

ON Semiconductor Corp. (ON): Investor Day highlights 2030 financial targets, growth in power products, and the outlook for automotive

Key stock takeaways: We attended onsemi's Investor Day in New York. We see the stock reaction (down 9%) as overdone in light of elevated expectations heading into the event. We view the company's 2030 financial targets (which were slightly ahead of the Street (VA)) as very solid, although they may have fallen slightly short of the most bullish expectations. Importantly, we believe the company laid out a strong case for why it is well positioned to benefit from secular growth trends in power semis tied to both AI datacenters and physical AI. In addition, we are encouraged by the company's plans to return 100% of FCF to shareholders while maintaining low capital intensity. From here, we believe the focus will be on the company's execution toward its targets and growth objectives in the near- to medium-term. Our detailed takeaways follow.

Key takeaways include:

- **Financial model and 2030 targets:** Onsemi laid out its 2026-30 model for a revenue CAGR of 12%–14%, reaching ~\$11 bn by 2030. Its targets contemplate gross margin of 53%, operating margin of ~38%, and free cash flow of more than \$3.5 bn in 2030. The model assumes flat SAR in automotive, no major new capacity investments, and limited brownfield spending at ~5% capital intensity. These targets exclude any proposed transactions which have not closed.
- **Power semis portfolio:** Management emphasized the growing importance of solving for power density, particularly given the shift to high-voltage environments. The company's portfolio - which includes traditional Si, SiC, and GaN - allows it to offer a variety of solutions across Treo, sensing, control, and the newly-introduced Embedded Power Platform, while enabling it to offer customers discrete standalone products. Management characterized this flexibility - and its ability to optimize across the full high-voltage stack - as a key competitive advantage.
- **AI datacenter opportunity:** The company sees the AI datacenter bottleneck shifting from compute to power delivery, as racks move from tens of kW toward MW-scale loads. Onsemi sees content per rack rising from ~\$15K to ~\$115K as architectures migrate toward higher-voltage distribution, increased use of SSTs, and further deployment of vGaN (vertical GaN). Overall, management sees these trends - and the introduction of its differentiated EPP platform - as supportive of its guidance for AI datacenter revenue to double YoY in 2026 and 2027, and to

Analysts employed by non-US affiliates are not registered/qualified as research analysts with FINRA in the U.S.

grow from ~\$500 mn in 2026 to ~\$2.5 bn in 2030.

- **Automotive and Industrial:** Onsemi expects automotive/industrial revenue to grow at CAGRs of 9%/10% (respectively) through 2030. Despite an expectation of flat SAR, management believes higher content from electrification, sensing, and a shift to zonal architectures in SDVs can support ~9% growth above SAR through 2030 with content per vehicle of up to \$2,000. In Industrial, the AI “halo effect” and leveraging the company’s automotive technology in other applications such as Physical AI (in which it sees a TAM of \$6 bn by 2030) should drive revenue growth above GDP.

Price target and risks: We are Neutral rated on ON. Our 12-month target price of \$95 reflects a 20X P/E multiple applied to our normalized EPS of \$4.75. Key upside/downside risks: (1) any demand weakness, particularly in the Automotive end market, could drive downside; (2) gross margin execution and the timing around the actualization of self-help initiatives could drive earnings upside or downside.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock’s total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region’s Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts’ investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at <https://www.gs.com/research/hedge.html>.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs’ involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs

Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.
