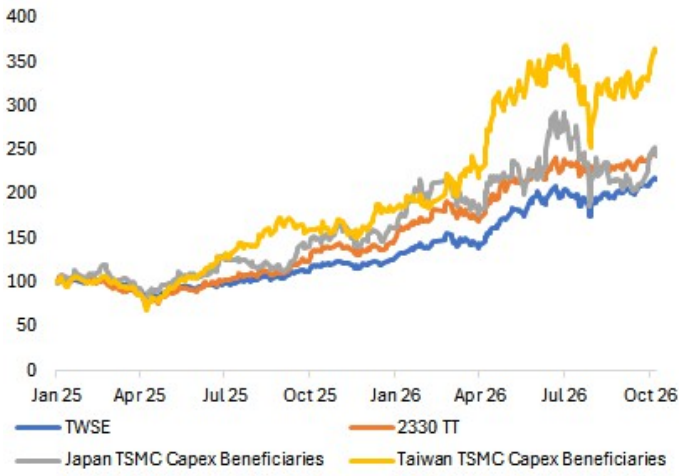

TSMC's capex plan is a clear medium-term theme. Our analyst Gokul Hariharan expects TSMC capex of US$64bn / US$86bn / US$100bn in 2026 / 2027 / 2028 (see here), reflecting stronger N3 and N2 ramps and a likely A14 pull-forward, with potential upside to 2028 if the pull-in materializes further. With that backdrop, **the 3Q26 earnings call** is the next key catalyst to look for incremental evidence of 2026 capex upside and management's latest directional framing for 2027–28 spend. While TSMC is unlikely to give a formal three-year capex target, management does use earnings calls **to raise or qualify near-term capex** and **to provide directional commentary on multi-year spending**.

Figure 35: TSMC's suppliers' sales trends tend to track the capex cycle closely

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Figure 36: TSMC's capex beneficiaries, particularly in Japan and Korea, offer a cleaner way to express the capex hike theme

Source: **Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy**

To express the theme more directly, we focus on the **capex beneficiaries**, particularly in Japan and Korea. These suppliers effectively receive the same budget as orders, carry none of the free cash flow drag, and their sales trends tend to track the capex cycle more closely than the foundry's share price does.

TSMC's Liquid Suppliers: Where Capex Lands

TSMC's liquid Asia-listed suppliers fall into six types by what they sell to the company: **fab infrastructure**, **front-end equipment**, **packaging back-end tools**, **test**, **wafers**, and **materials and consumables**. The two markets look different. **Japan's 33 suppliers** are dominated by materials and consumables (15) and front-end equipment (9), with only 3 in fab infrastructure, 2 in packaging tools, 3 in wafers and 1 in test. **Taiwan's 40 suppliers** lean towards materials and consumables (10), fab infrastructure (7) and packaging tools (6), with wafers (4) and test (2) smaller and no front-end equipment makers.

Three of the six groups are paid directly when TSMC expands. Fab infrastructure companies build and equip the factories, for example, cleanrooms and water and gas

Tony SK Lee [AC]
(852) 2800-8857
tony.sk.lee@jpmorgan.com

systems, and are paid early, before any machines arrive. **Front-end equipment makers** sell the machines that make the chips, and **packaging tool makers** sell the equipment that assembles advanced AI chips. When TSMC spends more, the order books of all three grow, and together they cover the build from factory construction to chip assembly. Our analyst sees nine new factory phases for TSMC's latest chip technology over the next three years, and advanced packaging capacity more than doubling by the end of 2028.

Figure 37: TSMC's 33 liquid, Japan-based suppliers are concentrated in materials and consumables (15) and front-end equipment (9)

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

Figure 38: TSMC's 40 liquid, Taiwan-based suppliers skew toward materials and consumables (10), fab infrastructure (7), and packaging tools (6)

Source: Bloomberg Finance L.P., J.P. Morgan Equity Derivatives Strategy

The other three groups depend on how many chips TSMC makes, not on how much it builds. Wafer and materials suppliers sell inputs that are used up in proportion to production, so their sales track how busy TSMC's factories are today, and extra capacity helps them only once it is running. Test equipment makers follow chip volumes and the AI chip cycle rather than TSMC's building plans. They benefit from TSMC's growth but not directly from the capex decision we are positioning for, so we leave them out.

TSMC Capex Beneficiaries

We start from TSMC's liquid Asia-listed suppliers, ranked by revenue linked to TSMC using supply-chain relationship data, and keep the three capex-driven groups, which contain 12 Japan names and 13 Taiwan names.

The baskets give different exposure. **The Japan basket** is mostly front-end equipment makers, with some fab infrastructure and packaging tool names, so it responds to tool orders for new N3, N2 and A14 capacity. **The Taiwan basket** is made up of fab infrastructure and packaging tool suppliers, so it responds early in the cycle to new fab phases and to CoWoS and SoIC additions. Both are driven by the direction of TSMC's plan rather than by current output, so **capacity commentary on October 15** can move expectations without a formal capex number.

Buy the Baskets via Long Swaps or Call Spread Collars

The Taiwan and Japan capex baskets have **lagged TSMC in the second half so far**, and the July tech rout cleared positioning in both, so they enter the print with **room to catch up** if TSMC's capacity commentary is firm.

For a delta-one expression of the theme, we recommend buying the baskets via **long total return swaps**. Please check with your J.P. Morgan sales representative for indicative swap pricing and terms.

- **Buy TSMC Japan Capex Beneficiaries (JPJPTSSC Index) via long total return swaps**
- **Buy TSMC Taiwan Capex Beneficiaries (JPTWTSSC Index) via long total return swaps**

Both baskets are high-volatility, with implied volatility in the **mid-30s for the Taiwan basket** and the **low-40s for the Japan basket**. At those levels outright calls are expensive, but the short legs of a call spread collar are well paid: selling the upper call and the put monetizes the same elevated implied volatility that raises the cost of the long

Tony SK Lee [AC]
(852) 2800-8857
tony.sk.lee@jpmorgan.com

call, which brings the net premium down and, in our view, makes the structure attractively priced for this view.

A March 2027 expiry covers three events: **the October 15 print**, **TSMC's fourth-quarter results in January 2027** when our analyst expects a quantitative 2027 capex number may arrive, and the weeks after. It expires before **TSMC's first-quarter results**, usually in mid-April.

- **TSMC Japan Capex Beneficiaries (JPJPTSSC Index) 12Mar27 90%/105%/127% call spread collar**: offered at zero cost (45v/42v/42v)
- **TSMC Taiwan Capex Beneficiaries (JPTWTSSC Index) 17Mar27 90.5%/110%/125% call spread collar**: offered at zero cost (35v/36v/35v)

J.P.Morgan

HSCEI: Long Gamma Persists, Vol Keeps Slipping Toward Lows

Dealer long gamma persists in HSCEI options and remains increasingly significant. At an HSCEI spot level of around 8,150, we estimate dealers are long roughly US$954mn of gamma, equivalent to around 13% of three-month average futures turnover. The long-gamma position appears largely driven by investor call selling, which continues to add vol supply to the market.

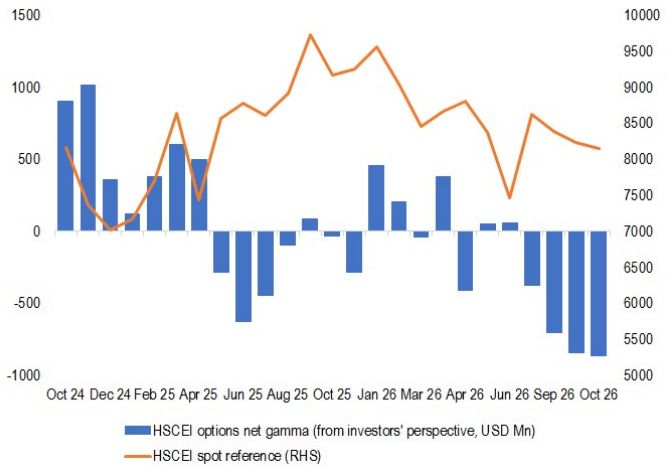

This has likely contributed to HSCEI's muted tape: rallies have lacked follow-through, dips have been absorbed, and realized volatility has stayed compressed. Dealer hedging in a long-gamma regime can further dampen moves by leaning against spot direction, reinforcing range-bound trading. As realized vol remains subdued, HSCEI 1M ATM implied vol has continued to slide and remains near historical lows.

Figure 41: Investors' gamma positioning in Hong Kong equities

A positive number indicates investors (dealers) are long (short) gamma. Data as of 09 Oct 2026.

Risks of Common Option Strategies

Risks to Strategies: Not all option strategies are suitable for investors; certain strategies may expose investors to significant potential losses. We have summarized the risks of selected derivative strategies. For additional risk information, please call your sales representative for a copy of "Characteristics and Risks of Standardized Options." We advise investors to consult their tax advisors and legal counsel about the tax implications of these strategies. Please also refer to option risk disclosure documents.

Put Sale: Investors who sell put options will own the underlying asset if the asset's price falls below the strike price of the put option. Investors, therefore, will be exposed to any decline in the underlying asset's price below the strike potentially to zero, and they will not participate in any price appreciation in the underlying asset if the option expires unexercised.

Call Sale: Investors who sell uncovered call options have exposure on the upside that is theoretically unlimited.

Call Overwrite or Buywrite: Investors who sell call options against a long position in the underlying asset give up any appreciation in the underlying asset's price above the strike price of the call option, and they remain exposed to the downside of the underlying asset in the return for the receipt of the option premium.

Booster : In a sell-off, the maximum realized downside potential of a double-up booster is the net premium paid. In a rally, option losses are potentially unlimited as the investor is net short a call. When overlaid onto a long position in the underlying asset, upside losses are capped (as for a covered call), but downside losses are not.

Collar: Locks in the amount that can be realized at maturity to a range defined by the put and call strike. If the collar is not costless, investors risk losing 100% of the premium paid. Since investors are selling a call option, they give up any price appreciation in the underlying asset above the strike price of the call option.

Call Purchase: Options are a decaying asset, and investors risk losing 100% of the premium paid if the underlying asset's price is below the strike price of the call option.

Put Purchase: Options are a decaying asset, and investors risk losing 100% of the premium paid if the underlying asset's price is above the strike price of the put option.

Straddle or Strangle: The seller of a straddle or strangle is exposed to increases in the underlying asset's price above the call strike and declines in the underlying asset's price below the put strike. Since exposure on the upside is theoretically unlimited, investors who also own the underlying asset would have limited losses should the underlying asset rally. Covered writers are exposed to declines in the underlying asset position as well as any additional exposure should the underlying asset decline below the strike price of the put option. Having sold a covered call option, the investor gives up all appreciation in the underlying asset above the strike price of the call option.

Put Spread: The buyer of a put spread risks losing 100% of the premium paid. The buyer of higher-ratio put spread has unlimited downside below the lower strike (down to zero), dependent on the number of lower-struck puts sold. The maximum gain is limited to the spread between the two put strikes, when the underlying is at the lower strike. Investors who own the underlying asset will have downside protection between the higher-strike put and the lower-strike put. However, should the underlying asset's price fall below the strike price of the lower-strike put, investors regain exposure to the underlying asset, and this exposure is multiplied by the number of puts sold.

Call Spread: The buyer risks losing 100% of the premium paid. The gain is limited to the spread between the two strike prices. The seller of a call spread risks losing an amount equal to the spread between the two call strikes less the net premium received. By selling a covered call spread, the investor remains exposed to the downside of the underlying asset and gives up the spread between the two call strikes should the underlying asset rally.

Butterfly Spread: A butterfly spread consists of two spreads established simultaneously – one a bull spread and the other a bear spread. The resulting position is neutral, that is, the investor will profit if the underlying is stable. Butterfly spreads are established at a net debit. The maximum profit will occur at the middle strike price; the maximum loss is the net debit.

Pricing Is Illustrative Only: Prices quoted in the above trade ideas are our estimate of current market levels, and are not indicative trading levels.

Analyst Certification: The Research Analyst(s) denoted by an "AC" on the cover of this report certifies (or, where multiple Research Analysts are primarily responsible for this report, the Research Analyst denoted by an "AC" on the cover or within the document individually certifies, with respect to each security or issuer that the Research Analyst covers in this research) that: (1) all of the views expressed in this report accurately reflect the Research Analyst's personal views about any and all of the subject securities or issuers; and (2) no part of any of the Research Analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the Research Analyst(s) in this report. Important Disclosures

- **Market Maker/ Liquidity Provider:** J.P. Morgan is a market maker and/or liquidity provider in the financial instruments of/related to DAIFUKU (6383), Disco (6146), Ebara Corp (6361), Kajima (1812), Kokusai Electric Corp (6525), Lasertec (6920), Organo Corp (6368), Rorze Corp (6323), SCREEN Holdings (7735), Shibaura Mechatronics Corp (6590), Tokyo Electron (8035), ULVAC (6728) or related entities.
- **Manager or Co-manager:** J.P. Morgan acted as manager or co-manager in a public offering of securities or financial instruments (as such term is defined in Directive 2014/65/EU) of/for Kokusai Electric Corp (6525) or related entities within the past 12 months.
- **Beneficial Ownership (1% or more):** J.P. Morgan beneficially owns 1% or more of a class of common equity securities of Disco (6146), Kajima (1812), Lasertec (6920) or related entities.
- **Client:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients: DAIFUKU (6383), Disco (6146), Ebara Corp (6361), Kajima (1812), Kokusai Electric Corp (6525), Lasertec (6920), Organo Corp (6368), SCREEN Holdings (7735), Shibaura Mechatronics Corp (6590), Tokyo Electron (8035), ULVAC (6728) or related entities.
- **Client/Investment Banking:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as investment banking clients: Kokusai Electric Corp (6525) or related entities.
- **Client/Non-Investment Banking, Securities-Related:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients, and the services provided were non-investment-banking, securities-related: DAIFUKU (6383), Disco (6146), Ebara Corp (6361), Kajima (1812), Kokusai Electric Corp (6525), Lasertec (6920), Organo Corp (6368), SCREEN Holdings (7735), Shibaura Mechatronics Corp (6590), Tokyo Electron (8035), ULVAC (6728) or related entities.
- **Client/Non-Securities-Related:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients, and the services provided were non-securities-related: DAIFUKU (6383), Lasertec (6920), Tokyo Electron (8035) or related entities.
- **Investment Banking Compensation Received:** J.P. Morgan has received in the past 12 months compensation for investment banking services from Kokusai Electric Corp (6525) or related entities.
- **Potential Investment Banking Compensation:** J.P. Morgan expects to receive, or intends to seek, compensation for investment banking services in the next three months from DAIFUKU (6383), Ebara Corp (6361), Kokusai Electric Corp (6525), Lasertec (6920), Organo Corp (6368), SCREEN Holdings (7735), Tokyo Electron (8035), ULVAC (6728) or related entities.
- **Non-Investment Banking Compensation Received:** J.P. Morgan has received compensation in the past 12 months for products or services other than investment banking from DAIFUKU (6383), Disco (6146), Ebara Corp (6361), Kajima (1812), Kokusai Electric Corp (6525), Lasertec (6920), Organo Corp (6368), SCREEN Holdings (7735), Shibaura Mechatronics Corp (6590), Tokyo Electron (8035), ULVAC (6728) or related entities.
- **Debt Position:** J.P. Morgan may hold a position in the debt securities of DAIFUKU (6383), Disco (6146), Ebara Corp (6361), Kajima (1812), Kokusai Electric Corp (6525), Lasertec (6920), Organo Corp (6368), Rorze Corp (6323), SCREEN Holdings (7735), Shibaura Mechatronics Corp (6590), Tokyo Electron (8035), ULVAC (6728) or related entities, if any.

Company-Specific Disclosures: J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Important disclosures, including price charts and credit opinion history tables (if applicable), are available for compendium reports and all J.P. Morgan–covered companies, and certain non-covered companies, by visiting https://www.jpmm.com/research/disclosures, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, https://www.jpmorganmarkets.com.

J.P. Morgan Equity Research Ratings Distribution, as of October 03, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	35%	12%
IB clients**	83%	81%	72%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	93%	88%

***Please note that the percentages may not add to 100% because of rounding.**
****Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.**
For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the

ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit https://www.theocc.com/components/docs/riskstoc.pdf for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.
