

AMERICAS BANKS & IBANKS

The next phase of capital markets growth & the AI infra impact

In this report, we examine the drivers of the step change in capital markets revenue since 2020, as well as market share trends over the past 15+ years. Key highlights:

- While there have been a number of cyclical drivers, in our view, **the single biggest structural driver of revenue growth has been the expansion in the pool of tradable assets and the shift to financing those assets, vs. improved revenue margins.**
- **We expect these structural factors to drive further long-term growth from here, with more growth potential within investment banking and equities.**
- **In the near term, however, AI infrastructure-related capital markets activity has been an important catalyst for both investment banking and equity trading revenue, accounting for a meaningful part of 2026 revenue growth - we look to size this contribution.**
- **US firms across bulge bracket banks, market makers, and independent IBanks have been disproportionate beneficiaries and share gainers from the growth in capital markets, with market share increasing 23pp to 72% from 2010-26E. We also believe that share gains by independent IBanks could slow, given more competition for talent, and the fact that a high percentage of AI investment banking activity has a financing component, which favors large banks.**

Top beneficiaries:

Bulge brackets: Buy-rated **BAC** and **JPM**

IBanks: Buy-rated **EVR, LCLN, PIPR** and **PJT**.

ECM >\$225bn

2026E US IPO Proceeds

Debt Financing \$1.3tn

Debt-financed hyperscaler issuance (2027E-29E)

PM summary

- **Capital markets revenue growth acceleration and ROE expansion.** There has been a step up in capital markets revenue growth since 2019, with a 2019-26E industry fee pool CAGR of 11%, vs. a 2010-19 CAGR of ~1% ([Exhibit 1](#), [Exhibit 2](#), [Exhibit 3](#), [Exhibit 4](#)). We forecast capital markets grow at a 4% 2026E-28E CAGR, i.e., a slower, but still healthy growth rate. We attribute the bulk of this growth to the expansion in the pool of tradable assets, as the increased scale of global debt and equity markets, rather than improved revenue margins. Large bank trading assets are up ~110% since 2019 ([Exhibit 7](#), [Exhibit 10](#), [Exhibit 16](#), [Exhibit 17](#)). Revenue margins have been largely flat over the same time period, with 2Q26 capital markets revenue yields at ~550bps, ~25bps above the long-term average ([Exhibit 7](#)). Banks have benefited from greater balance sheet flexibility following Nov. 2025 SLR reform, with leverage (avg. assets/equity) rising ~5.0x to ~20.0x from 2019-1H26 ([Exhibit 19](#)). Balance sheet growth has been accompanied by operating leverage, with capital markets business efficiency ratios falling 7pp to 53% from 2019-1H26, as higher fixed costs have translated into economies of scale ([Exhibit 14](#)). In aggregate, capital markets ROEs have risen ~8pp to 21% from 2019-1H26 ([Exhibit 5](#)).
- **AI infrastructure-related (AI-related) activity has been the marginal driver of investment banking in 2026...** The growth in both financing requirements and market capitalization of AI infrastructure companies has played a central role in recent IB revenue growth. We estimate that ~50-55% of the growth in combined M&A, ECM and DCM volumes and fees has been driven by AI-related transactions so far this year. 2026 TD industry IB volumes/fees are up 15%/14% YoY, but we estimate AI-related volumes/fees are up ~275%/310% YoY ([Exhibit 24](#), [Exhibit 26](#)). Excluding AI-related activity, industry IB volumes and fees are up only 7% YTD YoY, indicating that underlying activity is less stretched than headline growth implies, and that IBanking (outside of tech / AI related sectors) remains below peak levels.
- **...and a meaningful part of 1H26 Equities revenue growth.** The impact has been evident across both Equities intermediation and financing. We estimate that ~40% of the \$10.8bn YoY growth in 1H26 Equities revenue (or +47% YoY) has been AI-related. On intermediation, we use US market turnover of AI infrastructure as our proxy, which has comprised 72% of the YoY increase in total US market turnover, which we estimate has driven 42% of the intermediation revenue growth ([Exhibit 22](#)). On financing, we use market cap, with AI infrastructure stocks accounting for 77% of the YoY increase in total US equity market cap, resulting in 38% share of Equities financing revenue growth from AI activity ([Exhibit 22](#)). As a result, 1H26 equities revenue ex-AI would be up a more modest ~+30% YoY.
- **Outside of AI, 2026E Equities growth remains strong, while FICC grows slower.**
 - We believe that **Equities** has benefited from secular and cyclical drivers, the durability of which depends on market levels, financing spreads and volatility - we forecast a 5-7% 2026E-28E Equities CAGR for large US banks ([Exhibit 1](#)). Structurally, growth in tradable float has driven volumes, and, in turn, the quantum of leverage clients require to finance those holdings, typically through prime brokerage. We see positive cyclical effects from: 1) equity funding

spreads at ~3x the 3Q20 level, as demand for equity leverage has outpaced industry capacity ([Exhibit 32](#), [Exhibit 33](#)); 2) the IPO pick up impact on secondary trading ([Exhibit 34](#), [Exhibit 63](#)); and 3) single stock vol rising materially more than index vol, representing a greater alpha opportunity for clients, and higher levels of engagement ([Exhibit 36](#), [Exhibit 37](#)).

- We expect **FICC** to grow at a slower pace than equities in 2026E, at a 2-4% 2026E-28E CAGR ([Exhibit 1](#)), roughly in-line with nominal GDP, as a subdued vol backdrop limits intermediation, and a mix shift toward financing, as evidenced by 13% p.a. alternatives AUM growth since 2014 that has driven large bank Markets NII up ~105% since 1Q21 ([Exhibit 38](#), [Exhibit 40](#), [Exhibit 41](#)). Looking forward, the \$3.3tn of 2026E-28E hyperscaler capex forecasted by GS Internet Research, which could drive ~\$1.3tn of debt financing over 2027E-29E (per GS Credit Strategy), could act as a powerful driver of DCM and FICC intermediation revenue ([Exhibit 69](#), [Exhibit 70](#)).
- **Investment banking growing across all three products but remains mid-cycle.** We forecast a 4% 2026E-28E fee pool CAGR, following a 6% CAGR from 2019-26E, driven by a broadening in the types of transactor, as well as the more recent AI impacts ([Exhibit 1](#), [Exhibit 42](#)).
 - **Advisory:** We expect further Advisory growth (a 10% 2026E-28E CAGR - [Exhibit 1](#)). We forecast a 19% NTM M&A industry volume growth, and see a further ~65-75pp of cycle M&A growth ahead ([Exhibit 46](#), [Exhibit 47](#)). The defining feature of M&A today is its two-speed nature, with strategic and large-cap activity already close to or above prior peaks, while sponsor and mid-cap activity remains materially below. We expect the latter two to begin to catch up, as LP pressure mounts on GPs, and if geopolitical concerns decline.
 - **ECM:** We forecast a 5% 2026E-28E revenue CAGR, following an 8% 2019-26E CAGR ([Exhibit 1](#), [Exhibit 44](#)). Recent growth has been driven by robust tech sector (largely AI-related) activity, with tech ECM comprising ~75% of YTD growth ([Exhibit 64](#)). We see growth continuing, highlighting that GS Portfolio Strategy forecasts \$225bn of US IPO volumes ([Exhibit 63](#)). Longer-term, we expect ECM growth to continue, given a potentially broadening out of activity, across (in certain cases overlapping) non-tech sectors and sponsors ([Exhibit 64](#), [Exhibit 66](#)).
 - **DCM:** We forecast a 3% 2026E-28E revenue CAGR, following a 5% 2019-26E CAGR ([Exhibit 45](#)), with growth driven by: 1) AI-related financing, a meaningful portion of which should flow through to bank DCM ([Exhibit 69](#), [Exhibit 70](#)); and 2) our constructive M&A view that should also support DCM, given the debt financed component of a meaningful portion of M&A activity, with a 78% correlation between M&A volumes and lev fin issuance ([Exhibit 71](#)).
- **US firms have continued to take cap markets revenue share.** US firms, across bulge brackets, independent IBanks and market makers, have increased revenue market share by 23pp between 2010-26E to 72%, with US market makers rising from de minimis share of total trading to 21% ([Exhibit 72](#), [Exhibit 73](#)). In Equities, US bulge brackets have taken 23pp of share to 69%, with the top 3 benefiting disproportionately, adding 18pp to reach 52%. We believe that much of these gains has been driven by increased concentration of both capital raising and trading volumes in the Americas, and exits

by certain European/Asian banks ([Exhibit 74](#), [Exhibit 75](#)). In 2026 TD, we estimate that 47% of total ECM volume is in US markets (vs. 26% a decade ago - [Exhibit 80](#)), and 58% of global equity share volume is in the US, vs. 43% in 2015. In FICC, US bulge brackets have taken 14pp of share from 2010-26E, and the top 3 firms have seen 9pp of share gains ([Exhibit 76](#), [Exhibit 77](#)). In investment banking, independent investment banks (IBanks) have been notable share gainers, adding 17pp to reach 25% ([Exhibit 78](#), [Exhibit 79](#)).

- **Independent IBank share gains, a consistent feature of the past decade, likely to slow from here.** An 11% MD CAGR over the past decade drove revenue market share gains of 21pp in M&A, 14pp in ECM, and 2pp in DCM ([Exhibit 78](#), [Exhibit 79](#)). We forecast only 3pp of further share gains from 2026E-28E. Structurally, we attribute this to: 1) a more competitive bid for talent from bulge brackets; and 2) more fully built out sector footprints, leaving less white space in which to hire ([Exhibit 88](#)). Cyclically, the backdrop for IBanks is less favorable, with the % of M&A transactions involving a financing component rising for five consecutive years, which has historically favored US bulge brackets, given relatively broader financing capabilities. Further, IBanks' greater sponsor skew has impacted them, as sponsor M&A has lagged strategies ([Exhibit 89](#), [Exhibit 90](#)). In ECM, we view IBanks' share as cyclical rather than structural, given narrow exposure to healthcare, and we do not expect them to generate material DCM share gains, given capital-light models ([Exhibit 91](#)).
- **Top beneficiaries:**
 - **Large-cap banks:** We continue to be constructive on large banks that could see market share gains in trading, as they increase capital allocation to the business, given the enhanced opportunity set. We expect solid momentum in investment banking, given capital intensity of the AI infrastructure build-out. Moreover, we believe that revenue growth for the largest firms should continue to translate to operating leverage, due to economies of scale. Best positioned: Buy-rated **JPM** and **BAC**, and Neutral-rated **MS**.
 - **Independent investment banks:** We prefer firms geared to a mid-cap & sponsor acceleration, specifically Buy-rated **LCLN** and **PIPR**. We also prefer firms that offer structural growth, are more likely to be able to outgrow potentially more limited market share gain opportunities among IBanks, and benefit from continued non-M&A growth, specifically Buy-rated **EVR** and **PJT**.

Equity research views are expressed by Richard Ramsden and James Yaro, Equity Research Analysts covering financials. Portfolio Strategy research views are expressed by Ben Snider, the US Portfolio Strategist.

Exhibit 1: After 11% p.a. growth from 2019-26E, we expect industry capital market fees to grow 4% p.a. through 2026E-28E

Industry capital market fees							
\$bn / %	2010	2019	2026E	2028E	2010-19 CAGR	2019-26E CAGR	2026E-28E CAGR
Advisory	15	27	48	58	7%	9%	10%
ECM	13	11	20	21	-1%	8%	5%
DCM	13	22	31	33	6%	5%	3%
IBanking	62	78	114	123	3%	6%	4%
FICC	119	83	134	141	-4%	7%	2%
Equities	55	52	122	133	-1%	13%	5%
Trading	178	148	340	365	-2%	13%	4%
Total cap markets	240	225	454	488	-1%	11%	4%

Note: IBanking and Trading totals do not equal the sum of their products (Advisory, ECM, DCM and FICC, Equities), given certain market makers and non-US banks report only aggregate trading or IBanking revenue, rather than product revenue breakdowns, thus these firms are only included in total trading and IBanking.

Source: Visible Alpha Consensus Data, Company data, Goldman Sachs Global Investment Research

Capital markets fees continue to grow, and ROEs rise, driven by growth in tradable float of assets, and higher markets

After remaining largely flat from 2010–19, the capital markets fee pool has seen significant growth, rising at an 11% CAGR from 2019–26E to \$454bn ([Exhibit 2](#)). We expect this growth to continue, albeit at a slower pace, rising at 4% p.a. from 2026E–28E, with the estimated fee pool reaching \$488bn. We see structural fee pool growth, driven by: 1) expansion in the pool of tradable assets contributing to growth in intermediation fees; 2) the growth in businesses financing this asset growth (Prime brokerage and NDFI lending in particular), which have contributed to significant growth in markets NII; 3) higher market cap driving increased M&A and underwriting fees; 4) the significant financing need from AI capex, which increasingly is being financed by capital markets (see subsequent section on AI impacts on cap markets businesses); and 5) the trading balance sheet flexibility created through additional SLR capacity post recent SLR reform (see [report here](#)). Structural growth has driven higher returns on equity for large banks' capital markets businesses, which have risen ~8pp from 2019–1H26 to 21% ([Exhibit 5](#)). Notably, this ROE improvement in capital markets businesses has been driven by a combination of balance sheet growth and margin expansion, vs. an improvement in revenue margins as trading revenue yields and investment banking fee rates are largely unchanged over the past decade ([Exhibit 7](#), [Exhibit 11](#), [Exhibit 14](#)). Growth in fee pools has been structural across both trading and investment banking, with industry trading fees rising at a 13% 2019–26E CAGR, and we expect 4% per annum growth from 2026E–28E ([Exhibit 3](#)). Investment banking industry fees have risen at a 6% 2019–26E CAGR, and we expect 4% per annum growth from 2026E–28E ([Exhibit 4](#)). Further detail on drivers underpinning structural growth in the fee pools:

- **Growth in float of tradable assets and equity market cap:** Large bank trading assets have grown ~110% from 2019–2Q26, and capital markets' lending has grown by ~90% from 1Q19–2Q26 ([Exhibit 16](#), [Exhibit 17](#)). We believe that much of the growth in trading balance sheets has been driven by the increase in size of debt and equity market capitalization, which has increased the pool of tradable assets, and hence intermediation fees. Further, trading businesses have benefited from significant growth in non bank financing activity which has supported growth in NII in markets businesses over the last 5 years. The increase in large bank trading assets has been driven by Other trading assets (~+175%), and MBS (~+145% - [Exhibit 15](#)). Global equity market cap has risen by ~225% from 2010–2026 ([Exhibit 10](#)). Market cap drives investment banking revenue directly in the case of M&A (fees are a % of market cap), and indirectly in the case of underwriting, given that larger markets can absorb larger issuance.
- **Revenue yields / fee rates largely flat:** Despite the significant growth in the float of tradable assets and trading revenue, large cap banks' trading revenue yields have remained largely flat at 550bps, or ~25bps above the long-term average, and investment banking fee rates have remained at +/-60bps - across both trading products, and all three trading businesses, fee pressure has only been evident in DCM, a small portion of the fee pool ([Exhibit 7](#), [Exhibit 8](#), [Exhibit 9](#), [Exhibit 11](#), [Exhibit 12](#), [Exhibit 13](#)). This implies that the growth in capital markets revenue is more a function of the larger

pool of tradable and financeable assets, vs improved pricing, despite the increased concentration of market share.

- **Margin expansion:** Large banks have delivered notable operating leverage, with efficiency ratios falling from ~60% in 2019 to ~53% in 1H26 ([Exhibit 14](#)) as the largest firms have benefited from economies of scale. We note that the top 3 firms have seen ~900bps of efficiency ratio improvements, which are ~350bps more than the industry average from 2022-1H26 ([Exhibit 14](#)).
- **Leverage has risen:** The growth in balance sheets across the large banks' capital markets businesses has corresponded to increased leverage across the group, with leverage (defined here as average segment assets / average segment equity) increasing from ~15.0x in 2019 to ~20.0x in 1H26 ([Exhibit 19](#)). We believe part of this increased leverage relates to SLR reform, which was finalized in November, 2025. This rulemaking allows banks to operate with a degree more balance sheet leverage. It would disproportionately impact certain trading businesses, which are low risk, but low-ROA, i.e., those that consume notable leverage capital, but limited risk-based capital. An example is the repo business, which has grown at a 7% CAGR on average across the group since 2019, but more recently, has grown 19% p.a. from 2024-2Q26 ([Exhibit 20](#)).

Exhibit 2: We anticipate total capital market fees to grow by 4% p.a. through 2026E-28E after an 11% 2019-26E CAGR...

Exhibit 5: Average returns on equity for capital markets businesses have increased ~8pp from 2019-1H26 to 21%

Note: We use the average of BAC, C, JPM, MS, and WFC. For BAC, we use total net income and allocated capital across their Global Markets and Global Banking businesses to compute return on average allocated capital from 2013. For C, we use total net income and allocated TCE of their Markets and Banking businesses to compute ROTCE since 2021. For JPM, we use CIB's ROE since 2013. For WFC, we use CIB's return on allocated capital since 2019. For MS, we use Institutional Securities' ROE from 2013-1H26.

Source: Company data, Goldman Sachs Global Investment Research

Exhibit 6: We project a ~5pp ROE expansion on average between 2022-26E

2022-26E capital markets businesses Dupont analysis	Total revenue CAGR	Efficiency ratio delta	Revenue yield delta	ROA delta	Change in leverage	ROE delta
BAC	7.3%	-1.3%	0.09%	0.04%	0.6x	1.2%
C	6.8%	-5.2%	-0.04%	0.07%	6.3x	4.8%
JPM	11.8%	-7.1%	-0.11%	0.18%	2.3x	5.5%
MS	13.3%	-9.3%	0.43%	0.32%	7.2x	13.0%
WFC	8.9%	-2.4%	0.24%	0.08%	0.0x	1.3%
Other	12.7%	-3.1%	0.36%	0.13%	3.5x	6.0%
Average	10.1%	-4.7%	0.16%	0.14%	3.3x	5.3%

Note: For BAC, we use Global Markets' and Global Banking's total revenue, total noninterest expenses, total average assets and total average allocated capital. For C, we use Markets' and Banking's total revenue, total noninterest expenses, total average assets and total average allocated TCE. For JPM, we use CIB's total revenue, noninterest expenses, average assets and average equity. For MS we use ISG's total revenue, noninterest expenses, average assets, average common equity and reported ISG ROE; MS moved certain assets in 1Q26 from the Wealth Segment into ISG, which may explain some of the higher leverage. For WFC, we use CIB's total revenue, noninterest expenses, average assets and average allocated capital. For MS following MSBNA's Q126 acquisition of MSESE and integration of MSCS's Fixed Income business, MS updated its segment balance sheet allocation methodology, reallocating select assets from Wealth Management to Institutional Securities.

AI a key driver of both Equities and investment banking in 2026

We believe that the AI infrastructure theme has driven a meaningful part of the capital markets revenue growth in 2026, specifically in Equities trading and the investment banking businesses. Our analysis suggests that AI-related equities trading and financing has driven ~\$4.5bn of the \$34bn of 1H26 equities trading, or ~40% of the \$10.8bn YoY growth in 1H26 Equities trading (Exhibit 21). Furthermore, we estimate that AI-related investment banking activity has driven ~\$6.5bn of the ~\$80bn of industry YTD investment banking fees, or ~50% of the ~\$10bn YoY (14% YoY) growth (Exhibit 23, Exhibit 24). Lower ex-AI-related growth in both Equities and investment banking suggest that there is further room for investment banking activity to pick up outside of the tech sector.

- **AI-related impact on Equities:** The Equities business has benefited from AI-related activity across both Equities intermediation and financing. Our estimates suggest that 42% of the intermediation revenue growth, and 38% of the financing revenue growth can be attributed to AI, after accounting for AI activity in the US and normalizing for the US portion of the equities wallet (Exhibit 21). Given that financing comprises an estimated 33-48% of total Equities revenue across the group, we estimate that ~40% of YoY Equities growth is AI-related (Exhibit 21).
 - In the Equities intermediation business, AI infrastructure stocks have driven a meaningful percentage of the increase in US equity market volume in 2026 which in turn has supported growth in intermediation fees. AI infrastructure (based on GS Portfolio Strategy's AI disruption categorization) have comprised 40% of 2026 YTD total US equity market turnover, up from 29% in 2025 (Exhibit 22). This implies that 72% of the total increase in US equity turnover YoY has been driven by AI infra stocks. We normalize this % by the fact that the US represents 58% of the Equities wallet, implying that AI infra has driven 42% of the increase in equity intermediation YoY. Stripping out the impact of higher volumes in AI stocks would imply that equity intermediation revenues would only be up ~20% YoY vs the reported ~35%.
 - In the Equities financing business, we look at the contribution of US equity market cap of AI infrastructure stocks. AI infrastructure stocks comprise 35% of 2026 YTD US equity market cap, up from 30% in 2025; this results in 77% of the US equity market cap increase YoY being driven by AI infra stocks only. Upon normalizing for the fact that the US represents ~50% of the global market cap, this implies that 38% of YoY Equities financing growth in the US has been driven by AI infrastructure stocks (Exhibit 21).
- **AI-related impact on investment banking:** Industry announced investment banking fees have risen by ~\$10bn (or 14%) YoY to ~\$80bn - this is comprised of ~\$1.7bn of YoY M&A fees growth (6% YoY), \$6.2bn of ECM fees growth (68% YoY), and \$2.2bn of DCM fees growth (7% YoY) (Exhibit 23). However, growth ex-AI infrastructure activity is much lower. We estimate that AI-related investment banking fees have grown ~310% YoY, vs. non-AI-related investment banking fees +7% YoY (Exhibit 24). This suggests that ~50% of the YTD YoY investment banking fees growth is AI-related, or

12%/47%/85% of the M&A/ECM/DCM respectively. Investment banking volumes have seen similar directional trends. Volumes have risen by ~\$2.2tn/15% YTD YoY to ~\$16.9tn - this is comprised of ~\$930bn of YoY M&A volume growth (31% YoY), ~\$430bn of ECM volume growth (84% YoY), and ~\$850bn of DCM volume growth (8% YoY) ([Exhibit 25](#)). Decomposing the growth between AI and non-AI-related investment banking, estimated AI-related investment banking volumes have grown ~275% YoY, vs. non-AI-related investment banking volumes +7% YoY ([Exhibit 26](#)). Part of the delta in growth is related to fee rates - we estimate that the investment banking fees on AI-related transactions are lower than those on non-AI-related transactions - specifically, we estimate AI-related investment banking transactions have 40bps fee rates, vs. 48bps for non-AI-related transactions ([Exhibit 27](#)). In terms of our methodology, we adjust out minority investments in AI companies within M&A, and all ECM and DCM transactions we believe are related to AI companies.

Exhibit 21: We estimate ~40% of the 47% 1H26 YoY equities revenue increase can be attributed to AI-related equities revenue

1H26 US Banks Equities revenue growth YoY (Total and estimated ex AI)			
(\$bn/%, unless mentioned otherwise)	Sc. 1	Sc. 2	Key
1H25 Equities revenue	23.2		A

Equities continues to grow on expansion of financing business, IPOs, and market vol

The Equities fee pool has grown at a 13% CAGR from 2019–26E, after being range bound in the previous decade ([Exhibit 28](#)). We assume fee pool growth slows, but remains reasonably healthy at a 5–7% CAGR across large banks from 2026E–28E. While we see long-term Equities fee pool growth driven by the structural tailwinds of growth in tradable assets and thus trading volumes, as well as the expansion of the prime brokerage that finances the increased pool of tradable assets, we believe that the Equities fee pool growth from 2024–26E (27% p.a.) has been heavily impacted by positive trends across four cyclical factors, the durability of which will be driven by market volumes, levels and volatility. We view AI infrastructure stock-related activity as the most important of the four cyclical factors, and we estimate that this has driven ~40% of the 2026 YoY step up in Equities trading (further detail in previous section). In addition, we see positive cyclical effects on the business from: 1) Widening equity financing spreads as demand for leverage to equities has increased; 2) an improving equity capital markets backdrop; and 3) higher equity market volatility, and recently, single stock vol has risen more than equity index vol.

- **Growth of tradable float has led to continued growth in trading volumes...** We have seen persistent growth in global single stock and ETF trading volumes, which have driven greater Equities intermediation revenue. Global single stock/ETF volumes have risen at 20%/22% 2019–26 annualized CAGRs ([Exhibit 30](#)). Of the single stock volumes, for which we have regional breakdowns, we have seen 19%/20% US/non-US 2019–26 annualized CAGRs ([Exhibit 31](#)).
- **...and structural growth in prime brokerage to finance tradable float growth:** As tradable float across asset classes increases, clients need a greater quantum of leverage to finance this asset growth, which is typically done through the prime brokerage business. We see this driving the >4x estimated growth of large bank Equity financing revenue from 1Q19–2Q26, vs. only 3.3x growth of Equities intermediation ([Exhibit 29](#)).
- **Aside from AI-related impacts, we see three other cyclical trends that have accelerated Equities growth over the past two years:**
 - a. **Wider equity funding spreads:** Over the past two years, equity funding spreads, which is the cost of financing to acquire leveraged exposure to equities, have widened out materially, at ~3x the 3Q20 levels, as clients have been willing to pay more for leverage ([Exhibit 32](#)). We believe this is in part due to cyclical demand for equities exposure, with prime gross/net leverage up from 260%/67% at the end of 2023 to the 300%/78% levels now ([Exhibit 33](#)).
 - b. **Recovery in the IPO market drives secondary trading:** Growth in primary IPO markets drives associated secondary trading of both the IPO shares, as well as subsequent trading of those shares and secondary share sales. We see a 69% R-squared of IPO volumes and Equities revenue ([Exhibit 34](#)). GS Portfolio Strategy forecasts ~440% growth of IPO volumes in 2026E, after ~50% YoY growth in 2025 ([Exhibit 63](#)).

- c. **Equity volatility has increased, and recently, single stock vol has risen more than index vol:** Volatility in the equity market drives intermediation revenue, as clients look to adapt to changing market levels. We see a 14% correlation of equity revenue and equity market vol, for which we use the VIX ([Exhibit 35](#)). The VIX has risen notably since 2025, vs. the previous few years. Moreover, vol has not risen uniformly, with single stock vol rising much more than index vol ([Exhibit 36](#), [Exhibit 37](#)). Greater single stock vol represents more alpha opportunities for clients, thus driving more activity, as well as Equities intermediation revenue.

FICC fee pool appears likely to grow at roughly GDP growth levels

We expect the growth rate in the FICC fee pool from 2019-26E of 7% to drop going forward to closer to a 2-4% CAGR (Exhibit 38). In our view, the continued, slow growth in the FICC fee pool is largely the result of a mix shift in FICC business from intermediation to financing. Specifically, we see the ongoing growth in FICC financing, vs. a persistently subdued vol backdrop in many FICC products, limiting intermediation revenue growth. Historically, FICC revenue has correlated with volatility across FICC products - like Equities, a volatile market backdrop prompts client activity (Exhibit 39). However, the correlation has broken down more recently, with FICC revenue notably outperforming normalizing fixed income product volatility metrics. We believe this is driven by the growth of FICC financing - alternative asset management AUM has grown at a 13% CAGR from 2014-2025 (Exhibit 40). Much of this AUM needs to be financed, and has led to growth in FICC financing businesses. We see this evidenced by large banks' Markets businesses, which have seen their NII grow ~105% from 1Q21-2Q26 (Exhibit 41).

Exhibit 38: We project total FICC trading revenue to grow at 2% p.a. through 2026E-28E to ~\$141bn after a 7% 2019-26E CAGR

Source: Visible Alpha Consensus Data, Company data, Goldman Sachs Global Investment Research

Exhibit 39: FICC trading revenue has historically correlated to volatility, but revenue growth has recently notably outperformed vol...

Note: For volatility we use an average of FX, rates, commodities, and credit volatilities. For FX volatility, we use JPMVXYGL US Dollar JPMorgan VXY Global Index. For rates, we use an average of Fed funds, 2Y UST, 5Y UST, 10Y UST, and 30Y UST. For commodities we use an average of WTI, Brent, natural gas, gold, and silver. For credit, we use the average of HY and IG. For 2026E, we use estimated revenue and YTD average volatility.

Investment banking experiencing growth as a result of AI, but remains mid-cycle, with potential upside from sponsors

We expect the 6% 2019–26E investment banking revenue pool CAGR to largely continue, with our forecasts embedding a 4% 2026E–28E CAGR, as we see growth in each of the businesses, across M&A, ECM, and DCM, driven by broadening out of the types of transactor, as well as the more recent impact of AI-related activity (Exhibit 42). We expect the financial sponsor and mid-cap areas of the investment banking market to begin to catch up to already strong strategic and large-cap investment banking activity. While strategic and large-cap parts of the market appear already closer to peak levels, they could grow modestly, and certainly remain elevated for some time. We forecast 19% NTM industry announced M&A volume growth, driven by the fact we believe we are mid-cycle, supportive macro factors, as well as a potential improvement in sponsor activity. Supporting a constructive ECM outlook, in the near-term, GS Portfolio Strategy expects ~440% growth in US IPOs in 2026E YoY. We expect longer-term growth could be supported by a broadening out of activity beyond the tech sector, and a related improvement in sponsor activity. Finally, within DCM, debt-financing of AI hyperscaler CapEx is likely to drive activity – GS Credit Strategy forecasts ~\$1.3tn of debt financing needs from the top 5 hyperscalers alone over 2027E–29E (Exhibit 70). In addition, a large portion of DCM, specifically the leveraged finance markets, are heavily correlated to M&A, and thus an improvement in the M&A markets should support DCM growth as well (Exhibit 71). Finally, AI-related activity is another key driver more recently of the acceleration in investment banking, as we note above – whereas investment banking YTD YoY volumes/fees are up 15%/14% each, excluding estimated AI-related activity, growth is a more modest 7% YoY (Exhibit 24, Exhibit 26). Further detail on product level investment banking forecasts below.

Exhibit 42: We project total IB fees grow 4% p.a. through 2026E-28E to ~\$123bn, after a 6% 2019-26E CAGR

M&A

We expect further growth in M&A in 2026 within a multiyear growth cycle. We forecast 19% YoY M&A volume growth

over NTM, after ~30% YoY YTD in 2026E ([Exhibit 47](#)). We continue to view this as a typical 4-5 year trough-to-peak cycle (excluding the abbreviated 2020-21 cycle), and if M&A growth this cycle ends up following the experience of the past 4 M&A cycles, there could be ~155-165% growth in industry M&A volumes from trough-to-peak over 4-5 years ([Exhibit 46](#)). After the growth in 2024-26 TD, this would still leave an additional ~65-75pp growth left in the cycle, suggesting we are solidly mid-cycle ([Exhibit 46](#)). As a % of market cap, M&A remains near trough levels, which further supports our expectation for further growth ahead. As a % of equal-weighted market cap, M&A remains near all-time lows, currently at ~6.5%, vs an average of ~9.5% over the past ~15 years, and ~10% in 2021 ([Exhibit 48](#)).

We believe the growth rate of large-cap and strategic M&A could slow from currently elevated levels, whereas we are more optimistic on sponsor/mid-cap M&A growth accelerating. We believe much of the strength in large-cap and strategic M&A has been due to corporates taking advantage of a more accommodative US antitrust enforcement posture, with growth from here likely driven by whether strategics feel a yet greater urgency to act before this US presidential administration ends. Sponsor M&A volumes have been muted, driven by a valuation disconnect between buyers and sellers, with assets acquired when rates were materially lower. However, we see volumes rise as LP pressure mounts on GPs, and note that sponsors remain an area of structural growth. Mid-cap M&A has not taken off nearly as much as large-cap M&A, given the lack of an antitrust impulse to conduct transactions, meaning that volumes have been more heavily impacted by negative geopolitical and macro trends.

- **We see a number of improving key economic indicators that should support M&A growth:** M&A has a reasonable correlation with economic growth and market cap over the long term, with global M&A volumes and fees having grown at the same 6-7% CAGR as global nominal GDP and market cap growth over the past 25 years ([Exhibit 49](#)). We would expect this relationship to hold going forward. The leading indicator with the highest correlation to M&A, equity markets, was up materially in 2025 (equal-weighted S&P 500 ~+10%, equal-weighted STOXX 600 +15%), and again in 2026 YTD (equal-weighted S&P 500 +13%/STOXX 600 +10%)¹. GS Equity Strategists expect 9% S&P 500 appreciation over NTM (report [here](#)). GS Economists expect US/EU/Chinese GDP to rise ~2.1%/0.8%/4.6% in 2026E YoY. Further, uncertainty has diminished over the past few months, with CEO confidence up ~10% vs. September 2025 levels. We also see structural imperative for companies to adapt business models to an evolving world, especially through technological progress, e.g., AI, as well as political changes. Limited transaction activity in 2023-24 exacerbated the need to adapt.
- **Further, near-term M&A indicators suggesting further improvement also look healthy**, with industry M&A backlogs up 21% YoY (report [here](#)).
- **Comparing strategic & large-cap vs. sponsor and mid-cap trends and the rationale for sponsor / mid-cap to outperform:**

¹ as on 9/1/2026

- **Strategic & large-cap:** YTD announced strategic/large-cap M&A volumes are up ~45%/75% YoY, and up ~110%/210% from the recent cyclical trough (in 2023-24) on an annualized basis ([Exhibit 50](#), [Exhibit 51](#), [Exhibit 52](#), [Exhibit 53](#)). YTD annualized levels are ~30%/40% above all-time historical annual peaks. Strategic/large-cap volumes are at 4.7%/2.2% of global equal weight market-cap, which compare to 6.7%/1.9% on average over the past 17 years - large-cap market cap-weighted M&A volumes are above the long-term average for the first time since 2020 ([Exhibit 54](#), [Exhibit 55](#)). Further, the average M&A transaction deal size is up 25% YoY, and sponsor M&A is only ~27% of YTD announced M&A volumes, vs. 35%/32% over the trailing 5-yr/10-yr averages ([Exhibit 56](#), [Exhibit 57](#)).
- **Sponsor & mid-cap:** YTD announced sponsor/mid-cap M&A volumes are up only ~5%/30% YoY, and up ~55%/35% from the recent cyclical trough on an annualized basis ([Exhibit 50](#), [Exhibit 51](#), [Exhibit 58](#), [Exhibit 61](#)). YTD annualized levels remain ~20% below all-time historical annual peaks. Further, sponsor/mid-cap volumes are at 2.1%/4.4% of global equal weight market-cap, which compare to 2.6%/7.4% on average over the past 17 years - in particular, mid-cap market cap-weighted M&A volumes remain near the lows over the past 17 years ([Exhibit 60](#), [Exhibit 61](#)). That being said, we see early signs of an inflection, with July/August 2026 sponsor M&A volumes up ~35%/5% YoY. Further, structural PE M&A drivers remain, namely large \$s of aged, deployed capital that needs to be returned, and large quantities of uncommitted capital that need to be deployed. Consider that sponsor M&A fees have grown by ~1,400% since 2001, vs. strategic fees ~+125% ([Exhibit 62](#)).

ECM

We anticipate strong ECM growth going forward, and forecast a 5% 2026E-28E growth CAGR in ECM revenue across our covered companies, after an 8% 2019-26E CAGR (Exhibit 44). Recent growth has been driven by robust growth in tech sector activity, with tech ECM up 295% YoY YTD, which we attribute in material part to AI-related activity, as we note above (Exhibit 64, Exhibit 26).

- **For the balance of 2026E**, we see growth continuing, highlighting GS Portfolio Strategy forecasts for \$225bn of US IPO proceeds, up 440% YoY, due to improving trends, as outlined in the IPO Barometer, and recent changes to the outlook for potential launches by some of the largest private companies (Exhibit 63).
- **Longer-term, we expect growth in ECM to continue**, given a potentially broadening out of activity, across (in certain cases overlapping) non-tech sectors and sponsors. Whereas total ECM activity has risen ~85% YoY, ECM ex-tech ECM is up a much more modest ~25% YoY, with tech having comprised ~75% of the YTD ECM volume growth, leaving room for other sectors to improve, in our view (Exhibit 64Exhibit 65). If we compare 2026 LTM volumes to global equal weighted market cap (representing the size/capacity of the equity market into which companies are issuing), they are at 1.3%, vs. a 2.1% 15-year historical average (Exhibit 67). Further, 2026 ECM volumes ex-tech as a % of global equal weighted market cap are even more below the historic trend, at 0.9%, vs. a 1.8% 15-year average (Exhibit 68). As with sponsor M&A, sponsor ECM remains subdued, at only 12% of total 2026 ECM volumes, vs. 15% over the past 10 years, suggesting growth potential from here (Exhibit 66). We believe that there is overlap between sector ECM activity broadening and improving sponsor ECM, due to the fact that many private equity firms' holdings are concentrated in non-tech sectors,

e.g., in industrials.

Exhibit 63: US IPO gross proceeds are projected to be slightly more than \$225bn in 2026E, up 440% YoY

Note: Data from GS Portfolio Strategy; Universe consists of US deals greater than \$25mn in value.

Source: Dealogic, Goldman Sachs Global Investment Research

DCM

We forecast 3% 2026E-28E DCM revenue growth, following a 5% 2019-26E CAGR (Exhibit 45) We see growth driven by two key factors:

- **The impact of AI-related financing activity:** GS' Internet Equity Research team forecasts \$3.3tn of 2026E-28E hyperscaler (i.e., AWS, MSFT, GOOGL, META, ORCL) CapEx, which GS Credit Strategy forecasts could drive ~\$1.3tn of debt issuance by these firms over 2027E-29E (Exhibit 69, Exhibit 70). We expect a meaningful portion of this issuance to be financed through DCM by the bulge bracket banks.
- **M&A activity drives DCM:** A meaningful portion of M&A activity involves a debt financing component, especially in acquisitions of non-investment grade companies. We observe a 78% correlation between M&A volumes and the acquisition financing-related components of DCM, high yield bonds and levered loans (Exhibit 71). As such, our constructive view on M&A likely drives DCM growth as well.

Exhibit 69: The GS Internet Equity Research team forecasts \$3.3tn of 2026E-28E hyperscaler CapEx...

Source: Goldman Sachs Global Investment Research

Exhibit 70: ...resulting in GS Credit Strategy team forecasting ~\$1.3tn of potential debt financing by these firms from 2027E-29E

Note: Excludes data center financings issued by special purpose vehicles. CapEx estimates as of August 11, 2026. Hyperscalers include Amazon, Alphabet, Meta, Microsoft, and Oracle.

Market share accrues to US firms, although to different types of US player, depending on the product

US firms, across bulge bracket banks, independent investment banks, and market makers, have continued to increase market share, with revenue market share increasing by 23pp to 72% from 2010–26E (Exhibit 72). However, across different capital markets products, share gains have accrued to different types of US firm. In trading, share has accrued to both US market makers and US bulge bracket banks, with Equities in particular consolidating among the top 3 players. Conversely, in investment banking, share has accrued to independent IBanks although recent market share gains have abated. Further detail on share trends across different capital markets products, and further information on trends in each product in subsequent sections:

- **Within total trading,** US market makers have gone from de minimis share in 2010 to 21% as of 2026E, and US bulge brackets have taken 2pp of share, with their share now at 50% of total (Exhibit 73).
 - **In Equities,** we have seen US bulge bracket firms take 23pp of share from 2010–26E and now stands at 69%, with the top 3 players benefiting disproportionately (adding 18pp of share gains to reach 52% – Exhibit 74, Exhibit 75). We attribute these structural share gains to the significant migration of ECM activity to the US, the retrenchment of a number of European and Asian capital markets firms, as well as the significant investments US firms have made in both prime and execution capabilities. Note that Equities trends exclude non bank market makers, given their disclosures lack granularity on different trading businesses.
 - **In FICC,** the US bulge brackets have taken a more modest 14pp of share from 2010–26E, although the top 3 have seen 9pp of share gains (Exhibit 76, Exhibit 77). Note that FICC trends exclude market makers, as well as certain banks, given their disclosures lack granularity on different trading businesses.
- **Finally, in investment banking,** independent IBanks have been notable share gainers, adding 17pp of share from 2010–26E, with their share rising to 25%. Unlike in trading, there has been little share gain by the top 3 players, who have added only ~15bps of share to 29% (Exhibit 78, Exhibit 79). The US IBanks' share gains has been driven by significant investment in talent, and the ability to pay more for senior bankers, as IBanks have significantly higher relative compensation to revenue ratios (vs. those of bulge brackets). As we discuss in the subsequent section, we believe share gains may have slowed for IBanks, given an increased financing component and more and more expensive competition for talent.

Exhibit 72: US market makers/bulge brackets/IBanks have gained 16pp/2pp/5pp of total capital revenue market share from 2010-26E

Exhibit 80: The US share of global ECM volumes has increased from 26% in 2016 to 47% in 2026 TD

Source: Dealogic, Goldman Sachs Global Investment Research

Independent investment bank share gains could slow going forward

From 2010–26E, independent investment banks have taken a meaningful 17pp of investment banking revenue market share, bringing their share to 25%, with share gains across Advisory and ECM, as well as modest gains in DCM, as the group has grown their MD bases at an 11% CAGR over the past decade ([Exhibit 78](#), [Exhibit 84](#)). We expect only 3pp of IBank share gains from 2026E–28E, as we believe share gains from here by IBanks could be more challenging to come by, especially in the M&A business, driven by a combination of: 1) a more competitive backdrop for talent, as more independent and bulge bracket banks compete for talent, driving higher compensation costs for bankers; and 2) IBanks' businesses are more fully built out, which reduces the attractiveness of leaving a bulge bracket platform and going to an independent firm, given fewer entrepreneurial opportunities to build new sectors out. Nearer-term, we have seen US bulge bracket share gains, as more M&A transactions across AI-related and adjacent businesses that are driving activity currently involve a financing component, which favors US bulge brackets, and given the fact that financial sponsor M&A, to which IBanks are more exposed, has seen less growth YoY, vs. strategic M&A. Indeed, in advisory, IBank market share has fallen 3pp YoY in 2026E, which we see related to the financing-related M&A outperformance. In ECM, we see share as somewhat cyclical, with IBanks' businesses narrowly exposed to healthcare, which have improved in 2026 so far. We do not expect material DCM market share gains going forward, given IBanks' smaller balance sheets limit their financing offerings. From 2010–26E, IBanks have taken: 21pp of M&A share, bringing share to 47%, 14pp of ECM share, bringing share to 21%, and 2pp of DCM share, bringing share to 5% ([Exhibit 81](#), [Exhibit 82](#), [Exhibit 83](#)).

- **Advisory share trends:** The competitive bid for investment banking talent has structurally mounted in recent years, driven both by more and larger IBanks competing for more talent to sustain growth, as well as the enhanced investment banking aspirations among bulge bracket banks (e.g., C and WFC). This has made hiring more competitive in absolute terms, which weighs on hiring, but also increased the cost of hiring. As a result, comp / MD in total across IBanks has risen by 22% from 2019–26E to \$6.5mn, as we note in [Exhibit 85](#), and IBanks' deferred comp / MD has increased by ~15% from 2020–2Q26 to \$1.3mn ([Exhibit 86](#)). Separately, in our view, IBanks' value proposition when hiring talent has become somewhat less compelling, given that they have broadened out their sector footprints, leaving less white space in which to expand. Specifically, there are fewer places to offer senior potential hires the opportunity to build out new sectors from scratch. We believe this entrepreneurial opportunity could be an important hiring perk, in certain cases. The top 3 sector contributions by deal volume for each IBank has fallen from 53% of total in 2019 to 46% in 2026 TD, demonstrating less pronounced sectoral skew ([Exhibit 88](#)). More recently, cyclical considerations have impacted M&A market share across US IBanks and bulge brackets. Specifically, the % of M&A transactions involving an equity or debt financing component has increased each of the past 5 years, reaching 27% of M&A transactions in 2026 TD ([Exhibit 89](#)). This compares to a 25% average from 2017–26 TD, and the % has risen each year since 2022, up from only 17% in 2022.

US bulge brackets, which offer broader financing capabilities than IBanks', given their business mix and balance sheets, have historically taken share when the % of M&A deals with a financing component increase. In 2021, 31% of M&A deals involved financing, up 3pp YoY, and US bulge brackets added 2pp of IB share - we believe the same trend is occurring in 2026. Finally, IBanks have become increasingly sponsor-skewed, and are more skewed to sponsors than the bulge bracket banks, with the % of their M&A over the past three years from sponsors at 47%, vs. 45% for US bulge brackets on average (Exhibit 90). With sponsor M&A growth notably underperforming strategic M&A growth, this has more recently favored bulge bracket banks (sponsor M&A has comprised 27% of YTD announced volumes, down 9pp vs. 2025 - Exhibit 57).

- **ECM share trends:** IBanks are heavily exposed to healthcare ECM, as this is one of the sectors that involves the least debt financing intensity. With their smaller balance sheets and more limited financing capabilities, this has allowed IBanks to compete well and take share in this sector more than others. IBanks' healthcare ECM has comprised ~45% of their volume over the past 3 years (Exhibit 91). As such, the cyclical nature of healthcare ECM will drive IBanks' ECM market share, in our view.
- **DCM share trends:** Only two covered IBanks (JEF and PIPR) offer DCM. The lack of DCM footprint across the group reflects the fact that the IBank model is typically a capital-light model. With many acquisition-related debt financings involving both a balance sheet and market-based component, IBanks' small balance sheet capacity to support financing activity limits their ability to participate in DCM.

Exhibit 81: US IBanks have gained 21pp of global advisory revenue market share from 2010-26E, while US bulge brackets' share remained stable, although these trends have reversed in 2026E YoY, and we expect IBank share gains to be more difficult to come by going forward...

Glossary

Capital Markets Businesses

- **Capital Markets:** The combined revenue pools from trading (FICC + Equities) and investment banking (M&A, ECM, DCM) through which companies, governments and investors raise capital and manage risk.
- **Trading:** The combined intermediation and financing revenue from **FICC** (Shorthand for Fixed Income, Currencies and Commodities – the trading business covering rates, credit, FX, and commodities products) and **Equities** businesses (The trading business covering equity intermediation (cash and derivatives trading) and equity financing (prime brokerage, securities lending).
 - **Intermediation:** Revenue earned from facilitating client purchases and sales of securities (i.e., market-making).
 - **Financing:** Revenue earned from lending balance sheet and providing leverage to clients to hold positions (e.g., prime brokerage, repo, NDFI lending).
- **IBanking (Investment Banking):** The advisory and underwriting business comprising three sub-products: M&A, ECM, and DCM.
 - M&A (Advisory): Fees earned advising companies on mergers, acquisitions, and divestitures.
 - ECM (Equity Capital Markets): Fees earned helping companies raise equity capital, including IPOs, follow-on offerings, and convertible issuances.
 - DCM (Debt Capital Markets): Fees earned helping companies and governments raise debt capital through bond issuance and loan syndication.

Market Participants

- **Bulge Bracket Banks:** The largest, full-service global investment banks offering the broadest range of capital markets and financing services.
- **Independent IBanks:** Shorthand for advisory-focused investment banks without large trading balance sheets, specializing in M&A and, in some cases, ECM advisory.
- **Market Makers (Non-Bank):** Trading firms that provide liquidity and execute trades without a traditional banking charter or balance sheet financing model.

Financial & Regulatory Metrics

- **ROE (Return on Equity):** A profitability measure calculated as net income divided by average equity (or allocated capital).
- **Efficiency Ratio:** A measure of cost discipline, calculated as non interest expenses divided by revenue
- **Leverage (Balance Sheet):** Defined as average segment assets divided by average segment equity.
- **SLR (Supplementary Leverage Ratio):** A regulatory capital ratio limiting a bank's leverage relative to total assets (including certain off-balance-sheet exposures), independent of risk weighting.
- **Revenue Yield / Fee Rate:** Revenue earned as a percentage of trading assets (yield, used for FICC/Equities) or as a percentage of transaction volume (fee rate, used for IBanking).

Others

- **Sponsor(s):** Shorthand for financial sponsors, i.e., private equity firms that acquire companies using pooled capital.
- **Strategics:** Shorthand for corporate acquirers (as opposed to financial sponsors) pursuing M&A for synergies, market expansion, or competitive positioning.
- **Hyperscaler CapEx:** Capital expenditure by large cloud/AI infrastructure companies (e.g., AWS, Microsoft, Google, Meta, Oracle).
- **Comp/MD (Compensation per Managing Director):** Average compensation cost per Managing Director, used as a proxy for the intensity of competition for senior banking talent.
- **VIX:** Shorthand for the CBOE Volatility Index, a widely used measure of expected S&P 500 volatility.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Distribution of ratings/investment banking relationships

Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	50%	34%	16%	65%	59%	43%

As of July 1, 2026, Goldman Sachs Global Investment Research had investment ratings on 3,104 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage universe and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; registered market maker. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the

specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at <https://www.gs.com/worldwide/brazil/area/gir/index.html>. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 10th Floor, Ascent-Worli, Sudam Kalu Ahire Marg, Worli, Mumbai-400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. Registration granted by SEBI and certification from NISM in no way guarantee performance of the intermediary or provide any assurance of returns to investors. Goldman Sachs (India) Securities Private Limited compliance officer and investor grievance contact details, a copy of the annual compliance audit report and other relevant information and disclosures can be found at this link: <https://www.goldmansachs.com/worldwide/india/research-analyst>. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at <https://www.gs.com/disclosures/europeanpolicy.html> which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, and Investment Management Association of Japan. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at <https://www.gs.com/research/hedge.html>.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances.

Early-Stage Biotech (ES). An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for

this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.

Global product; distributing entities

Goldman Sachs Global Investment Research produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom.

Goldman Sachs International ("GSI"), authorised by the Prudential Regulation Authority ("PRA") and regulated by the Financial Conduct Authority ("FCA") and the PRA, has approved this research in connection with its distribution in the United Kingdom.

European Economic Area: Goldman Sachs Bank Europe SE ("GSBE") is a credit institution incorporated in Germany and, within the Single Supervisory Mechanism, subject to direct prudential supervision by the European Central Bank and in other respects supervised by German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research within the European Economic Area.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (<https://www.sipc.org>).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage universe as described herein.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, make a market or act as liquidity provider in, and buy or sell, any securities, derivatives, or other financial instruments referred to in this research (including any financial instruments issued by the companies referred to herein), unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at <https://www.theocc.com/about/publications/character-risks.jsp> and https://www.goldmansachs.com/disclosures/cftc_fcm_disclosures. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an

example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to <https://research.gs.com>.

Disclosure information is also available at <https://www.gs.com/research/hedge.html> or from Research Compliance, 200 West Street, New York, NY 10282.
