Technip Energies (TE.PA)

Upgrade to Buy on renewed backlog momentum

TE.PA	12m Price Target: **€35.00**	Price: **€29.48**	Upside: **18.7%**

We upgrade **Technip Energies** to **Buy from Neutral** as we see increasing visibility on several large gas award opportunities driven by the acceleration of gas supply diversification away from the Strait of Hormuz. Recent disruptions to Middle East LNG supply chains have increased the strategic importance of a number of projects that were previously viewed as secondary, longer-dated, or outside the industry's core FID pipeline.

We believe projects including **Commonwealth LNG Expansion, Abadi LNG, Bab Gas Cap, Fujairah LNG and Coral FLNG 3** have gained momentum as buyers in Europe and Asia increasingly prioritize supply security, route diversification, and reduced dependence on Middle Eastern supply. In our view, this effectively expands the addressable LNG opportunity set for contractors such as Technip Energies beyond the projects previously included in our outlook.

A successful outcome on these projects could add up to **c.€10.5bn of incremental backlog,** on our estimates. Given the expected FID timing of these projects in 2027-28, we would expect backlog conversion to begin supporting revenue growth from 2027 onwards, providing an additional layer of earnings visibility beyond the company's existing order book. Reflecting the stronger project outlook, we raise our revenue estimates by 3%/12%/36% for 2027E/2028E/2029E, respectively, driving corresponding EPS upgrades of 3%/12%/34%. While disruptions around the Strait of Hormuz may create some near-term earnings risk from the extra costs associated with logistical challenges within Hormuz, we believe these impacts are broadly reflected in ThompsonReuters consensus estimates and are outweighed by improving visibility on future LNG awards.

Meanwhile, Technip Energies has materially underperformed both its oil-services peer group and the broader French equity market

Source: Company data, Goldman Sachs Research estimates.

since the end of March. The shares are **down 22.9%** since 30 March and have experienced a **31.8% maximum drawdown** from their April high. Following this correction, the stock trades at c.**20% discount to peers on forward P/E**, at **10.5x NTM P/E versus c.13x** for the peer group. We believe the market is g the improving visibility on future LNG awards, and view the recent share price correction as an attractive entry point into one of the best-positioned LNG contractors globally.

Valuation and 12-month price target: We apply a 6.5x target EV/EBITDA to 2027E EBITDA and 10% target FCF yield (unlevered) to 2027E FCF, and apply a 50/50 weighting to each method. We arrive at a €35 12m price target (from €32 previously), which suggests c.20% upside.

Upgrade to Buy from Neutral

We upgrade Technip Energies to Buy from Neutral as we see increasing visibility on several large LNG award opportunities driven by the acceleration of LNG supply diversification away from the Strait of Hormuz, which could add up to c.€10bn of incremental order intake, on our estimates; combined with the stock's c.30% decline from its April peak, we view the recent as an attractive entry point.

The recent disruption to LNG supply chains in the Middle East has highlighted the concentration risk embedded within global gas markets. With concerns around the reliability of exports transiting the Strait of Hormuz, buyers in both Europe and Asia have increasingly prioritized supply diversification and security of delivery. As a result, a number of LNG projects that were previously viewed as secondary, longer-dated, or outside the industry's core FID pipeline have gained strategic importance and seen accelerated development activity. We believe projects including **Commonwealth LNG Expansion (7.75 Mtpa), Abadi LNG (9.5 Mtpa), Coral FLNG 3 (3.4 Mtpa) and Fujairah LNG (4 Mtpa)** represent examples of incremental opportunities that have moved higher on the industry's priority list. While these projects were not initially among the key LNG developments underpinning expectations for the next wave of awards, heightened focus on energy security, route diversification, and reduced dependence on Middle Eastern supply has increased the likelihood of progression towards engineering, procurement and construction contracts. In our view, this effectively expands the addressable LNG opportunity set for contractors such as Technip Energies beyond the projects previously included in the industry's sanctioning outlook.

As of the end of **1H26, Technip Energies had more than €25bn of Project Delivery (PD) backlog**, providing strong visibility on activity levels over the coming years. Beyond the projects already included in backlog, we see scope for further upside from the emerging LNG opportunity set discussed above. On our estimates, a successful outcome on projects such as Abadi LNG, Fujairah LNG, Commonwealth LNG Expansion, Coral FLNG 3 and the Bab Gas Cap project could add up to **c.€10.5bn of incremental backlog** to Technip Energies. Given the expected FID timing of these projects in 2027-28, we would expect backlog conversion to begin supporting revenue growth from **2027 onwards**, providing an additional layer of earnings visibility beyond the company's existing order book.

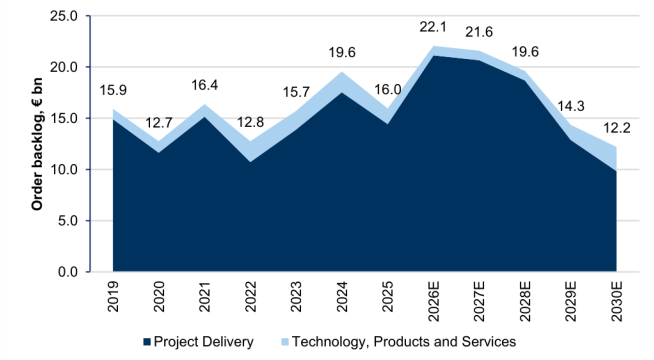

Exhibit 1: Technip Energies: Emerging LNG Opportunity Set

Project	Location	Recent progress / opportunity	Capacity (mtpa)	Potential FID year	Strategic importance	EPC competition
Commonwealth LNG expansion	Louisiana, US	Phase 2 expansion creates an incremental opportunity, reflecting growing demand for non-Middle East LNG supply.	17.25	2028	Additional Atlantic Basin LNG supply for Europe and Asia, reducing reliance on Middle East volumes.	Technip Energies; Bechtel; McDermott; Kiewit; other US LNG contractors
Abadi LNG	Masela Block, Indonesia	Project momentum has accelerated after years of delays, with the development re-emerging as one of Asia's largest LNG opportunities.	9.50	2027	Supports Indo-Pacific supply diversification away from traditional Middle East exports.	Onshore LNG: Technip Energies + JGC vs KBR + Samsung E&A + Adhi Karya FPSO: Technip Energies + JGC vs Saipem + Tripatra + McDermott
Coral FLNG 3	Rovuma Basin, Mozambique	Formal tendering launched for the next FLNG development following Coral South and Coral North.	6.00	2028	Further develops East Africa as an alternative LNG supply hub outside the Middle East.	Technip Energies; Samsung Heavy Industries; JGC; Saipem; other FLNG specialists
Fujairah LNG	Gulf of Oman, UAE	ADNOC revived the project as a strategic greenfield LNG export facility located outside the Strait of Hormuz.	4.00	2027	A direct response to Hormuz transit risk, providing export access that bypasses the chokepoint.	Technip Energies + JGC vs Saipem + Larsen & Toubro vs Tecnimont (MAIRE)
Total opportunity set			**36.75**		**Incremental LNG opportunities supported by supply-security and route-diversification priorities.**	**Technip Energies positioned in multiple active competitions**

Technip Energies has materially underperformed both its oil-services peer group and the broader French equity market since the end of March. The shares are down **22.9%** since 30 March, versus a broadly flat performance for the SBF 120 (-0.3%), implying c.**23pp of** over the period. The stock has also experienced a **31.8% maximum drawdown**, falling from an April high of €41.1/share to a recent low of €28.0/share.

The share-price weakness has been accompanied by a valuation reset. Technip Energies' **12-month forward P/E has compressed from a peak of 14.7x earlier this year to 10.5x currently**, representing a c.33% de-rating from peak levels. Following this correction, the stock now trades at an approximate **20% discount to the oil-services peer group on forward P/E**, with Technip Energies currently valued at **10.5x NTM P/E versus a peer average of c.13x**, suggesting investors continue to price in elevated uncertainty despite the company's strong backlog, cash generation, and LNG market positioning.

Improved visibility on new LNG contract awards from 2027

Technip Energies has >€25bn of backlog, and we see potential awards that could contribute up to €10bn of order intake over the next two years

Technip Energies delivers major projects globally, with a significant presence across the Middle East and Africa, from Qatar and Abu Dhabi to Rovuma and Coral in Mozambique. It competes with Japanese players JGC and Chiyoda in the Middle East, Africa, and Asia. In the US, the company faces competition from US-based EPC provider Bechtel, which is involved in major projects such as Sabine Pass, Corpus Christi, and Port Arthur. Nevertheless, T.EN has secured involvement in projects such as Commonwealth. Technip Energies also works alongside competitors including JGC and KBR on key projects such as Abadi.

Most prominently, Technip Energies is currently involved in the following projects:

- **Coral Norte FLNG** – Technip Energies was awarded a large contract to perform

preliminary activities for a Floating Liquefied Natural Gas (FLNG) unit in Africa. Technip Energies is recognized as a global leader in FLNG, having delivered three open-sea units worldwide with a total capacity of 8.2 Mtpa. These include PFLNG SATU in Malaysia, Prelude FLNG in Australia, and Coral Sul FLNG in Mozambique. Coral Norte FLNG is a replica of Coral Sul FLNG and was initially excluded from Technip's backlog pending completion of administrative requirements for the full notice to proceed. It was subsequently included in the backlog in February 2026.

- **Commonwealth** - Technip Energies was awarded a major Engineering, Procurement and Construction (EPC) contract by Commonwealth LNG for its 9.5 Mtpa (million tonnes per annum) liquefied natural gas (LNG) facility in Cameron Parish, Louisiana, USA. The contract involves the delivery of six identical liquefaction trains utilizing Technip Energies' SnapLNG by T.EN modular and scalable solution. The modular approach aims to accelerate the schedule and optimize costs while providing predictability and certainty at scale. This award followed the successful completion of the front-end engineering and design (FEED) phase by Technip Energies. The project subsequently reached Final Investment Decision (FID) by Commonwealth LNG, following which it was recognized in the backlog.
- **North Field West, Qatar** - Technip Energies was awarded a significant Detailed Engineering Design contract by Larsen & Toubro Limited (L&T) Hydrocarbon Business for the North Field Production Sustainability Offshore Compression Project (NFPS COMP 4) of QatarEnergy LNG. Announced on 28 April 2025, the award followed Technip Energies' completion of the Front-End Engineering and Design (FEED) phase for the project. The contract entails providing detailed engineering design for two offshore compression complexes, each comprising large offshore platforms, flare platforms, interconnected bridges, and associated structures. On 25 February 25, Technip Energies was also awarded a major EPCC contract by QatarEnergy for the onshore LNG facilities of the North Field West (NFW) project.
- **Abadi** - Technip Energies, in consortium with JGC, was awarded two significant Front-End Engineering Design (FEED) contracts for the INPEX Abadi LNG project in Indonesia's Masela Block on 27 August 27 2025. The project is a landmark development for Indonesia's energy landscape. One FEED contract covers the gas Floating Production Storage and Offloading (FPSO) vessel, which will treat gas before exporting dry gas via a subsea pipeline to the onshore LNG plant for liquefaction. The second contract covers the onshore Liquefied Natural Gas facility, including the design of two LNG trains and supporting infrastructure such as a jetty, materials offloading facilities, and a logistics supply base. CO2 captured from the dry gas will be reinjected into the well. The Abadi LNG project is expected to deliver 9.5 Mtpa of LNG annually.

2027-28 commercial pipeline

Management described the commercial pipeline as robust, supported by global efforts to improve energy security and diversify export routes away from the Strait of Hormuz.

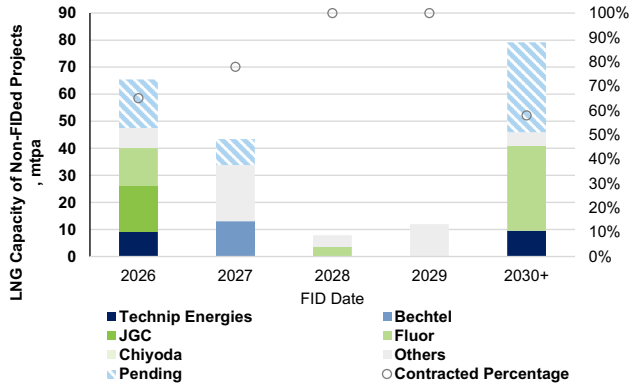

Key opportunities discussed include:

- **UAE export infrastructure:** The company is actively competing for ADNOC-related

projects aimed at reducing dependence on the Strait of Hormuz, including export infrastructure developments on the Fujairah/Oman side. Initial FEED work could be awarded ahead of larger EPC awards in 2027, including Fujairah LNG

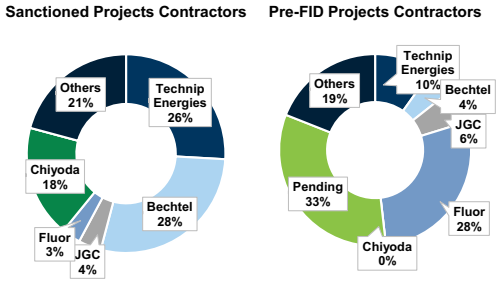

- **Abadi LNG:** Management described momentum on **Abadi LNG** as "really strong," highlighting progress on both floating and onshore facilities. Technip Energies remains involved in the bidding process and sees growing momentum behind the project.
- **Commonwealth LNG expansion:** Potential expansion of the Commonwealth LNG export terminal in Louisiana, adding 7.75 mtpa of liquefaction capacity and creating a sizeable EPC opportunity beyond the initial development phase.
- **Coral FLNG 3:** Potential third floating LNG facility offshore Mozambique, with capacity expected at c.3.5 mtpa, supporting further development of the Rovuma Basin gas resources.
- **Bab Gas Cap project:** Technip Energies (with JGC and Sinopec) is bidding for ADNOC's c.$8bn gas processing facility in Abu Dhabi, designed to increase ADNOC Gas's processing capacity by more than 20%.
- **Qatar remediation opportunities:** Following damage assessments in Qatar, management expects to compete for larger remediation execution packages beginning in **2027 and beyond**.
- **Southeast Asia LNG developments:** The company is seeing accelerating activity across Indonesia, Malaysia, and Australia as countries seek to strengthen domestic energy security. Management indicated that many of the ongoing FEED studies could ultimately convert into major project awards, mostly in **late 2027 and particularly in 2028**.

Strong near-term revenue growth on the back of record-high backlog

Strong three-year order pipeline mainly driven by LNG projects, resulting in a 7% revenue CAGR over 2025-30 and a gradual uplift in margins, supporting a strong balance sheet

In our view, Technip Energies is well positioned for robust order intake over the next two years, primarily driven by LNG-project awards. We expect **LNG to remain the dominant contributor to new orders in the near to medium term, reflecting strong LNG project momentum and FID activity**, while decarbonization and other energy transition markets are likely to contribute more meaningfully over the longer term, in line with management commentary and the currently observed slowdown in low-carbon capex. Overall, **we expect cumulative PD order intake of c.€12bn over the next two years, which should support a solid backlog**. Order intake in the TPS segment has shown some moderation in 2025, and we expect this softer trajectory to continue into 2026, reflecting a more cautious capex environment in low-carbon solutions.

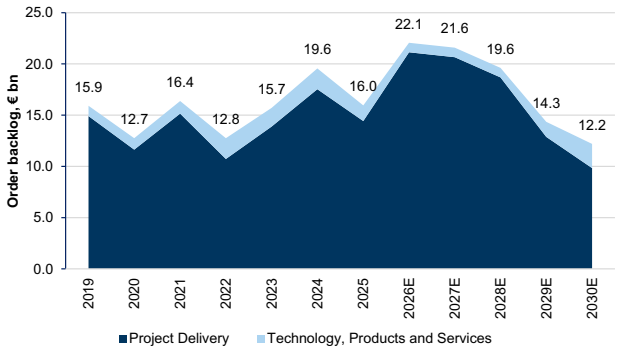

In Exhibit 16, we present our orders tracker, illustrating how announced and referenced projects that have not yet been recognized in the backlog could contribute to Technip Energies' future revenues. **As this backlog converts, it should support steadily growing revenues through the end of the decade (7% CAGR 2025-30), alongside a gradual uplift in margins driven by execution, mix, and an increasing contribution from higher-margin activities**.

Exhibit 13: We expect a cumulative PD order intake of c.€12bn over the next two years...

Source: Company data, Goldman Sachs Global Investment Research

Technip Energies' margin profile reflects its two core business segments: Project Delivery and Technology, Products & Services (TPS). Project Delivery is characterised by lower but stable margins, reflecting the scale and execution-driven nature of EPC contracts, while the TPS segment delivers structurally higher margins, underpinned by proprietary technologies, products, services, and lifecycle-support activities. Over recent periods, margin performance has benefited from strong execution in Project Delivery and, in particular, solid growth and resilience within the services component of TPS.

Looking ahead, we expect gradual margin expansion, supported by a favourable mix and operational leverage across both segments. Management has articulated an ambition for higher group margins by 2028, driven by continued discipline in Project Delivery (8.5% by 2028) and a rising contribution from the higher-margin TPS segment (14.5% by 2028). In addition, the AM&C business is expected to provide incremental upside to TPS margins, further supporting the group's overall margin trajectory.

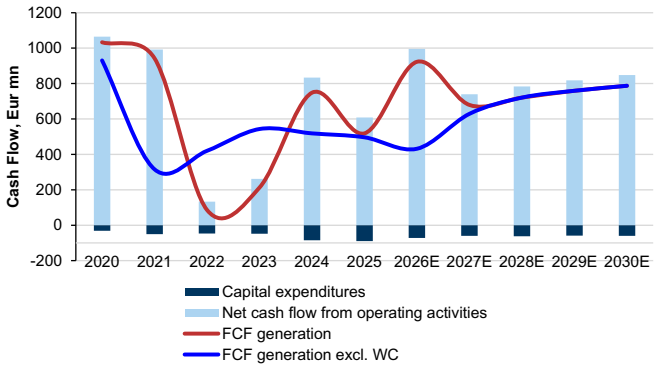

Exhibit 19: We expect gradual margin expansion, supported by a favourable mix and operational leverage across both segments
Margins, %

Source: Company data, Goldman Sachs Global Investment Research

Technip Energies' reported free cash flow has historically shown variability due in part to working-capital fluctuations. As a project-delivery-focused EPC business, cash generation can be inherently lumpy, reflecting the timing of milestone payments, advance payments, and project execution phases. The company reports adj. FCF excl. WC to better illustrate underlying performance. We expect Technip Energies to deliver strong cash flow generation (excl. WC) in the coming years, with a c.29% CAGR over 2026-28, supported by its significant order backlog.

Exhibit 20: We expect Technip Energies to deliver strong cash flow generation (excl. WC) in the coming years with a c.29% CAGR 2026-28, supported by its significant order backlog
Technip Energies cash flow, Eur mn

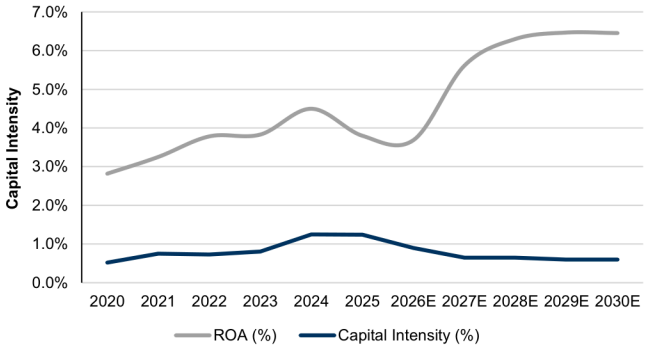

Source: Company data, Goldman Sachs Global Investment Research

Technip Energies operates an asset-light business model, with no exposure to manufacturing activities and limited investment in physical assets. As mentioned earlier in the report, **the company's core assets are its people and engineering capabilities, while fixed assets remain modest and capital intensity is low, with capex typically representing less than 1% of revenues** (Exhibit 21). Capex increased temporarily in 2024-25, primarily reflecting the expansion of US office capacity, but this is expected to normalize going forward. Overall, Technip Energies is not a capital-intensive business, and management has indicated that annual capex of €50-60mn represents a normalised

run-rate for the business.

Exhibit 21: T.EN's core assets are its people and engineering capabilities, while fixed assets remain modest and capital intensity is low, with capex typically representing less than 1% of revenues
Capital intensity, %

€300mn FY26 shareholder return underscores balance-sheet strength
Technip Energies has **a strong balance-sheet position, with net cash of €0.6bn as of 2Q26** (incl. project contingency component), providing capital-allocation flexibility, including targeted acquisitions in high-growth segments such as TPS. We expect this net cash position to strengthen further, supported by robust underlying cash flow generation. Technip Energies prioritizes shareholder returns, with a stated dividend policy targeting the distribution of a minimum 25-35% of free cash flow (excl. working capital), reflecting management's commitment to a sustainable and progressive dividend supported by a solid balance sheet. As outlined in its dividend policy, Technip Energies intends to pay a dividend annually. In addition, while Technip Energies has executed share buybacks in recent years, these have primarily been undertaken to cover employee equity compensation plans and for capital-structure management, rather than as large-scale opportunistic buybacks aimed at returning excess capital to shareholders.

With its 2Q26 results, Technip Energies confirmed its total €300mn shareholder return for FY2026, consisting of the previously announced dividend of €1.00 per share and the €150mn share-buyback programme formally completed as of 1 July 2026. **We see Technip Energies offering a 2.4%/3.7% shareholder return in 2026/27E, with a gradual increase towards the end of the decade, reflecting our expectation of strong cash-flow generation.**

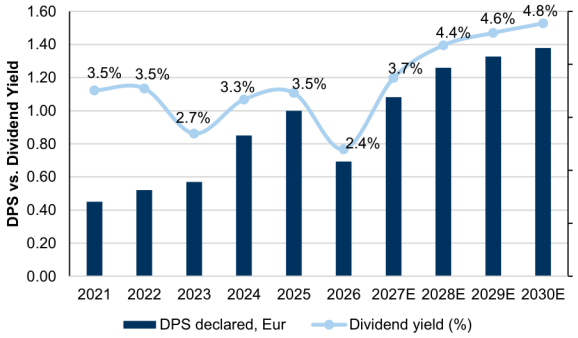

Exhibit 22: Technip Energies has a strong balance sheet position with net cash of €0.9bn, providing capital allocation flexibility

The Middle East situation: implications for Technip Energies

Iranian strikes on energy infrastructure in the Middle East have caused significant disruption to LNG supply. QatarEnergy's CEO confirmed that 17% of Qatar's LNG export capacity has been disabled, affecting two LNG trains and one GTL unit (12.8 mtpa, or ~3% of global LNG supply), with LNG production expected to remain offline for three years and GTL operations expected to resume in 1Q27. QatarEnergy estimates c.$20 bn/year in lost revenues, with the outage requiring force majeure on certain long-term contracts serving Europe and Asia.

T.EN management provided updates on the impact of the Middle East conflict on the company's operations. The ongoing conflict in the Middle East has had a "material impact" on Technip Energies' performance, primarily through severe logistical challenges and incremental costs related to safety and business continuity. While the company has successfully remobilized its sites and achieved record order intake in 1H26, the geopolitical situation necessitated a significant reduction in full-year margin guidance for its core Project Delivery segment, reflecting a prudent assessment of the ongoing conflict in the Middle East. Incremental logistics, safety, and business-continuity costs are estimated at **€30-40mn per quarter**, assuming current conditions persist through the end of 2026. The remaining impact on profitability relates to additional provisions and disputed items. Management does not view the current assumptions as a worst-case scenario and acknowledged potential upside if customer negotiations progress positively. However, guidance reflects the prudent assumption that current conditions remain unchanged through year-end.

Majority of Middle East costs should ultimately be recovered
A key takeaway from the call was management's confidence regarding cost recoverability. The company repeatedly stated that the **majority of the costs incurred are recoverable under contractual protections and should ultimately be recovered**, although timing remains dependent on customer discussions and the evolution of the conflict.

Management highlighted that:

- Several countries have already signed cost-recovery agreements, and the associated recoveries are included in guidance.
- Discussions remain ongoing with only a limited number of countries.
- A very small minority of the current €30-40mn quarterly logistics costs is assumed to be recoverable in guidance today.
- Once agreements are signed, there will likely be a catch-up effect from previously unrecognised recoveries.
- Recovery mechanisms established today would remain valid beyond 2026 for as long as the disruption persists.

Middle East projects remain fully mobilised despite ongoing geopolitical and logistical challenges. While some sites experienced temporary disruptions earlier in the year, Technip Energies confirmed that all project sites were fully mobilised by the end of 2Q26 under enhanced safety protocols. Project execution has nevertheless been

affected by logistical constraints, including secondary impacts from disruptions to key transportation routes such as the Strait of Hormuz. These challenges have resulted in incremental costs related to safety, business continuity, and logistics, although management expects a significant portion of these costs to be recoverable through existing contractual protections over time.

Project-specific detail:

- **QatarEnergy North Field Expansion (NFE):** Commissioning of first process train ongoing and construction of second process train under completion.
- **QatarEnergy North Field South (NFS):** Substantial completion of engineering and piping installation on pipe racks ongoing.
- **QatarEnergy North Field West (NFW):** Early-stage — major EPCC contract just awarded in Q1 2026, still in engineering phase with workforce not yet mobilized on-site. Very little impact from the conflict.
- **Ruwais LNG (UAE):** Civil works across all units well advanced, enabling subsequent construction activities.
- **Marsa LNG (Oman):** Start of piping erection.

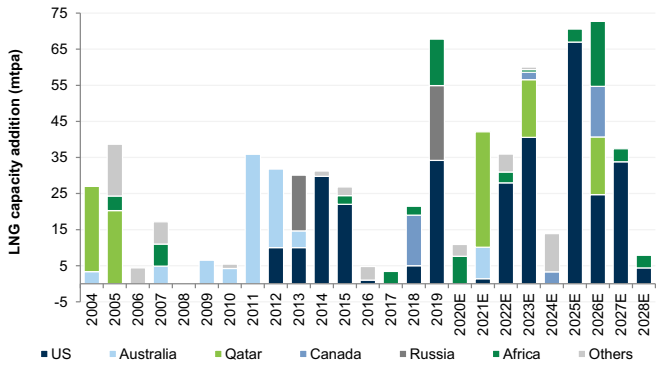

Previously, management highlighted potential opportunities for repair contracts relating to damaged infrastructure in the region:

- **Bahrain project (completed infrastructure):** One project suffered permanent damage, but it was no longer under construction, with T.EN in the process of handing the facility over to the client. No immediate progress; focus is on assessing the situation and determining how to enable repairs.
- **Qatar Trains 4 and 6:** Suffered damage from the conflict (operational facilities not under construction by T.EN). A dedicated repair team has been mobilized, separate from NFE/NFS/NFW project teams to avoid resource competition. Contracting scheme may differ from traditional lump-sum turnkey — potentially more PMC/services/reimbursable to manage exposure.

LNG market overview: Structural LNG oversupply intact, but timing pushed out by Qatari supply losses

2025 saw a substantial volume of FIDs for LNG projects, with total sanctioned capacity of around 71 mtpa (excluding the lifting of force majeure on LNG projects in Mozambique). In 2025, the US re-emerged as a dominant participant in sanctioning new LNG capacity, especially after the temporary permitting pause was lifted. Several major projects have reached FID, signaling a shift towards more agile and flexible project execution. Notable FIDs in 2025 include Woodside Energy's Louisiana LNG Phase 1, Cheniere Energy's Corpus Christi Midscale Trains 8 & 9, and Venture Global's CP2 LNG Phase 1, all with expected start-up dates between 2028 and 2031. Additionally, Argentina's Southern Energy Floating LNG vessel (FLNG) Phase 1 reached FID in May 2025, NextDecade achieved FID for Rio Grande LNG Trains 4-5 in Sep-Oct 2025, Sempra Energy's Port Arthur LNG Phase 2 undertook FID in September 2025, and Coral North FLNG in October 2025. Meanwhile, in October 2025, TotalEnergies lifted the force majeure on its Mozambique LNG project. We expect this wave of capacity expansion FIDs to continue into 2026 and 2027, albeit at a slower pace, with a cumulative 85 mtpa of new liquefaction capacity reaching FID over 2026-29E. At the beginning of 2026, **QatarEnergy formally announced the start of execution of the North Field West (NFW) project**, marking the latest phase of its massive LNG expansion programme.

Exhibit 26: We expect 2026-27 to be the last years of strong LNG FID activity
LNG capacity addition by FID, mtpa

LNG Supply Shock

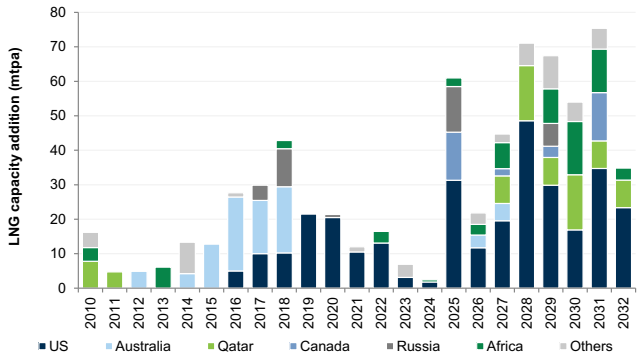

The recent widespread attacks on energy infrastructure across the Middle East suggest that energy-supply disruptions are likely to last longer than previously expected, including structural impacts on LNG supply, with QatarEnergy indicating that ~13 mtpa of LNG capacity (c.3% of global supply) could remain offline for three to five years.

Our commodity analysts now assume that the ~80 mtpa of LNG flows transiting the Strait of Hormuz currently disrupted (c.19% of global supply) will remain offline through mid-April, followed by a gradual, partial recovery to ~66 mtpa (net of the long-term Qatari LNG outage) over a six-week period through late May (vs a full recovery within four weeks previously). In the near term, we see tighter European balances, with potential incremental supply delays supporting higher spot pricing, while we remain focused on the implications for longer-term global gas demand growth. Our US energy

team expects only a limited near-term US supply response, given minimal flexibility to increase LNG exports, with facilities already operating at near-100% utilisation on a run-rate basis. Looking further out, however, the situation may support additional contracting activity as buyers diversify supply and the US gains share, potentially underpinning additional US LNG FIDs.

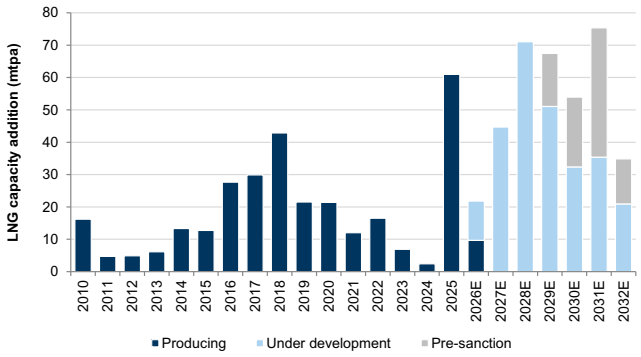

That said, the long-term damage to Qatari LNG supply, combined with our assumption that North Field East Train 1 will be delayed by a further three months (six months versus our pre-conflict October 2026 expectation), **does not reverse our structurally bearish view on European gas and global LNG prices in the coming years, but does delay and moderate it**. Specifically, our commodity team now expects TTF to fall below €20/MWh only in summer 2028 (vs late-2027 previously). In addition, while they continue to expect elevated congestion risks in Northwest European gas balances from 2028–29 and into the early 2030s, **the scale of oversupply is materially lower, now estimated at 3–9% of storage capacity, versus 30–40% previously, significantly reducing the risk of forced global LNG curtailments over that period.**

Exhibit 27: We expect LNG capacity additions to accelerate from c.12 mtpa in 2020-24 to c.53 mtpa in 2025-30, reaching a high in 2028 with a record 71 mtpa
LNG capacity by start-up date, mtpa

Source: Goldman Sachs Global Investment Research

Exhibit 28: In 2026-32, nearly 277 mtpa of new LNG capacity is expected to come online from projects already under construction or having reached FID, which we see leading to lower gas prices in 2028-30 and likely discouraging some liquefaction project FIDs beyond 2028-30
LNG capacity addition

Valuation, methodology and risks

We value Technip Energies on a 50/50 combination of EV/EBITDA and FCF yield, in line with our US teams' US Oil Services coverage. Historically, Technip has delivered a 3-year average FCF yield of ~10%, supported by consistent profitability and a strong balance sheet. On EV/EBITDA, Technip has traded at a 5.9x 3-year average. We observe a strong correlation between the EV/EBITDA multiple and EBITDA growth (Exhibit 29). For our target valuation, we apply a 6.5x EV/EBITDA multiple (up from 4x previously), as now we incorporate NCL part of the project debt when calculating EV derived from our regression of T.EN's historical EV/NTM EBITDA vs NTM EBITDA growth, reflecting the strong EBITDA growth outlook. For target FCF yield, we use 10%, in line with 5Y history.

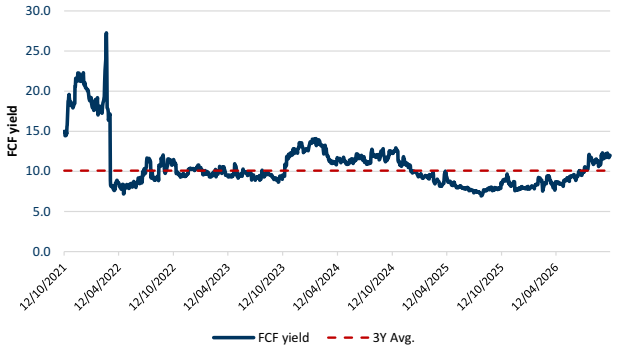

Valuation and 12-month price target: We apply a 6.5x target EV/EBITDA to 2027E EBITDA and 10% target FCF yield (unlevered) to 2027E FCF, and apply a 50/50 weighting to each method. We arrive at a €35 12m price target (from €32 previously), which suggests c.20% upside.

Exhibit 29: We apply a 6.5x EV/EBITDA multiple derived from our regression of T.EN's historical FY1 EV/EBITDA vs FY2/FY1 EBITDA growth

Key downside risks to our view and price target include:

- **LNG project award delays or deferrals**: A slowdown in final investment decisions (FIDs) or delays to major LNG projects could weaken order intake, limiting backlog growth and reducing medium-term revenue visibility.

- **Lower-than-expected win rates on project awards**: Even if LNG projects progress to FID, increased competition could result in lower win rates, limiting order intake relative to expectations, particularly for Rovuma LNG.
- **Execution risk on large EPC projects**: Technip Energies' earnings remain sensitive to execution quality on large, complex projects; cost inflation, supply-chain disruptions, or schedule slippage could pressure margins and cash generation.
- **Prolonged slowdown in low-carbon capex**: A more sustained pullback in decarbonization and energy-transition investments could delay the expected long-term growth contribution from carbon capture, hydrogen, and related solutions.
- **Margin pressure from competitive bidding**: Increased competition in LNG and traditional energy EPC markets could lead to more aggressive pricing, limiting margin expansion and upside to consensus profitability assumptions.
- **Commodity price and macro volatility**: Weakening energy prices, tighter financial conditions, or macroeconomic uncertainty could reduce customer appetite for large-scale energy infrastructure investments.
- **FX and geopolitical risk**: As a globally diversified contractor, Technip Energies is exposed to foreign exchange movements, geopolitical instability, and regulatory changes, which could impact project economics, execution, or cash flows.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Disclosures

Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, and Investment Management Association of Japan. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.

Global product; distributing entities

Goldman Sachs Global Investment Research produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. Supervisory Authority (Bundesanstalt für tungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research within the European Economic Area.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage universe as described herein.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, make a market or act as liquidity provider in, and buy or sell, any securities, derivatives, or other financial instruments referred to in this research (including any financial instruments issued by the companies referred to herein), unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and https://www.goldmansachs.com/disclosures/cftc_fcm_disclosures. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

Disclosure information is also available at https://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.
