Component Data Deposition: METI production statistics (electronic components, semiconductors) for July 2026: ABF substrates remain buoyant, Si-MOSFETs also strong

METI released July 2026 production statistics on September 14. In July, domestic production value (USD basis) for electronic components was slightly below seasonality but remained solid. Semiconductor production results were mixed, with some product categories exceeding seasonal trends and others falling short of them. In electronic components, MLCC production value remained roughly flat based on METI statistics, suggesting a continued divergence from MLCC export value based on Ministry of Finance (MoF) trade statistics. However, we see no need to be overly concerned at this time as MoF data confirmed exports continue to trend upward. Among passive components, the recovery trend for aluminum electrolytic capacitors continued, and production of connectors appears to have improved slightly. Production of rigid module substrates (including ABF substrate/FC-BGA) continued to grow strongly; this looks positive for Ibiden. Four companies—Ibiden, TDK, and Rohm along with one MLCC name, either Murata Manufacturing or Taiyo Yuden—remain our top picks in the electronic components sector.

- **Our view:** Although electronic components domestic production value was slightly below seasonality in July, the overall result was solid. MLCCs remain on recovery trend in terms of volume, but production value is almost flat (USD basis) and there is still little sense of a clear recovery based on METI statistics. However, there is a significant divergence from MoF trade statistics, and we place greater emphasis on the trade data. Rigid module substrate (including ABF substrates/FC-BGA) production value remains on an upward trend. In semiconductors, results versus seasonality vary depending on the product category. Among discrete devices, production value (USD basis) is weak for diodes, silicon transistors, and IGBTs but notably strong for Si-MOSFET. Si-MOSFET production is rising gradually, although the trend line fluctuates on a month-to-month basis. Memory growth YoY remains very high, both in terms of production value and average unit price.
- **Electronic components:** In July 2026, domestic production value for electronic components (USD basis) was as follows: passive components -9% YoY and +4% MoM, mechanical components -2% and -1%, electronic substrates +19% and +6%, and electronic circuit mounting boards +9% and +1%. Overall domestic production value (USD basis) was firm in July, although it was slightly below seasonality. Passive components were slightly below seasonality, and the trend line remained stagnant. MLCC production volume increased, but production value (USD basis) was about in line with seasonality, and the trend line appears to remain flat. Aluminum electrolytic capacitors were roughly in line with the seasonal trend in July; production value continues to recover gradually. Inductors remained about flat, with no notable changes. On the other hand, overall production of resistors and crystal devices remained on a gradual recovery trend. Although connector production value (USD basis) was below seasonality, it appears to be gradually improving. Electronic substrates continue to grow, and rigid module substrates (including ABF substrates and FC-BGA) continue to grow strongly.

- **Semiconductors:** Domestic production value growth YoY in July 2026 (USD basis) was as follows: discrete semiconductors -15% YoY and -1% MoM, MCUs -27% and -1%, logic ICs +3% and +4%, and memory +408% and +16%. In July, the direction of momentum versus seasonality seemed to vary depending on the product category. Production of discrete semiconductors was about in line with seasonality overall, with production of Si-MOSFETs significantly higher and production of other products lower. Logic ICs were above seasonality, while MCUs were slightly lower. Memory production value (USD basis) kept growing strongly, climbing 408% YoY and 16% MoM. The average unit price (USD basis) for memory increased 404% YoY and 2% MoM in July 2026.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, <https://www.jpmorganmarkets.com>.

J.P. Morgan Equity Research Ratings Distribution, as of July 04, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	36%	12%
IB clients**	83%	80%	73%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	92%	87%

*Please note that the percentages may not add to 100% because of rounding.

**Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.

For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.
