ASIA TECHNOLOGY TRACKER 14 OCTOBER 2026

Asia Pacific Reports/Notes

Accton (Overweight), Taiwan
Margin fears overdone; 2027 re-acceleration on liquid-cooled T3 and 1.6T *(Albert Hung)*
We recently met with Accton's management, and the overall message was constructive on medium- to long-term demand trends. Near term, we trim our 2026 EPS estimate by 5% to reflect the AWS T3 transition in 4Q26 and margin headwinds from rising memory costs. Looking ahead, we raise our 2027/2028 EPS forecasts by 1%/3% to reflect the dual upside drivers from liquid-cooled AWS T3 modules and 1.6T switches. Accton stock has underperformed the TWSE by ~22% over the past three months on margin dilution concerns and AWS supply-chain noise. We believe these fears are overdone and expect market sentiment to turn more constructive as consignment adoption becomes better understood. With a 54% EPS CAGR over 2026–28E, we recommend investors accumulate on the recent weakness. Stay OW with a Jun-27 PT of NT$3,700, based on 25x 12M fwd EPS.

Korea Electrical Equipment, South Korea, United States
3Q26 preview: Earnings likely to miss on FX and delays in order delivery *(Stephen Tsui, CFA)*
We expect divergent trends for Korean electrical equipment companies' 3Q results. Hyundai Electric/ Hyosung Heavy may miss consensus operating profit by ~10% on average as a function of FX headwinds (for HD Electric) and delays in order delivery in some regions, like the Middle East. Core trends in the US market were likely in line (on margin, new orders, etc.). We expect lead time/pricing trends for HV equipment to remain similar qoq. For LS Electric, we expect a ~5% beat in operating profit on the back of sustained delivery for the US. AIDC orders and the company's new orders during the quarter were likely in line, making its FY26 guidance achievable, at W6tn-6.5tn. All in all, the sector has pulled back by a sharp ~20% on average over the past month (KOSPI -13%), and we believe the negatives on 3Q trends are likely priced in and that the headwinds are unlikely to be structural. The recent decline is reminiscent of the sharp pullback in late July, creating an attractive entry point for long-term investors with patience, particularly for names with exposure to HV equipment with a structural upcycle and high barriers to entry, like Hyundai Electric and Hyosung Heavy. Estimate and PT changes on page 4.

Japan Reports/Notes

Mitsubishi Electric (6503) (Overweight), Japan
Key takeaways from group meeting on energy domain *(Junya Ayada)*
On the 8th, we held a group meeting on the energy domain, featuring Mr. Fujita, Senior General Manager of Mitsubishi Electric's Digital Energy Systems Center of Excellence. He spoke comprehensively about the strategic background to the acquisition of PCI Energy Solutions (PCI) announced in August, changes in the US electricity trading market, and the room for growth in the energy solutions business that the company is targeting over the longer term. Given the company's business model, we believe cross-segment solution sales are likely to grow over the medium term, driven by DC800V solutions and these energy solutions. In the area of energy solutions, the company intends to focus on the expansion of services not only to the power supply side but also to demand sources, such as data centers, as well as the expansion of synergies with existing businesses and power, air conditioning, and cooling systems, such as DC800V.

Sony Group (6758) (Overweight), Japan
Key takeaways from meeting with SPE management *(Junya Ayada)*
We attended a sell-side analyst meeting with Ravi Ahuja, Chairman & CEO of Sony Pictures Entertainment (SPE), on October 13. Mr. Ahuja made many positive comments about the future outlook of the next few years, leaving a positive overall impression. SPE's earnings rely heavily on franchise titles, but we also highlight medium-term growth potential from expanding its business scope, including recurring revenue network business (e.g., Crunchyroll), creation of synergies from collaboration within the Sony Group (e.g., music), and use of technology to create immersive experiences. Mr. Ahuja's main comments are as follows.

US Reports/Notes

Enovix (Underweight), United States
Model Update: 3Q Preliminary Results *(Bill Peterson)*
We are updating our model following the 3Q preliminary results to reflect: 1) lower smart eyewear battery shipments in 3Q (vs prior ~19K guide), given the company's disclosure of ~17K production samples shipped YTD 2) stronger-than-expected defense/industrial revenue, as implied by the topline beat ($11.0M vs $9-10M guide) 3) minor updates to costs and cash-flow items to align with disclosed 3Q line items. Beyond 3Q, we now expect higher 4Q capex given what appears to be a timing-driven 3Q underspend ($3M vs $8-12M guide), do not expect any pullback in medium term scale of capex given the stated $19M Korea investment to double capacity. Strategically, the company's leadership realignment and language around "immediate revenue growth opportunities" in defense suggests incremental prioritization of drones/defense conversion vs. phones/glasses near-term, supported by (i) continued pipeline growth (drone/defense/industrial pipeline ~$216M; drone pipeline ~$150M) and (ii) commentary that QTD bookings are strong (though shipments more likely in 2027). We remain U/W with no PT. Enovix is expected to hold its 3Q26 results after market close on November 12th.

Downstream Aluminum, United States
3Q Preview: Expect Beats on Metals Pricing; Scrap Spread Risk Clouding Organic Growth Outlook *(Bill Peterson)*
Our downstream aluminum coverage has underperformed (-17% vs. XME -11%) since mid-Aug when reports emerged of a potential US-Canada trade deal (link). Although no deal was reached, concerns have lingered that Section 232 (S232) tariffs are back on the negotiating table, weighing on the sector's protectionist premia — t-3M 1yr-FWD multiples de-rated 8% vs. FY27 consensus upgrades averaging +2% (Figure NaN). Our coverage has since recovered off late-Sep lows (+5% vs. XME +1%), but UBC scrap

spreads have conversely come under pressure (-6%) and could cap share performance as investors look to gauge next year's earnings against post-peak scrap spreads. Both companies have organic growth drivers, but potential shifts in strategy with KALU's CEO change and CSTM's leverage to UBC scrap spreads have made bridging that gap less clear for investors. Into the prints, we keep our estimates unchanged, but anticipate upside to 3Q consensus for KALU on metal lag benefits and to a lesser extent for CSTM on scrap spreads, and expect relatively muted 4Q outlooks on seasonality and loosening primary metal fundamentals.

Europe Reports/Notes

Hana Microelectronics (Overweight), Thailand
3Q26 results preview: Core business strengthens; second TEC order adds upside *(Samuel Tan)*
We raise our Dec-27 PT to Bt61 (from Bt53) and lift our FY27/28E EPS by 6%/14% on an unchanged 27x P/E as we now factor in the second TEC (thermoelectric cooling) purchase order from the customer, following our meeting with management. The key incremental positives: (1) the ramp-up timeline for the pluggable TEC project is largely on track, with only slight equipment-delivery delays that are manageable and should not change the ramp schedule; (2) the second Phononic contract's equipment has begun arriving in 4Q26, and both contracts should reach full capacity by end-1Q27; and (3) the existing non-AI business continues to see sequentially improving utilisation on the back of China+1 diversification. Stay OW. *HANA is scheduled to release its 3Q26 results after market close on 11 November, followed by a post-results management call on 17 November.*

Delta Electronics (Overweight), Thailand
Parentco 3Q implies in-line Thailand quarter; back-loaded 2H, with 4Q doing the heavy lifting; stay OW *(Samuel Tan)*
Parent company Delta Electronics, Inc. (covered by Albert Hung) reported September revenue of NT$65bn (+1% MoM, +15% YoY), taking 3Q26 revenue to NT197bn (+8% Q/Q, +31% Y/Y). While this trailed recently lowered market expectations, the shortfall reflects timing, as power semiconductor and PSU capacitor supply paced Power Electronics shipments, and is not a softening in demand. The read-through for Delta Thailand is neutral, in our view. Thailand contributed ~38%/35% of parentco revenue in 1Q26/2Q26, and applying a conservative ~35% ratio to 3Q26 parentco revenue implies Thailand revenue of ~Bt69bn (+8% Q/Q), in line with our 3Q26E of Bt68.5bn. The midpoint of the ~36.5% ratio implies ~Bt72bn, 5% above our estimate. We see our 2H26 revenue and earnings forecasts as on track, with a step-up improvement into 4Q26 that does the heavy lifting. Stay OW with a Jun-27 PT of Bt360. Delta Thailand is scheduled to release 3Q26 results after the market close on 27 October. We are hosting the IR team for an update on 29 October at 3:00pm ICT / 4:00pm HKT (sign up here).
