Valuation Methodology and Risks

MiniMax (0100.HK)

We apply discounted cash flow (DCF) methodology to value the company, assuming a 15% WACC and 3% terminal growth. Our PT implies 25x P/S for 2027.

Risks to Upside

- Launching global SOTA model
- Eased market competition

Risks to Downside

- Geopolitical risk
- Intensified competition and price war
- Model performance lagging peers

Z.AI CO., LTD. (2513.HK)

- Global expansion working with overseas CSP
- Easing market competition

Risks to Downside

- Computing constraints

Alibaba Group Holding (BABA.N)

Kingsoft Cloud Holdings (KC.O)

Base case, derived from 5.5x 2027e EV/EBITDA multiple. This multiple is at a discount to the US neocloud peer average of 13x and median of 10x to reflect lower asset yields and greater uncertainty around supply chain availability. We prefer EBITDA for comparability across companies given differences in depreciation policies and limited EBIT.

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.
