

Global Nuclear

Postcard from the 2026 WNA Symposium: converting big ambition to bold action

Industry Overview

BofA remains constructive on nuclear energy

We recently attended the 2026 edition of the annual World Nuclear Association (WNA) Symposium. Attendance was a record, up 17% vs. last year. Key idea: while the nuclear skepticism of the 2010s has yielded to ambitious plans for deployment, supported by decarbonization, energy security, and national security goals, the industry must now take bold action. In our assessment, policy makers, end users, power providers, and fuel cycle players are moving in the right direction. We remain constructive on nuclear energy and point to the following buy-rated US-listed stocks for exposure: CEG, TLN, VST in power, CCJ and OKLO among vendors, and CCJ and STDN in the nuclear fuel cycle.

Ambitious goal to more than triple global nuclear power

At COP28 in December 2023, WNA set a goal to triple global nuclear capacity from the 2020 baseline of just under 400 (392) gigawatts electric (GWe) to nearly 1,200GWe in 2050 (a nearly 4% annual growth rate). Based on current global aggregate targets, global nuclear power generating capacity would reach 1,457 GWe by 2050, a near quadrupling.

Policy, technical standards, finance, are keys to success

Panelists broadly viewed supportive policy, technical standardization, and effective financial structures as key to growing global nuclear capacity. Policy should be supportive and incorporate industry input; and many improvements have been made in this direction, notably in the US and Japan. Standardization on technical specifications are seen aiding repeatability, to optimize execution. Reliable costing and timelines are seen as critical to making nuclear a widely investible asset class.

End users of power stepping up to support the build out

Having identified the decarbonization and energy security strengths of nuclear, end users are stepping up to support deployment. Amazon is providing financial and advisory support to nuclear reactor start-up X-Energy. Datacenter provider, Equinix is supporting nuclear developers Oklo, Radiant, and others with purchase agreements; as examples.

Path to 10 large reactor builds in the US by 2030

In May 2025, a US Executive Order called for 10 large reactors under construction in the US by 2030. The AP1000 is viewed widely by industry participants as a likely reactor candidate. The Department of Energy later announced a \$17.5 billion loan program for long-lead procurement for five, 2-reactor sites, with letters of intent signed with seven unnamed counterparties. Some attendees expressed optimism for 1-2 site-announcements, by the US mid-terms.

Upstream is the critical fuel cycle bottleneck

In order to triple nuclear, fuel production must also triple. Cameco CEO, Tim Gitzel reminded attendees that uranium mining is the bottleneck, as deposits are non-reproducible and lead times from discovery to production range up to 20 years; while fuel conversion, enrichment and fabrication can be more easily addressed (with capital alone). Early investment in uranium mining was viewed as key to nuclear growth ambitions.

Key highlights from WNA

Below, we set-out highlights from certain key presentations and fireside chats at the 2026 edition of the WNA annual symposium. These presentations were comprised of several panelists (details of which we give for each) and were attended by various investors/companies.

Set for success

Panelists

Moderator - Dr Sama Bilbao y León, Director General, World Nuclear Association

Bernard Fontana, Chairman and Chief Executive Officer, EDF

Nicole Holmes, Chief Commercial Officer, GE Vernova Hitachi

Nicolas Maes, Chief Executive Officer, Orano

Dr Lou Martinez Sancho, Chief Technology Officer, Westinghouse

Topic: Key for nuclear build-out success globally?

- Policy, financing, end-customer support
- must create ways to make nuclear build-outs repeatable.
- A few years ago the question was whether there was sufficient investment money to do this. Now there is.
- Nuclear needs to become a mainstream infrastructure asset class.

Topic: The state of Orano

- Mongolian agreement had 79% support from Parliament
- French Nuclear: Team France is at its best at the moment
- Orano, EDF and Framatome all share the same vision to grow nuclear
- The Geroe Besse enrichment facility expansion will start in 2028, on time.
- The key to successful deployment of new nuclear fuel capacity is copy/paste. This is their philosophy
- Redesigned the spent fuel casks: now 10 months from order to delivery vs. much longer previously

Topic: How to move faster and farther?

- GE Vernova: OPG looks at Darlington as a site with repeatability
- First BWRX must be built very well, then will work on repeatability
- Key is having the LARGE book of business

Topic: What is still needed in order to deploy nuclear more quickly

- EDF: the industry just needs to start executing
- GE Vernova: keep doing what we are doing; executing, and attracting talent via signals that this is not a passing trend

- Orano: keep safety top of the agenda. But a rational approach.

From ambition to megawatts

Delivering Nuclear at Fleet Scale

Panelists

Ma Yuanhua, President, State Nuclear Power Technology Corporation (of China)

How does China deliver so much nuclear power?

- Standardization key to delivering aggressive fleet deployment goals

WNA report showed world nuclear could reach 3.5x the current generating capacity.

- The commitment is clear. The question is delivery.
- China is targeting 110 GW by 2030, 150GW by 2035
- 4 challenges:
 - Design, management, talent. Supply chains
- Solution in China:
 - Standardization, specialization, centralization
 - This must be done across all key areas, including: Safety, Engineering, Procurement, Construction, Commissioning. Talent
- Supply chain key
 - Procurement is centralized.
- Construction timeline target = 56 months. Keys to achieving this are:
 - Modular construction
 - AI and digital support tools
 - A centralized organization that oversees project management
- Cooperations initiatives focus on
 - Technical standards
 - Supply chain
 - Smart construction
 - Talent development

The multi-dimensional nuclear build-out

Running Restarts, LTO, New Build and SMRs in Parallel

Panelists

**Moderator - Johan Svenningsson, Chair of the Board, World Nuclear Association;
Country Chairman and Chief Executive Officer, Uniper, Uniper Sweden**

**Bohdan Zronek, Member of the Board of Directors and Chief Nuclear Officer,
ČEZ Group**

Boris Schucht, Chief Executive Officer, Urenco

Boris Schucht, Chief Executive Officer, Urenco

**Wojciech Wrochna, Secretary of State, Ministry of Energy and Government
Plenipotentiary for Strategic Energy Infrastructure**

Czech Republic's use of nuclear

- Has started construction of two new large units
- Looking at building a Rolls Royce small modular reactor (SMR)
- Chose rolls Royce as an SMR partner as its true partnership;

Urenco:

- One event changed the fuel cycle: Russian invasion of Ukraine
- Has accelerated demand for Urenco's products
- Now Uruenco is ramping-up capacity across the fuel cycle
- Will build 4.6m SWU of new capacity, a nearly 1/3rd in its total capacity -> started in 2023, with US expansion that is already on line
- EUR 8.7 billion order book in 2021, now its EUR 21.3 billion
- Demand in next 10 years is far way from tripling
- But beyond the next 10 years, the industry is trying to figure out if its
 - Growth
 - Hig growth
 - Very high growth
- Already producing LEU+ and is building a HALEU plant
- This was based on a market assessment, not orders -> much more difficult but necessary
- US policy is providing more guidance, the EU is not
- Four plants in four countries thus lots of flexibility
- Demand is well spread over all four sites
- No missed deliveries in 40 years

Poland

- 3 AP1000s now in preparation stages before construction
- Ontario Power Generation (OPG) / Polish partnership
- Poland happy with the many global projects they can use as examples for their build-out, but nuclear is difficult and thus, Poland does want to move too fast and create issues.
- This is where partnerships can be very helpful -> cooperation is very important
 - OPG's Darlington is getting the first SMR
 - Canada has experience with supply chains

Singapore:

- Electricity and eggs have not increased in price in the past 20 years in Singapore. Adding nuclear can help in keeping electricity prices low while decarbonizing
- Committed to a net zero target by 2050
- Nuclear can help with energy independence
- Grid = 95% natural gas, thus very reliant
- Nuclear can help diversify
 - AI boom is driving desire for power
 - Thinks SMR's might be ideal as smaller upfront capex commitment

TEPCO's nuclear now & future

Panelist

Toshihiko Fukuda, Director, Executive Vice President, General Manager of Nuclear Power & Plant Siting Division, TEPCO

Japan has changed its policies and attitudes toward nuclear

- as a result, TEPCO is restarting unit 6 at Kashiwazaki-Kariwa

TEPCO's resolution

- Keep the Fukushima Nuclear Accident first in mind, while building for the future

TEPCO's nuclear assets include:

- Four sites, with 8 units
- Also two sites under construction now suspended
- 15 years since Fukushima Nuclear Accident

Kashiwazaki-Kariwa nuclear power plant

- Restart process underway for unit 6
 - February 9, 2026 restart, after 14 years closed

- Now ramping-up
- Designed to withstand aircraft impact in addition to tsunamis

Japans strategic energy plan (February 2025)

- Changed policy from reducing nuclear to Maximizing nuclear
- 20% of total electricity in Japan from nuclear by 2040
- June 2026 Must replace 11-14 reactors by 2050
- TEPCO's response?
 - Increased utilization rates

Fireside chat with CEO of Cameco (CCJ)

Panelists

Tim Gitzel, Chief Executive Officer, Cameco

Dr Sama Bilbao y León, Director General, World Nuclear Association

With respect to the need for action on nuclear deployment, Gitzel stated:

- “We don’t need to sell the [nuclear] story anymore, we just need to convert it to action.”

An issue that Gitzel sees in the reactor build side of CCJ’s business (via its 49% interest in Westinghouse Electric), is that few would likely want to be the first in the West to build new large scale reactors.

- “Everyone racing for bronze”; most want to go third as worried about the potential consequences of being first

Tim Gitzel reminded attendees that uranium mining is the bottleneck:

- as deposits are non-reproduceable, and lead times from discovery to production range up to 20 years;
- while fuel conversion, enrichment, and fabrication can be more easily addressed (with capital alone).
- Early investment in uranium mining was seen key to nuclear growth ambitions.

Ensuring and expanding the fuel cycle

Panelists

Moderator - Dr Kaajal Desai, Senior Programme Lead, Fuel Cycle, World Nuclear Association

Chris Frankland, Director of Sales and Marketing, Nuclear Fuels Corporation, General Atomics

Scott Moe, Premier of Saskatchewan, Government of Saskatchewan

Toru Matsuda, General Manager, Nuclear Fuel Contracts, The Kansai Electric Power Co., Inc.

Dastan Kosherbayev, Chief Strategy and International Development Officer, NAC Kazatomprom JSC

View of Saskatchewan's, Premier Moe on drivers for his provinces desire to build new nuclear:

- Sustainability and cleaner energy forms
- Growing need for electricity from more people, more affluence, industrial growth
 - COP 28 in Dubai where dozens of countries committed to nuclear
- Existing endowment of nuclear fuel

Kazatomprom view on the state of the uranium mining business

- “Not negligence” but there were years of de-prioritizing uranium mining, “not mistreated”
- Will do business with everyone (east and west)
- Aspirations to be involved in other areas of the fuel cycle
- Uranium cannot be replicated, and the goal is to maximize competitive advantage in the parts of the fuel cycle cannot be built any time or anywhere (i.e. conversion, enrichment, fabrication are not restrained by the location or geological uranium deposits, and thus can theoretically be deployed anywhere with great flexibility on timing).

Kansai Electric Power update on Japanese nuclear

- Simple message: “**Japan is back**”
- 15 years since Fukushima, and 15 reactors restarted
- The next chapter is operating existing reactors safely, establishing the nuclear fuel cycle, then move to building new reactors
- Formal targets:
 - 2-5 large scale reactors by 2040
 - 11-14 large scale reactors by 2050s

Global Atomics view on what is needed for nuclear capacity to grow globally

- Strong supportive policy
- Demand signals from utilities and end users
- Developing supportive communities.
- Financing piece needs to be viable and sustainable
- Exploration spending is reportable and trackable and can tell you the health of the supply pipeline
 - 8-20 year from discovery to production
 - This varies a lot by jurisdiction
 - It's a big headwind
 - Fortunately, fuel cycle partners are pushing ahead with this.

Saskatchewan on challenges and successfully

- Sask has 20-25 mines operating or being built: Investing in the local communities is critical to success, given the support
- Regulatory challenges often arise
 - Prime Minister is working to make it work at the pace of business
- Getting talent:
 - This industry has had ebbs and flows. This time, there is a substantial opportunity. Responsible approach is key to ensuring there are no setbacks along the way
 - Saskatchewan working to source that future talent (not Sask Polytechnique)

Global Atomics update

- New Mexico has produced over 4.3 million lbs of uranium historically
 - But left a poor history
 - Must understand that land and water contamination exist
 - Must address issues of the past before allowing new operators
 - Proposing to do in-situ recovery in New Mexico
- Operates in Australia where it has recently wrapped up mining in Beverly area

Final thoughts

- General Atomics: The uranium resource sector is very different from the other stages of the fuel cycle
- Kansai Electric Power: Key is "disciplined vision"
 - Everyone on same page about reducing risk BUT HOW?
 - Meeting in person is becoming more important to help generate collaboration: "becoming more analog in an increasingly digital world"

- Kazatomprom: confident that action will happen
- Saskatchewan: Responsible longview while being ambitious in build-out

The fuel cycle innovation frontier

Panelists

Moderator - Luc Van Den Durpel, Founding Partner, Nuclear-21

Cécile Evans, Chair of UFMWG, Marketing Director, Back-end and New Nuclear Activities, Orano

Stephen Long, Chief Executive Officer, Global Laser Enrichment LLC (Silex)

Jason Murphy, Vice President of Nuclear Fuels, Constellation

Tuomas Rantala, Head of Fuel Unit, Teollisuuden Voima Oyj (TVO)

Constellation update and views

- CEG has a fleet of 21 light water reactors (LWRs)
- Goal is getting most out of existing fleet
- Recently got approval for 80 years for one plant and look forward to circling back on other plants to 80 years
- 100 years is possible technically
- Higher electricity pricing means
 - First uprate completed last year
 - A number of uprates in the queue for balance of 2020s and in to 2030s
- LEU+
 - The availability of LEU+ will allow CEG to unlock 24 month reload cycles, creating material cost savings via efficiency gains
- Safety
 - Coated claddings are now being used to improve fuel safety
 - All possible with partnerships under the DOE's accident tolerant fuel programs
- With respect to the use of LEU+ nuclear fuels in the US (i.e. those fuels that are enriched beyond the usual 4%-4.5% to as high as 10%) Just a few years ago, the discussion was around huge hurdles around facility modifications, licensing, and transportation for more highly enriched nuclear fuel
 - Multiple enrichers now able to deliver this, and
 - By late 2020s / early 2030, many US plants will be extending fuel cycles
 - Key to realizing this was demand, in the form of formalized, signed contracts

- It's critical that any nuclear reactor project has a strong ties with fuel suppliers
 - The adoption for new types of fuel will be 10x harder than the adoption of LEU+
- Keys to successfully deploying new nuclear capacity are capital formation, and project execution
 - The West should apply the China model to other countries
 - CEG one of the companies that would prefer to be third not first on deploying new nuclear reactors in the US.

Silex update and views

- Silex's laser-based enrichment technology overcomes current challenges that make current enrichment uneconomic in the long-term
- More economic performance, with =gGreater flexibility
- Only company at this stage with an operating facility
- Completed a TRL-6 demonstration last fall, working on next demonstration now
- Has license application underway that will be wrapped up in November with license in hand by 2027, for site near Paducah
- Silex on public sector role
 - Efficient regulations
 - Funding where needed, or creating an environment where private funding can flourish
 - Creating a level playing field
 - Being one of the few none state backed players in the enrichment space, would like to be believe
 - Ultimately, their license to operate is based on safety and public trust
 - But, the regulatory process must be efficient.
 - Silex recently got some DOE grant money, this type of funding helps to improve private market risk taking
- With respect to the use of LEU+ nuclear fuels in the US (i.e. those fuels that are enriched beyond the usual 4%-4.5% to as high as 10%) Just a few years ago, the discussion was around huge hurdles around facility modifications, licensing, and transportation for more highly enriched nuclear fuel
 - Multiple enrichers now able to deliver this, and
 - By late 2020s / early 2030, many US plants will be extending fuel cycles
 - Key was demand, in form of formalized, signed contracts
- It's critical that any nuclear reactor project has a strong ties with fuel suppliers

- The adoption for new types of fuel will be 10x harder than the Jason keys

Expectations for nuclear-powered ships in the shipbuilding and maritime industry

Dr Jekyoung Lee, Senior Researcher, HD Korea Shipbuilding & Offshore Engineering

Motivation = decarbonizing the shipping industry, but the reality is more challenging

- Land based reactors are stable conditions
- Ships experience continuous pitching and rolling
- Marine environment is very harsh
 - This is big challenge: safe integration in light of conditions

What about the already US aircrafts?

- Naval ships enjoy costs as a secondary concern and have specialized crews
 - For commercial applicability, competitive costs and ease of use of very important
- What is needed:
 - Cannot simply transfer military tech, must be redesigned
 - A new set of commercial requirements are needed, as it innovation

Which countries have combined experience of shipbuilding and nuclear plant construction

- Korea one of only a few that has both skills, thus is it a unique opportunity for Korea

Risks?

- It might not work, but, most encouraging solution today to the need to decarbonize global sea-shipping

Beyond offtake: new energy user roles

Moderator - Malcolm Moore, Energy Editor, Financial Times

Dr Benjamin Reinke, Senior Vice President of Global BD and Deputy Chief Commercial Officer, X-energy

Greg Schulze, Project Design Advisor, Exxon Mobil

Jeffrey Miller, Senior Vice President of Business Development, TerraPower

Fabio Montemurro, Principal – Energy Strategy & Innovation, Amazon Web Services

Goran Arya, Director, Energy Origination & Structuring, EMEA, Equinix

X-Energy

- Key theme of the week has been the importance of fuel supply chain
- Now has a license for gen 4 fuel fabrication, and has made progress on facility

Exxon

- Looking to develop nuclear power as a source of heat for industry in the US (to replace natural gas, over time)

Amazon

- Will help X-Energy move down the cost curve
- Willing to put real money on the table to advance nuclear energy

Equinix

- Will to partner with nuclear industry to see it grow successfully in the US

TerraPower

- Nuclear construction permit now received
- Active nuclear job site in Wyoming, USA

Timetable mismatch between aggressive datacenter build-out plans and the time required to develop new nuclear power, thus why nuclear?

Equinix

- Co-location provider, 100-1000 s of data center customers, and sees this growing very far into the future

Amazon

- Committed to net zero, all scopes, by 2024
- Path to net zero won't be linear. Amazon knows renewables are not enough. Thus, nuclear
- Amazon is planting the seeds for its future use of nuclear energy
- Goal
 - To make nuclear repeatable assets close
 - Can't just sign a PPA when the technology doesn't exist yet

Exxon

- Interest in nuclear heat in place of gas
- Nuclear is one potential pathway for decarbonized heat source
 - Goal is to enable nuclear as an option for them
 - Could also be natural gas with CCS

- If US industry doesn't engage, its not reasonable to expect these opportunities to emerge on their own
 - The idea is to meet the industry half way
- Nuclear industry doesn't have a technology problem, it has a DEPLOYMENT problem
 - execution excellence and delivery is a problem in the sector
 - Doesn't see nuclear energy as fundamentally different from a non-nuclear mega-projects (not the exact same but similar)
 - Exxon wants to leverage their delivery model to improve nuclear delivery
 - Intends to deliver a report with a delivery model

Amazon on risks to deploying new nuclear

- Needs a full complete licensable design. There's a patchwork. Aerospace has only one
- A mature robust domestic supply chain is also needed
- Grid infrastructure is very in need: "no point for a PPA if the connections take 7 years"

Equinix on risks to deploying new nuclear

- Not clear how it gets integrated into grid
- Grid infrastructure: similar challenges for wind and solar

Exxon on risks to deploying new nuclear

- LNG / CCGT is a good analogy: The technology provider does not get asked to assume all the risk, in other large industrial projects
 - The EPC can hold some risk in nuclear, but not the bulk
- The owner operator ultimately needs to hold the bulk of the risk
 - Exxon has a heavy hand in all of their projects
 - Putting it onto the technology provider or builder is a misalignment
 - Must break this model in nuclear

X-Energy on risks to deploying new nuclear

- Agrees with the customer holding the execution risk
- Thus X-Energy seeks out customers that can bring a lot to the table

TerraPower on risks to deploying new nuclear

- Hyundai Construction is a key as their EPC as a sharer of risk
- BUT, start-up vendors must assume some risk

Outlook for 2027

- X-Energy
 - Big milestones.
 - Has a construction permit in front of the NRC right now
- Exxon
 - More reports from consortium, with hopefully an example
- Amazon
 - Construction underway / FID
- Equinix
 - Corporation buyers helping to push this forward
- TerrPower
 - Hyperscalers showing more evidence they are looking forward on their demand loads to the 2030s

Reaffirming U₃O₈ price forecasts

Based on our view of increasingly tight uranium (U₃O₈) markets, we maintain our recently updated spot U₃O₈ price forecasts. Our 2026, 2027E, and long-term U₃O₈ price forecasts are \$104.20 per pound (/lb), \$129.80/lb, and \$84.75/lb, respectively.

Exhibit 1: Our U₃O₈ price forecast remains bullish, with expectations of a peak in prices in 2026 and a \$84.75/lb LT price (below spot).

BofAe annual U₃O₈ price forecast changes (2023-2031E)

	US\$/lb	2023A	2024A	2025A	2026E	2027E	2028E	2029E	2030E	2031E (LT)
Current	U ₃ O ₈	60.20	86.50	72.60	104.20	129.80	111.75	102.75	93.75	84.75
yoy change	%	20%	44%	-16%	44%	25%	-14%	-8%	-9%	-10%

Source: UxC, LLC (www.uxc.com); BofA Global Research

BofA GLOBAL RESEARCH

Please see our [Primer](#) for an overview of the Nuclear Fuel Cycle.

Uranium (U₃O₈) market prices

The spot price of uranium concentrate (U₃O₈) has been improving steadily since 2017 with particularly strong performance with the peak reaching \$107 on 02-Feb-24 See Exhibits 2 and 3 below.

Exhibit 2: U₃O₈ prices have steadily risen since 2017 and have moderated in the mid \$80s over the past month.

Daily price of uranium (U₃O₈) in US\$/lb

Source: UxC, LLC

BofA GLOBAL RESEARCH

Exhibit 3: U₃O₈ prices are still well below the long-term peak reached in 2007.

Monthly price of uranium (U₃O₈) in US\$/lb

Source: UxC, LLC

BofA GLOBAL RESEARCH

In our view, the rising U₃O₈ price has been driven by a range of factors, among which the key drivers are: (1) constrained supply that is the result of a seven year U₃O₈ bear market following from the 2011 Fukushima accident; (2) an increase in government regulatory and financial support of nuclear energy; (3) increased recognition by energy consuming entities and individuals that nuclear energy will be needed to decarbonize electrical energy generation; and (4) more recently, potential for Artificial Intelligence (AI) to drive significant growth in energy-intensive datacenters to which nuclear energy is suited given its ability to supply huge quantities of carbon-free baseload power.

Another factor that has helped to pressure U₃O₈ prices higher has been the financial players like the Sprott Physical Uranium Trust (SPUT), SPUT is an investment trust that acquires U₃O₈ on the spot market and holds it indefinitely in order to offer investors a vehicle through which to gain exposure to the spot U₃O₈ price. We map the relationship between SPUT purchases and U₃O₈ spot prices in Exhibits 4 and 5 below.

Exhibit 4: UxC daily spot price vs. cumulative SPUT purchases of U₃O₈.

When SPUT holdings rise rapidly the U₃O₈ spot price tend to rise.

BofA GLOBAL RESEARCH

Conversion market prices

Conversion pricing in North America and the European Union is declining after reaching an all time high of \$97 and \$95 respectively in February 2024 and could continue appreciating given reports of still tight supply (i.e., Kazatomprom 10% production curtailment and U.S. ban on Russian uranium products). See Exhibits 6 and 7 for a pricing history.

While Western conversion capacity is gradually expanding, near-term relief remains limited. The ConverDyn Metropolis facility is the only operating commercial UF₆ conversion plant in the U.S. that is ramping output by ~20% to over 10,000 tonnes in 2026, though this alone is insufficient to meet growing demand.

Orano's Philippe Coste facility, meanwhile, has faced compounding setbacks with a slower-than-planned ramp and an unplanned three-month weather-related outage in early 2026, with full-year output now expected at just 9kt down from 13kt in 2025. Longer-dated additions, including UEC's planned U.S. conversion facility remain years from first production. Until meaningful new capacity comes online, conversion tightness is likely to persist, implying continued pent-up demand for U₃O₈ as feedstock and sustained upward pressure on conversion prices, which are currently near all-time highs.

Exhibit 6: North American (NA) conversion pricing (US\$ / KgU).

Conversion pricing is declining after \$97 all-time high in Dec-24.

Enrichment market prices

Global enrichment markets are tightening rapidly, which should lead to increasing demand for U_3O_8 through a rising rate of overfeeding. We think it is feasible that the U_3O_8 price reaches a new all-time high.

Exhibit 8: SWU pricing has strengthened substantially since Russia's invasion of Ukraine, to an all-time high.

Where we are in the cycle: price & volume

Below we summarize uranium market volume trends and how they relate to price.

Spot vs. Term Market

Uranium (yellow cake, conversion, and/or SWU) is bought and sold in one of two markets, either the term or the spot. While the spot market is defined by any activity that calls for delivery within the next 12 months, spot price indicators are largely driven by activity that calls for “prompt” delivery over the next three months. Meanwhile, the term market covers product that will be delivered 12 months out (or longer).

The below exhibit below maps the relationship between the spot and term prices for U_3O_8 (Yellowcake). Term prices generally tend to trade at a premium to spot. However, in late 2023, this trend flipped as spot began trading at a premium to term. This marked the start of another bullish period for uranium, similar to the period from 2004-07. While the 2004-07 period suggests that there may be a correction once supply and demand balance. Our view is that this will only occur when the uranium deficit levels out, no earlier than 2026, with risk to this being extended.

Exhibit 9: Spot prices recently began trading at a premium to term prices, indicating the start of another bull-market for uranium.

Monthly average spot and term prices of U_3O_8

Source: UxC, LLC

BoFA GLOBAL RESEARCH

Spot and term market volumes and the U_3O_8 pricing cycle

As you'd expect, trading volumes correlate positively with prices (i.e., when prices go up, volumes go up, and vice versa). This relationship is illustrated below: U_3O_8 prices tend to strengthen during periods where term contracting is a higher portion of total volumes.

Exhibit 10: U₃O₈ prices strengthen when term volumes are a higher portion of total volumes

 Global U₃O₈ market volumes by % spot/term vs. price

Source: UxC, LLC

BofA GLOBAL RESEARCH

Historically, brokers, traders and other financial institutions have been the dominant group on the selling side of the spot market (see Exhibit 21). On the buying side, utilities were long the dominant group, but were dethroned in 2005 with the invention of the uranium carry trade, when brokers, traders, and other financial institutions used their balance sheets to help utilities offload inventory from their balance sheets. In 2005, brokers, traders, and other financial institutions accounted for 60% of annual spot purchase volumes (see Exhibit 22). In 2025, brokers, traders, and other financial institutions accounted for ~74% of annual spot purchase volumes.

In the term market, buyers are almost exclusively utilities while sellers are predominantly producers. Over the last three years, producers have consistently accounted for a smaller share of annual term selling volumes, decreasing from 92% in 2023 to 76% in 2025. Rising utility participation in the term market is a driver of higher U₃O₈ prices, as churn (when brokers, traders, and other financial institutions trade amongst themselves) is replaced by end-user consumptive demand.

Exhibit 11: U₃O₈ prices have risen 150% since 2020 while term and spot volumes have risen 102% and fallen 40%, respectively.

Glossary

Companies & organizations

CCJ = Cameco Corp

CEG = Constellation Energy Corp

EDF = Électricité de France Group

NAC = National Atomic Company (Kazatomprom)

OKLO = Oklo Inc

OPG = Ontario Power Generation

SPUT = Sprott Physical Uranium Trust

STDN = Standard Nuclear Inc

TEPCO = Tokyo Electric Power Company

TLN = Talen Energy Corp

TVO = Teollisuuden Voima Oyj

UEC = Uranium Energy Corp

VST = Vistra Corp

WNA = World Nuclear Association

Industry acronyms

AP1000 = Advanced Passive 1000, a Gen III+ nuclear reactor designed by Westinghouse Electric Company.

BWRX = GE-Hitachi BWRX reactor design

CCGT = Combined Cycle Gas Turbine

CCS = Carbon Capture and Storage

COP28 = Conference of the Parties 28, the 28th United Nations Climate Change Conference

DOE = U.S. Department of Energy

EPC = Engineering, Procurement & Construction

FID = Final Investment Decision

GW = Gigawatt

GWe = Gigawatt-electric or one billion watts of electric capacity

HALEU = High-Assay Low-Enriched Uranium

LEU = Low Enriched Uranium

LNG = Liquefied Natural Gas

LTO = Long-Term Operation

LWR = Light Water Reactor

NRC = U.S. Nuclear Regulatory Commission

PPA = Power Purchase Agreement

SMR = Small Modular Reactor

SWU = Separative Work Unit

TRL-6 = Technology Readiness Level 6

U3O8 = Triuranium Octoxide

UF6 = Uranium Hexafluoride

Price objective basis & risk

Cameco Corporation (YCCO / CCJ)

Our C\$190 (\$133) PO is based on 1.0x our NAV and 35.0x 2026E & 34.5x 2027E EV/EBITDA (all 3 equally weighted). We use a CADUSD FX rate of 1.42. The 35.0x 2026E EV/EBITDA is above its long-term average of c.15x, but below the long-term peak of c.40.0x that occurred when nuclear energy growth was last very strong. The 34.5x for 2027E is a slight discount to 35.0x used for 2026E given time-related risk. The 1.0x P/NAV is above the longer-term average of c.0.9x but below peak of 1.35x. We think 1.0x is justified given Cameco's world-class tier one assets in favorable jurisdictions (Canada) & potential exploration upside partially offset by voluntary idling of one of those tier-one assets (but is in the process of restarting).

Downside risks: 1) slower-than-expected global energy demand growth, 2) continued push-out of a Japanese nuclear fleet restart, 3) any worsening in sentiment toward nuclear or more favorable sentiment toward alternative power fuel sources, and 4) any production problems at Cameco's only operating mine, Cigar Lake.

Upside risks: 1) additional potential mine disruptions that may further improve supply-demand dynamics, 2) better pace of reactor development in key future demand countries (China, Japan, and India), 3) more stringent carbon emissions restrictions in key countries, encouraging nuclear power as an environmentally friendly base line energy source, 4) a material rise in natural gas prices making nuclear power generation competitive in the US.

Constellation Energy Corp (CEG)

Our \$341 PO is based on a sum-of-the-parts (SOTP). First, we use a P/E methodology for the base earnings. We evaluate CEG's average P/E premium over the utility index, XLU, for 2024 and 2025 which is about 41%. We apply a 10% execution risk on this premium. This leads to a 31% premium on our base business. We then apply our 2028 electric utility multiple of 16.0x, we gross this up by 5% to 16.8x, reflecting sector capital appreciation. We then apply our premium and the peer group multiple to get our base applied multiple of 22.2x. We do a DCF of the Clinton and Crane datacenters using an 8% discount rate. We use our calculated 2028 EBITDA and net debt for Calpine. We apply an EBITDA multiple based on the peer group's 2027 EBITDA multiple, which leads to a 7.9x multiple.

Risks to achievement of the price objective are 1) changes in energy, capacity, and related commodity prices, 2) retail margins, renewals, win rate, & overall market share, 3) operating, capital, and fuel costs, 4) capital allocation decisions including M&A, growth, and share repurchases, 5) nuclear operational performance, incidents, or accidents, 6) legislative, judicial, tax, and regulatory changes broadly, 7) nuclear fuel costs & availability, 8) change in environmental standards for generation assets, 9) management turnover, 10) pension & nuclear decommissioning trust returns, 11) credit rating agency requirements, 12) interest rates, and 13) NetPower ownership & valuation.

Oklo Inc. (OKLO)

Our price objective of \$80 is premised on a DCF-based valuation framework, which we believe better captures the elevated volatility and longer-dated cash flow profile of Oklo's equity.

Our cost of equity is derived using a risk-free rate of 4.6% (10-year U.S. Treasury), a U.S. equity risk premium of 8.42%, and a beta of 2.07, resulting in a cost of equity of approximately 22%. This reflects the company's early-stage development profile, regulatory uncertainty, and heightened equity volatility. We assume a 6.5% cost of debt, which together, based on a 65% of debt to capital, imply a weighted average cost of capital (WACC) of 11%.

We anchor our valuation to 2030, aligning with our expectation for initial commercial deployment, contracted capacity ramp, and a meaningful cash flow inflection as Oklo transitions toward scaled operations.

We apply a 5% terminal growth rate, supported by long-duration demand for firm, carbon-free power, particularly from data center and hyperscale customers.

Upside risks: 1) Lower capex advantage versus peers drives adoption, 2) HALEU availability and price results in higher returns, 3) Recycling and radioisotopes businesses provide revenue upside, 4) Incremental wins from hyperscaler customers accelerated deployments.

Downside risks: 1) regulatory delays, 2) competition from other energy sources, 3) emerging SMR competitors, 4) manufacturing challenges, 5) fuel supply constraints, 6) safety risks, and 7) high upfront capital requirements.

Standard Nuclear (STDN)

Our \$15 PO is based on a DCF, which we believe is the most appropriate methodology given the company's early-stage development profile and limited set of direct public comparables. To reflect the varying levels of commercial certainty across the business, we separate future cash flows into three categories: contracted revenue, qualified customer revenue, and future market opportunity.

Contracted revenue is discounted using a market-based cost of equity, reflecting the highest level of commercial visibility within our framework. Qualified is discounted using a fuel-manufacturing peer framework, reflecting greater uncertainty than contracted revenue but lower risk than broader market adoption. Future market opportunity is discounted using an advanced-reactor peer framework to reflect the speculative nature of long-term advanced nuclear deployment. We apply a 2.0% terminal growth rate, which we view as appropriate for a mature advanced nuclear fuel business.

Combining the three cash flow buckets results in an enterprise value of \$1.27bn. Incorporating our 2030 balance sheet assumptions, which we use as the common valuation year across our nuclear coverage universe, produces an equity value of \$2.19bn. Based on the shares outstanding, this supports our \$15 PO.

Risks to Downside: Delayed reactor deployment, lower capacity expansion, lower

customer conversion, regulatory issues, increased competition, fuel supply chain delays, lower pricing

Talen Energy (TLN)

Our \$422 price objective is based on a sum of the parts on 2028E EBITDA. We use the mid-cycle power EV/EBITDA multiple of 7.1x for the PJM & Reliability-must-run (RMR) contracts. We apply a 5% premium to account for capital appreciation, leading to our base multiple of 7.5x.

For the base business, we apply a 10% discount since about 25% of revenue comes from the capacity auction and TLN's entire footprint is in PJM. With the complex regulatory environment in PJM, the uncertainty of the future auctions, and the political scrutiny in the region, we feel it is fair to value the base business at a discount.

For the Susquehanna datacenter contract, we use a discounted cash flow (DCF) of the full contract at \$83/MWh with 8% discount rate. We combine the enterprise value (EV) of the PJM/RMR segment and the contract value to get our total EV.

This leads to a 22% premium and an 8.6x multiple

Downside risks to our PO are 1) wholesale power, natural gas, & capacity prices, 2) changes to regulatory, political, or legislative standards, 3) failure to renegotiate datacenter contracts, 4) denial of reliability-must-run agreements, 5) operational performance, 6) natural disasters, 7) interest rates, and 8) nuclear fuel access/cost.

Vistra (VST)

Our \$196 price objective is based on a sum-of-the-parts valuation using 2028E EBITDA. For the core power business, we apply a mid-cycle EBITDA multiple of 7.1x, which we gross up by 5% for capital appreciation, resulting in a base multiple of 7.5x.

We value the datacenter-related power purchase agreements associated with Comanche Peak, Davis-Besse, Perry, and nuclear uprates using a discounted cash flow analysis, applying an 8% discount rate to estimate market value.

For the gas business, we apply the 2028 peer group EBITDA multiple of 8.1x. For the nuclear business, we apply an 8.75x EBITDA multiple, derived as the midpoint between the grossed-up mid-cycle power multiple (7.5x) and our estimated multiple for fully contracted assets (10.0x). This reflects a balance between the segment's strong asset quality and the increasing complexity and reduced flexibility associated with contracting nuclear units.

Downside risks to our PO are 1) changes to regulatory, political, or legislative standards, 2) wholesale power, natural gas, & capacity prices, 3) competitive & regulatory change to retail businesses, principally in Texas, 4) operational performance, 5) natural disasters, 6) interest rates, and 7) nuclear fuel access/cost.

Analyst Certification

We, Lawson Winder, CFA and Rinny Singh, hereby certify that the views each of us has expressed in this research report accurately reflect each of our respective personal views about the subject securities and issuers. We also certify that no part of our respective compensation was, is, or will be, directly or indirectly, related to the specific recommendations or view expressed in this research report.

^{R1} Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. **VOLATILITY RISK RATINGS**, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. **INVESTMENT RATINGS** reflect the analyst's assessment of both a stock's absolute total return potential as well as its attractiveness for investment relative to other stocks within its Coverage Cluster (defined below). Our investment ratings are: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. An investment rating of 6 (No Rating) indicates that a stock is no longer trading on the basis of fundamentals. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster ^{R2}
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

^{R2}Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

INCOME RATINGS, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend. *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Price Charts for the securities referenced in this research report are available on the [Price Charts website](#), or call 1-800-MERRILL to have them mailed.

One or more analysts contributing to this report owns stock of the covered issuer: Constellation Energy

BofAS or one of its affiliates acts as a market maker for the equity securities recommended in the report: Cameco Corp., Constellation Energy, Oklo Inc., Standard Nuclear, Talen Energy, Vistra.

BofAS or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: Standard Nuclear.

The issuer is or was, within the last 12 months, an investment banking client of BofAS and/or one or more of its affiliates: Constellation Energy, Oklo, Standard Nuclear, Talen Energy, Vistra.

BofAS or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Cameco Corporation, Constellation Energy, Oklo, Standard Nuclear, Vistra.

The issuer is or was, within the last 12 months, a non-securities business client of BofAS and/or one or more of its affiliates: Cameco Corporation, Constellation Energy, Oklo, Standard Nuclear, Talen Energy, Vistra.

BofAS or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Constellation Energy, Oklo, Standard Nuclear, Vistra.

BofAS or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Constellation Energy, Oklo, Standard Nuclear, Talen Energy, Vistra.

BofAS together with its affiliates beneficially owns one percent or more of the common stock of this issuer. If this report was issued on or after the 9th day of the month, it reflects the ownership position on the last day of the previous month. Reports issued before the 9th day of a month reflect the ownership position at the end of the second month preceding the date of the report: Cameco Corporation, Talen Energy, Vistra.

BofAS or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: Cameco Corp., Constellation Energy, Oklo Inc., Standard Nuclear, Talen Energy, Vistra.

The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of BofAS and/or one or more of its affiliates: Constellation Energy, Oklo, Talen Energy, Vistra.

BofA Global Research personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

One or more Canada-based analysts contributing to this report has visited the material operations of the issuer within the last 12 months: Cameco Corporation.

From time to time research analysts conduct site visits of covered issuers. BofA Global Research policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.

Prices are indicative and for information purposes only. Except as otherwise stated in the report, for any recommendation in relation to an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report and in relation to a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including BofA Securities trading desks.

The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.

Officers of BofAS or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.

Refer to [BofA Global Research policies relating to conflicts of interest](#).

"BofA Securities" includes BofA Securities, Inc. ("BofAS") and its affiliates. Investors should contact their BofA Securities representative or Merrill Global Wealth Management financial advisor if they have questions concerning this report or concerning the appropriateness of any investment idea described herein for such investor. "BofA Securities" is a global brand for BofA Global Research.

General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.

This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.

Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. Digital assets are extremely speculative, volatile and are largely unregulated. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS). If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

Any attempt to utilize this document or any of its content in connection with an AI tool without explicit written permission from BofA Global Research is strictly prohibited. BofA Global Research utilizes AI, including machine learning and other technologies, to enhance the services we provide to our clients. These technologies assist our analysts in various aspects of their work, including but not limited to data analysis, content extraction, content creation, data aggregation and summarization and identifying relevant information from diverse sources. All AI-driven processes are subject to review by BofA Global Research employees. BofA Global Research information is distributed simultaneously to internal and client websites and other portals by BofA Securities and is not publicly-available material. Any unauthorized use or disclosure is prohibited. Receipt and review of this information constitutes your agreement not to redistribute, retransmit, or disclose to others the contents, opinions, conclusion, or information contained herein (including any investment recommendations, estimates or price targets) without first obtaining express permission from an authorized officer of BofA Securities.

Materials prepared by BofA Global Research personnel are based on public information. Facts and views presented in this material have not been reviewed by, and may not reflect information known to, professionals in other business areas of BofA Securities, including investment banking personnel. BofA Securities has established information barriers between BofA Global Research and certain business groups. As a result, BofA Securities does not disclose certain client relationships with, or compensation received from, such issuers. To the extent this material discusses any legal proceeding or issues, it has not been prepared as nor is it intended to express any legal conclusion, opinion or advice. Investors should consult their own legal advisers as to issues of law relating to the subject matter of this material. BofA Global Research personnel's knowledge of legal proceedings in which any BofA Securities entity and/or its directors, officers and employees may be plaintiffs, defendants, co-defendants or co-plaintiffs with or involving issuers mentioned in this material is based on public information. Facts and views presented in this material that relate to any such proceedings have not been reviewed by, discussed with, and may not reflect information known to, professionals in other business areas of BofA Securities in connection with the legal proceedings or matters relevant to such proceedings.

This information has been prepared independently of any issuer of securities mentioned herein and not in connection with any proposed offering of securities or as agent of any issuer of any securities. None of BofAS any of its affiliates or their research analysts has any authority whatsoever to make any representation or warranty on behalf of the issuer(s). BofA Global Research policy prohibits research personnel from disclosing a recommendation, investment rating, or investment thesis for review by an issuer prior to the publication of a research report containing such rating, recommendation or investment thesis.

Any information relating to sustainability in this material is limited as discussed herein and is not intended to provide a comprehensive view on any sustainability claim with respect to any issuer or security.

Any information relating to the tax status of financial instruments discussed herein is not intended to provide tax advice or to be used by anyone to provide tax advice. Investors are urged to seek tax advice based on their particular circumstances from an independent tax professional.

The information herein (other than disclosure information relating to BofA Securities and its affiliates) was obtained from various sources and we do not guarantee its accuracy. This information may contain links to third-party websites. BofA Securities is not responsible for the content of any third-party website or any linked content contained in a third-party website. Content contained on such third-party websites is not part of this information and is not incorporated by reference. The inclusion of a link does not imply any endorsement by or any affiliation with BofA Securities. Access to any third-party website is at your own risk, and you should always review the terms and privacy policies at third-party websites before submitting any personal information to them. BofA Securities is not responsible for such terms and privacy policies and expressly disclaims any liability for them.

All opinions, projections and estimates constitute the judgment of the author as of the date of publication and are subject to change without notice. Prices also are subject to change without notice. BofA Securities is under no obligation to update this information and BofA Securities ability to publish information on the subject issuer(s) in the future is subject to applicable quiet periods. You should therefore assume that BofA Securities will not update any fact, circumstance or opinion contained herein.

Subject to the quiet period applicable under laws of the various jurisdictions in which we distribute research reports and other legal and BofA Securities policy-related restrictions on the publication of research reports, fundamental equity reports are produced on a regular basis as necessary to keep the investment recommendation current.

Certain outstanding reports or investment opinions relating to securities, financial instruments and/or issuers may no longer be current. Always refer to the most recent research report relating to an issuer prior to making an investment decision.

In some cases, an issuer may be classified as Restricted or may be Under Review or Extended Review. In each case, investors should consider any investment opinion relating to such issuer (or its security and/or financial instruments) to be suspended or withdrawn and should not rely on the analyses and investment opinion(s) pertaining to such issuer (or its securities and/or financial instruments) nor should the analyses or opinion(s) be considered a solicitation of any kind. Sales persons and financial advisors affiliated with BofAS or any of its affiliates may not solicit purchases of securities or financial instruments that are Restricted or Under Review and may only solicit securities under Extended Review in accordance with firm policies.

Neither BofA Securities nor any officer or employee of BofA Securities accepts any liability whatsoever for any direct, indirect or consequential damages or losses arising from any use of this information.
