This monthly publication tracks Quant factor performance across the nine MSCI-based universes below.

September brought a renewed Momentum rebound, led by AI & semi names. Price led across regions and Earnings improved, but the move remained narrow, with factor leadership still out of sync across regions. Market attention shifted from AI worries to central banks. The U.S. and Japan delivered expected rate hikes, but hawkish messaging pushed markets to price in more tightening. The U.S. 30-year yield broke above 5.5%, while Japan's 10-year JGB yield rose above 3.0%. MSCI ACWI fell -0.8% m/m, reflecting more caution toward risk.

Asia ex-Japan was led by Price (+3.8%), helped by renewed buying in AI Momentum names. Yet Quality fell -3.1% and Earnings slipped -0.5%. The rebound looked theme-driven rather than broad-based. With QMI moving unsteadily, caution remains warranted. **Japan** also saw Price lead (+4.0%), while Earnings added +1.3%. Valuation fell -1.2% and Quality declined -2.0%. Unlike August, higher rates did not revive Value leadership; investors favored price trends and earnings support despite a hawkish BoJ and higher JGB yields.

In **Europe**, Price (+5.8%) and Earnings (+2.6%) lifted the Model +1.7%, while Valuation (-2.4%) lagged and Quality was flat (-0.3%). With QMI still in "Contraction," we stay defensive; overweight Quality/Low Volatility and underweight High Risk. In the **U.S.**, Price surged +13.4% and Earnings rose +7.8%. Valuation (-4.1%) and Quality (-3.7%) lagged, so despite weak Quality, Quality/Growth remains our core U.S. exposure.

Globally, our Q-Score model delivered a +3.6% long-short gain. Momentum (Price +7.1%) and Earnings (Growth +3.1%) added, while Quality (-1.5%) and Valuation (-1.1%) dragged. Dispersion stayed wide: the U.S. (+4.4%) and Europe (+1.7%) led, while Asia ex-Japan and Japan both fell -0.3%. Overall, September was an AI-led Momentum rebound set against rising caution from hawkish central banks and multi-decade-high yields.

Style L/S Returns for September 2026

Universe	Valuation	Earnings	Price	Quality	Model

Introduction

This report, published monthly, summarizes factor returns for a range of popular quant factors in a range of global universes.

All factors are normalized relative to country or sector as appropriate. Returns are equal weighted and rebalanced monthly. Long portfolios consist of the top 10% (decile 1) of stocks for the relevant Factor, with short portfolios consisting of the bottom 10% (decile 10).

The universes included are shown in the table below. Factor definitions can be found at the end of this report.

Universes Included

Universe	Normalisation Method	Analysis Style
Asia Ex Jp	Country Neutral	Decile
Japan	Sector Neutral	Decile
Australia	Free	Quintile
Europe	Sector Neutral	Decile
US	Sector Neutral	Decile
GEM	Country Neutral	Decile
EM x Asia	Country Neutral	Decile
GDM	Sector Neutral	Decile
World	Country Neutral	Decile

Composite Performance Summary

For each universe, we include a summary of performance over the last month, 12 months, YTD, and QTD for four popular composite alpha sources we refer to as Value, Earnings, Quality, and Price families. We also include performance information for a simple combination of these family factors (see factor definitions for more information).

Factor Performance Summary

We also include a table detailing performance over the last month for 42 popular alpha and risk factors. For each factor we provide returns data as well as the monthly Information Coefficient (IC) calculated by correlating start-of-month scores with subsequent returns. This provides a more robust picture of factor efficacy than returns alone, given that it is possible for returns to be distorted by outliers.

Factors are shown in two tables. One is sorted by L/S return over the month and one by factor family.

Factor Summary Chart

For a quick visual reference, the same 42 factors are charted for each universe. The chart shows monthly L/S returns and average monthly L/S returns over the last year.

For more information on this product or for any custom back-test requests, please contact Quant Strategy (quant_strategy@jpmorgan.com).

Appendix

Factor Definitions

VALUATION FACTORS	
Historical Book/Market Ratio	This factor ranks stocks based on month-end market cap and most recent published 12-month trailing Historical Book Value. Source: MSCI
Historical P/Cash Earnings Ratio	Stocks are ranked by their P/Cash Earnings Ratio. The difference between earnings and cash earnings is that depreciation on fixed assets is added to earnings to arrive at cash earnings. Cash earnings also include amortization when it is not separately reported on the accounts. Source: MSCI
Cash Flow Yield	Forecast Cash Flow for both FY1 and FY2 is combined and then stocks are ranked such that those stocks with the highest Cash Flow yield are allocated to quintile 1.
Historical Earnings Yield	Stocks are ranked by their P/Historical Earnings Ratio. Those stocks with the lowest ratio are allocated to quintile 1 and those with the highest to quintile 5. Historical earnings are updated quarterly, semi-annually, or annually depending on the country. Source: MSCI
1 Year Forward PE	A pro-rata of consensus analyst FY1 and FY2 forecasts is used to create a 12-month forward earnings estimate number. Stocks are ranked such that those with the lowest ratio are allocated to quintile 1 and those with the highest to quintile 5.
1 Year Forward PE Relative to History	Stocks are ranked by their current forecast P/E ratio relative to their historical 3-year average P/E. Those stocks that are "cheapest" relative to their history are allocated to quintile 1 and those that are most expensive to quintile 5.
1 Year Forward PE Relative to Sector	Stocks are ranked based on their own forecast P/E relative to the P/E of their sector. This alleviates the inherent sector bias from the factor with those stocks that are cheapest relative to their sector being allocated to quintile 1 and those which are most expensive to quintile 5.
Historical P/Sales Ratio	Stocks are ranked by their P/Historical Sales Ratio such that those stocks generating the largest amount of sales per share are allocated to quintile 1. Source: MSCI
Historical Dividend Yield	Stocks are ranked by their current 12-month trailing dividend yield such that the largest dividend payers are allocated to quintile 1 and the smallest dividend payers to quintile 5. Source: MSCI
SENTIMENT FACTORS	
Recommendation	The consensus recommendations for all stocks are ranked from strong buy to strong sell. Those stocks with the best recommendations are allocated to quintile 1 and those with the worst recommendation to quintile 5. Previous work by JPM Quant suggests that this factor is more potent in developing markets and tends to be a poor performer in developed markets such as Australia, the US and Japan.
1 Mth Change in Recom	Stocks are ranked by their change in consensus recommendation over the last month. Those with the biggest improvement are allocated to quintile 1 (regardless of whether they have moved from Strong Sell to Sell or Buy to Strong Buy, etc.) and those with the biggest decline are allocated to quintile 5. Change in recommendation appears to be more useful than absolute level in many of the developed markets analyzed but suffers from significantly larger turnover.
3 Mth Change in Recom	Stocks are ranked by their change in consensus recommendation over the last 3 months. Those with the biggest improvement are allocated to quintile 1 (regardless of whether they have moved from Strong Sell to Sell or Buy to Strong Buy, etc.) and those with the biggest decline are allocated to quintile 5. Change in recommendation appears to be more useful than absolute level in many of the developed markets analyzed but suffers from significantly larger turnover.
PRICE FACTORS	
12 Mth Price Momentum	The 12 Mth Price Momentum factor is calculated by ranking stocks by their total return over the previous 12 months. Momentum is a powerful factor observable in many markets. Source: MSCI
Volatility Adjusted Price Momentum	12-month price momentum divided by the volatility of monthly returns over the prior 12 months. This factor looks to reward stocks delivering consistent momentum. Source: MSCI
1 Mth Price Momentum	The 1 Mth Price Momentum factor is calculated by ranking stocks by their total return over the previous month. It is often employed "in reverse" on account of the reversion that is observable in many markets and sectors. (Last month's winners become this month's losers and vice-versa.) Source: MSCI
3 Mth Price Momentum	The 3 Mth Price Momentum factor is calculated by ranking stocks by their total return over the previous 3 months. Momentum is a powerful factor observable in many markets. Source: MSCI
6 Mth Price Momentum	The 6 Mth Price Momentum factor is calculated by ranking stocks by their total return over the previous 6 months. Momentum is a powerful factor observable in many markets. Source: MSCI
Percent Off 52 Week High	This factor ranks stocks by their Percent Off 52 Week High descending such that those stocks at or close to their highs are allocated to quintile 1 and those stocks furthest from their highs are allocated to quintile 5. This factor has a strong correlation with momentum.

VALUATION FACTORS	
6 Mth Price Acceleration	To calculate the 6 Mth Price Acceleration, we perform a regression on a year of daily prices to calculate the gradient of the trend (adjusted for volatility). We do the same thing "as of" 6 months ago and look at the change in the gradient to provide us with a measure of price acceleration. Stocks are ranked such that those stocks that have accelerated the most are awarded the highest scores.
3 Mth Price Acceleration	To calculate the 3 Mth Price Acceleration, we perform a regression on a year of daily prices to calculate the gradient of the trend (adjusted for volatility). We do the same thing "as of" 3 months ago and look at the change in the gradient to provide us with a measure of price acceleration. Stocks are ranked such that those stocks that have accelerated the most are awarded the highest scores.
10 Day Relative Strength	A popular trader's tool, the Relative Strength Indicator is used to highlight stocks as overbought or oversold. Generally, an RSI of 80 or higher indicates an overbought stock and an RSI of sub 20 indicates an oversold stock. We calculate the RSI over both 2 weeks (10 trading days) and also over one month.
30 Day Relative Strength	As above but based on a 30-day window.
60 Day Volatility	We rank stocks according to their 60-day Volatility. The most volatile stocks are added to the long portfolio.
EARNINGS FACTORS	
Risk-Adjusted Earnings Momentum	To adjust for any risk associated with a stock's earnings revisions the earnings revision number is normalized by the coefficient of variation. This serves to penalize stocks with high earnings risk and reward stocks with high earnings certainty. This is arguably a cleaner measurement of earnings revisions.
Forecast Earnings Growth	Using consensus forecasts for FY1 and FY2 we calculate the forecast growth and we then use this to rank our universe. Analysts are notoriously over-optimistic with growth forecasts, and this is reflected in the poor performance of this factor in most test universes.
Earnings Momentum (1Mth Change)	This factor ranks stocks by their 1-month forward earnings momentum. For each stock we calculate the change in FY1 earnings over the last month and the change in FY2 earnings over the last month. We calculate the one-month revision number by taking the average of the change in FY1 and FY2.
Earnings Momentum (3Mth Change)	This factor ranks stocks by their 3-month forward earnings momentum. For each stock we calculate the change in FY1 earnings over the last 3 months and the change in FY2 earnings over the last 3 months. We calculate the 3-month revision number by taking the average of the change in FY1 and FY2.
Earnings Momentum	This factor ranks stocks by their composite forward earnings momentum (1Mth + 3Mth). For each stock we calculate the change in FY1 earnings over the last month and the last 3 months and the change in FY2 earnings over the last month and the last 3 months. We calculate both a 3-month revision number and a 1-month revision number by taking the average of the change in FY1 and FY2 and then finally we calculate a composite value as the average of the 1-month and 3-month values.
5 Yr Historical Earnings Growth	Companies are ranked by their average annualized EPS growth over the past 5 years. Those companies with the highest average growth are allocated to quintile 1 and those with the lowest average growth are allocated to quintile 5.
Net Revisions to FY1	A broad-brush approach to earnings revisions that is arguably more suited to markets with questionable data quality. We calculate a FY1 Net Revision by looking at all analyst revisions in the last 4 weeks and calculating the number of upward revisions less the number of downward revisions expressed as a percentage of the total number of revisions made.
Net Revisions to FY2	A broad-brush approach to earnings revisions that is arguably more suited to markets with questionable data quality. We calculate a FY2 Net Revision by looking at all analyst revisions in the last 4 weeks and calculating the number of upward revisions less the number of downward revisions expressed as a percentage of the total number of revisions made.
QUALITY FACTORS	
Earnings Risk (also known as EPS Co-Eff of Variation)	We rank stocks by the average of FY1 and FY2 Coefficient of Variation. We use the coefficient of variation as a proxy for earnings risk with those stocks with the largest spread in earnings being considered most "risky." We find that the stocks with the smaller coefficient of variation (and hence the most earnings certainty) tend to outperform their riskier peers.
Coverage	We rank stocks by Number of Consensus Estimates (FY1), which we use to indicate the number of covering analysts. Quintile 1 is formed from the most readily covered stocks and Quintile 5 is formed from the least covered stocks. This factor is often regarded as a proxy for information uncertainty rather than an Alpha or Risk Factor, and previous research by JPM Quant in the Australian market supports this thesis.
Historical Return on Equity	Stocks are ranked on their historical return on equity (ROE) with those stocks with the largest ROE being allocated to quintile 1 and those with the poorest ROE being allocated to quintile 5. To eliminate any forward-looking bias, the ROE figure is only updated on the date that the numbers became available to the market. Source: MSCI
ROE Growth	To calculate the change In ROE we look to compare a stock's ROE with its ROE 12 months prior at each point in time. Those stocks that have seen the biggest increase in ROE are allocated to quintile 1 and those that have seen the biggest decline in ROE are allocated to quintile 5. Source: MSCI
Return On Assets	Stocks are ranked on their Return on Assets (ROA) with those stocks with the largest ROA being allocated to quintile 1 and those with the poorest ROA being allocated to quintile 5. Source: MSCI
RISK FACTORS	
BETA	Beta for the stock relative to its local benchmark index. Note this is a **fundamental** beta not a calculated Beta.

COMPOSITE FAMILY FACTORS	
Earnings & Sentiment	Combines three flavors of momentum measure. Risk-adjusted 3-mth EPS momentum, FY2 Net revisions, and Recommendation one-month change are all normalized and combined equally to form the composite.
Valuation	PE + PE Relative to Sector + Forecast Growth
Price	Equally combines a normalized 12-month price momentum factor (75%) with a 1-month price reversion factor (25%).
Quality	Combines ROE and Earnings Risk (inverted such that stocks with tightest forecasts are rewarded with a higher score).
Composite Q-Score Model	A multi-factor combination of Valuation, Earnings & Sentiment, Quality, and Price composite factors.

The JPM Q-Score – A Composite Approach

The JPM Q-Score model is designed to act as a "catch-all" generic quant model suitable for use in many markets. The factors used in our Q-Score have been selected as they are 10 of the most popular quant factors "in general use." That said, they are popular for a reason having been widely researched by many practitioners (ourselves included) and historically have been found to be some of the strongest and most consistent "alpha generators" in the quant analysts' stock selection armory.

Figure 4: The Quant Return Drivers – Ranking process

Valuations: P/E Vs Market (12mth fwd EPS)	Compares stock P/E to country P/E. The cheapest stock (lowest P/E allocated a score of 100%. The most expensive stock is allocated a score of 0%. (Loss makers are scored below high P/E stocks)
Valuations: P/E Vs Sector (12mth fwd EPS)	Compares stock P/E to country sector P/E. The cheapest stock (lowest P/E allocated a score of 100%. The most expensive stock is allocated a score of 0%. (Loss makers are scored below high P/E stocks)
Valuations: EPS Growth (forecast)	Ranks stocks based on their forecast growth from EPS mean FY1 to EPS mean FY2. The stock with the highest forecast growth receives 100% whilst the stock with the lowest forecast growth is allocated a score of 0%.
Momentum: 12 Month Price Momentum	Ranks stocks based on their total return over the last year. The stock with the highest total return receives 100% whilst the stock with the lowest total return is allocated a score of 0%.
Momentum: 1 Month Price Reversion	Ranks stocks based on their total return over the last month. The stock with the LOWEST total return receives 100% whilst the stock with the HIGHEST total return is allocated a score of 0%.
Quality: Return On Equity (forecast)	Ranks stocks based on their Earnings Risk which is proxied by examining the spread in analyst EPS forecasts (aka the co-efficient of variation). the stocks with the LOWEST spread receives a score of 100% whilst the stock with the highest spread and hence the most earnings risk is allocatoed score of 0%
Quality: Earnings Risk (Variation in Consensus)	Ranks stocks based on their Return on Equity. The stock with the highest return on equity receives a score of 100% whilst the stock with the lowest return on equity is allocated a score of 0%
Earnings&Sentiment: Earnings Momentum 3mth	Ranks stocks based on their Earnings Momentum. Earnings momentum is calclated as the average of the change in FY1 and FY2 mean EPS measured of 3 months and adjusted for risk by dividing by the spread in analyst forecasts.The stock with the highest risk adjusted earnings momentum receives a score of 100% whilst
Earnings&Sentiment: Change in Recomms	Recommendations are mapped onto a scale from 1 (best) to 5 (worst). The change in the mean reccomendation over the last 4 weeks is then used to rank the stocks. The stock with the biggest recommendation upgrade is allocated a score of 100% whilst the most downgraded stock is allocated a score of
Earnings&Sentiment: Net Revisions Fy2 EPS	Ranks stocks based on the net analyst revisions to FY2 EPS over the last 4 weeks. Net revisions is calculated as (upgrades-downgrades)/(Upgrdaes+Downgrades). The stock with the highest net revision ratio receives 100% whilst the stock with the lowest net revision ratio is allocated a score of 0%

What are we capturing with these factors?

These 10 factors can broadly be divided into four key categories (or factor families) to which we believe a portion of the stock's subsequent return can be attributed.

There is extensive literature available on each of these categories, and we have ourselves explored many of these effects over the last 10 or so years. Clearly this is not the correct forum for going into great detail, and instead a (very) brief summary follows:

VALUATION: Many quant researchers have explored the "Value Anomaly," and it is widely recognized that low P/E stocks outperform high P/E stocks over the long term. Similar analysis has shown consistent results using P/Sales, P/Dividend, and P/Book ratios. Our studies have also shown that Earnings Growth can complement straight Value factors in many markets.

MOMENTUM: Momentum theory for stock prices suggests that companies that do well in one (long-term) investment period will continue to do well in the subsequent investment horizon. Over short time frames (<1 month) studies have also highlighted the tendency of stocks to overreact, leading to short-term reversion. We have widely observed these phenomena in our own testing.

EARNINGS & SENTIMENT: We believe that the market is not efficient at incorporating new information, and a window of opportunity exists to exploit recent analyst revisions in earnings and recommendations. Similarly, analyst behavioral biases lead to subsequent changes suggesting an exploitable serial correlation in earnings upgrades/downgrades.

QUALITY: While arguably less readily observable than some other factors (especially in more emerging markets), it is generally accepted that it is desirable to tilt portfolios toward highly profitable and good-quality businesses. Similarly, over the long term the market also appears to reward relative "earnings certainty" and penalize those stocks that carry a large degree of earnings risk.

Generating the Q-Score

Given we have now quantified each stock's exposure to what we believe are four of the key drivers of return the next step is to combine these scores into an overall metric that can be considered indicative of the stock's expected return. We call this the Q-Score, and we use a standard quantitative approach to combining the individual factor scores. This involves normalizing our data and establishing the factor premiums (or weights) that we are going to allocate to each of the drivers. We have a number of techniques that we use to help us establish the factor premiums, though we would urge "budding quant analysts" not to fall into the trap of thinking that this is by any means an exact science.

In the case of our Q-Score we are not trying to build a quant process per se and are instead looking to provide the market with a general indication of likely outperformance on a per stock basis. For that reason, we have kept things relatively simple. We have used the same factor premiums across all markets and have not tailored the Q-Score to any particular investment style. Rather, we have looked to provide a "Generic Alpha score" that can be used across a global spectrum.

In the table below we show the factor premiums that have been applied to the 10 input factors to generate the overall Q-Score. Note that due to limits in data availability we have applied some additional rules to our process. In particular, no Q-Score is allocated to a company that does not have an exposure to our key factor families of Value and Earnings. A stock may be missing either a Quality exposure or a Momentum exposure (but not missing both) and still be allocated a Q-Score. When considering the individual drivers a minimum of 50% of the drivers must be available for a family score to be calculated with some factors being mandatory members of the family. The mandatory items are shown in the table as **bold**.

Converting the Quant Return Drivers into the Q-Score

VALUATION *[30%]*	EARNINGS & SENTIMENT *[30%]*
	COMPONENT FACTORS
COMPONENT FACTORS	**Earnings Momentum 3mth (Risk Adj.) *[34%]***
P/E vs Market (12mth fwd EPS) *[34%]*	1mth change in consensus recomms *[33%]*
P/E vs Country Sector (12mth fwd EPS) *[33%]*	Net Revisions to mean FY2 EPS *[33%]*
EPS Growth (FY1 mean to FY2 mean) *[33%]*	
MOMENTUM *[20%]*	**QUALITY *[20%]***
COMPONENT FACTORS	**COMPONENT FACTORS**
12Mth Price Momentum *[75%]*	ROE (average of FY1 & FY2 forecast) *[50%]*
1Mth Price Reversion *[25%]*	Earnings Risk (Variation in forecast EPS) *[50%]*

Source: J.P. Morgan Global Quantitative Strategy

The J.P. Morgan Q-Score composite quant factor is generally the starting point we use in most of our research and the benchmark that we look to "beat" through the introduction of new ideas.

J.P.Morgan

Analyst Certification: The Research Analyst(s) denoted by an "AC" on the cover of this report certifies (or, where multiple Research Analysts are primarily responsible for this report, the Research Analyst denoted by an "AC" on the cover or within the document individually certifies, with respect to each security or issuer that the Research Analyst covers in this research) that: (1) all of the views expressed in this report accurately reflect the Research Analyst's personal views about any and all of the subject securities or issuers; and (2) no part of any of the Research Analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the Research Analyst(s) in this report. For all Korea-based Research Analysts listed on the front cover, if applicable, they also certify, as per KOFIA requirements, that the Research Analyst's analysis was made in good faith and that the views reflect the Research Analyst's own opinion, without undue influence or intervention.

All authors named within this report are Research Analysts who produce independent research unless otherwise specified. In Europe, Sector Specialists (Sales and Trading) may be shown on this report as contacts but are not authors of the report or part of the Research Department.

Important Disclosures

Company-Specific Disclosures: J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Important disclosures, including price charts and credit opinion history tables (if applicable), are available for compendium reports and all J.P. Morgan–covered companies, and certain non-covered companies, by visiting https://www.jpmm.com/research/disclosures, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, https://www.jpmorganmarkets.com.

J.P. Morgan Equity Research Ratings Distribution, as of October 03, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	35%	12%
IB clients**	83%	81%	72%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	93%	88%

***Please note that the percentages may not add to 100% because of rounding.**
****Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.**
For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, http://www.jpmorganmarkets.com. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:
A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of http://www.jpmorganmarkets.com where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to UK MIFID Research Unbundling exemption for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.
