

China Thematic Research

Spotlight on Physical AI

[Unitree's A-share IPO](#) and [AgiBot](#) eyeing a HK IPO this year have brought the physical/embodied AI theme back in scope, particularly the humanoid robot supply chain. *Please see page 5 for the Top 5 questions asked about China's physical AI by global investors.* The investment case for China's humanoid robot industry rests on three facts. **First**, the mass-production inflection point appears close, as we forecast global shipments to rise from 18,000 units in 2025 to 60,000 in 2026 and [1.75 million by 2030](#) (a c150% shipment CAGR, Figure 5), with China shipments expected to hold over half of the market share. **Second**, localization offers clear upside, with high-entry-barrier components such as planetary roller screws and six-axis force sensors remain below 50% localized, creating localization upside for Chinese leading component makers. **Third**, domestic policy supports can accelerate commercial validation. The ["Six Networks"](#) buildout provides communication, compute, and logistics foundations, while the [2026 Special Action for Real-Scenario Training by MIIT and SASAC](#), encouraging SOE procurement, accelerates commercial validation. **Our screen on China stocks in various segments of humanoid production based on market cap and 3m ADT is in Figure 21, with the top holdings by onshore mutual funds listed in Figure 2. We see upstream components subject to localization opportunities to benefit disproportionately from volume ramp, notably planetary roller screws (40–50% localized) and six-axis force sensors (<30% localized). Advanced cutting tools and upstream materials should also benefit.** Following the positioning reset, we believe the AI names' fundamental resilience shown in 2Q earnings season could fuel a recovery of the AI trade in August.

Humanoids: global shipments to show a 150% CAGR over 2025-30E, China taking 50%-plus market share. Currently, humanoids (Rmb3-8.5bn/US\$0.4-1.3bn market size) account for only a small part of China's embodied AI market (Rmb1trn/US\$148bn) in China, but are expected to grow rapidly. [JPM Industrial team expects](#) global shipments of humanoids to rise from 18,000 units in 2025 to 60,000 in 2026 and a projected 1.75mn by 2030. In terms of key milestones to monitor on commercial adoption, we think users can prioritize measurable productivity gains, and unit cost is the core determinant of adoption speed. [TMT Post](#) estimates that when the annual cost of usage lowers to Rmb80k – equivalent to the average cost of a manufacturing worker – humanoids will see commercial viability. ASPs of some of the most popular models (Figure 9) feasible for commercial/industrial usage are still 5x-8x the average labor cost. Growth will likely accelerate as component costs decline, AI training datasets expand, and battery density improves. Industrial and service deployments will lead adoption, while home use remains constrained by price sensitivity and safety concerns.

- **Upstream components & equipment account for the bulk of value capture.** The humanoid robot ecosystem can be divided into perception, planning, and execution layers (Figure 4), and include sensor suppliers, AI software developers, semiconductor suppliers, battery systems, actuator manufacturers, system integrators, and end-user enterprises. Hardware currently captures most of the value, driven by actuator complexity, battery density requirements, and precision control systems. According to [local news](#), the execution layer accounts for 50%-65% of the bill of material (BOM), the perception layer and the planning layer account for 10-20% of BOM each, and the rest goes to the battery

system. As the industry scales, we believe hardware will gradually commoditize, with localization helping to drive the cost down. [Sina reported](#) that [planetary roller screws](#) (accounting for 22% of BOM, with a localization rate of 40-50%), and [six-axis force sensors](#) (accounting for c10% of BOM, with a localization rate of less than 30%) are two areas with the most localization prospects. This is also supported by analysis of 2026/27 financials (Figure 17-Figure 19), **showing that Chips, bearings, materials and force sensors stand out on a stronger combination of revenue/profit growth and net margin**, outperforming downstream OEMs, solution providers, and foundation model players. In addition, high-performance cutting tools should also benefit from the harmonic drive's fast localization, with domestic front-runner Leader Drive (accounting for 60% of domestic market share) [noting](#) an order pipeline extending into 2027.

- **China taking the lead on the execution layer.** China has established significant engineering advantages in the “cerebellum” (motion control and real-time coordination) segment of the humanoid robot industry chain, and is accelerating technological catch-up in the “cerebrum” (advanced decision-making and cognition) domain. Leveraging its mature supply chain system and cost advantages, according to TMT post, China has driven down the cost of joint modules to Rmb299 through mass production, with core component costs 30%-40% lower than those in Europe and the US, markedly enhancing the cost-effectiveness and accessibility of motion control systems. Ideally, expanding shipment scale, which generates real-world data, should in turn fuel model iteration and unlock new application scenarios, potentially transforming hardware vendors into platform companies.
- **Domestic policy support to accelerate commercial validation.** China's policy framework is moving from high-level strategic support to implementation, with intelligent robots and embodied intelligence embedded in the 15th FYP agenda, the “[Six Networks](#)” infrastructure buildout providing compute, connectivity, energy and logistics foundations, and MIIT/SASAC's 2026 real-scenario training action encouraging deployment in industrial, service and specialized use cases. Alongside data-policy support and a nationwide robot-training network, China is building the infrastructure to turn physical-world deployment into a data flywheel. Over the next 5-10 years, this could help the industry move from specialized robots toward more general embodied AI systems, supporting broader commercialization across manufacturing, services, healthcare, education, elderly care and public safety (see Figure 22 for major government backed robotics industry funds).

Figure 1: Humanoid event catalysts through end 2026

Top 5 questions asked about the China physical AI

1. What are physical AI, embodied AI, and humanoid robots?

Physical AI and embodied AI are often used interchangeably by the investment community, with both referring to AI moving from the digital world to the physical world, but physical AI used more when discussing industry applications, and embodied AI focusing on the ideology of closed loop of perception, action, and feedback.

- According to the [Ministry of Industry and Information Technology \(MIIT\)](#), the core objective of physical AI is to promote the deep integration of AI technology with the real economy, reshape labor structures, enhance industrial productivity, and provide physical carrier support for the path toward Artificial General Intelligence (AGI).
- [MIIT](#) defines embodied AI in relevant policy documents as a frontier direction of AI development and an important pathway for achieving the leap from perceptual intelligence to cognitive intelligence.

Humanoid robots represent a complex carrier form on the embodied AI. They mimic human body structure, including bipedal locomotion, dexterous hand, and head-based perception systems. Since human work and living environments are designed for human body morphology, humanoid robots possess the strongest environmental adaptability and task versatility.

- [MIIT data](#) shows that as of the first half of 2026, China has developed over 400 humanoid robot models, accounting for more than half of the global total, fully reflecting the momentum and technical complexity of this field.
- [MIIT](#) projects that China's annual humanoid robot production will exceed 100,000 units in 2026, marking that this field is moving from the laboratory sample stage to mass production.

Figure 8: Market size of embodied AI, intelligent robots and humanoid in China

2. How does China promote embodied AI and humanoid robots?

Under China's 15th FYP, intelligent robots are designated as one of the six emerging pillar industries, while embodied intelligence is listed among six future industries.

The national initiative on “[Six Networks](#)” infrastructure, worth over Rmb7trn this year, delivers computing power, connectivity, energy supply and logistics to underpin large-scale development of humanoid robots and embodied intelligence.

- In February 2026, MIIT released the *Humanoid Robot and Embodied AI Standard System (2026 Edition)*, which is China's first top-level standard design covering the entire industry chain and full lifecycle, laying the foundation for standardized industrial development.
- In June 2026, MIIT and SASAC jointly launched the “2026 Special Action for Real-Scenario Training of Humanoid Robots and Embodied AI”, focusing on key scenarios in industrial, service, and specialized fields, and accelerating large-scale industrial development through normalized deployment and application in real production and living environments.
- The “Action Plan for High-Quality Industry Dataset Construction” released by the National Data Administration (NDA) includes real-machine interaction data for embodied AI in the scope of key support, providing guarantees for industrial development from the data element level.

Figure 10: China's humanoid development roadmap

Timeframe	Industry Stage	Key Milestone/Target
2024	Low-volume validation	AgiBot and other leaders initiate scaled production
2025	Capacity ramp-up	Global shipments of c17k units, China accounts for 85%; AgiBot and Unitree surpassed 5k units each
2026	Mass production Year 1	Annual output expected to exceed 100k unit (5x y-y); AgiBot and Unitree break 10k-unit mark
2027	Pre-scale deployment	Mainstream models' ASP drop to Rmb80k-120k; industrial use cases accelerate validation; 10k-unit capacity becomes standard practice
2028	Scaled deployment in verticals	Auto manufacturing and other verticals begin batch deployment, with leading companies approach financial breakeven

Source: [Worldjournal.com](#) (8 Jun 2026), CLS ([7 Aug 2026](#) and [28 Jun 2026](#))

Figure 11: Humanoid robot shipment forecasts

	2025E	2026E	2027E	2028E	2029E	2030E
China (in k units)	15	50	120	280	550	900

3. Technology path: What's powering China's training flywheel for physical intelligence?

Real-world deployment is becoming China's core training engine for embodied AI.

China's embodied AI development is built around a "human teaches robot" model. Rather than relying solely on reinforcement learning, robots learn through teleoperation demonstrations and deployment in real-world environments such as factories, warehouses, and service settings. This enables firms to rapidly accumulate high-quality operational data and build a closed loop of real-world training → data collection → model improvement → commercial deployment.

A dual-track simulation-to-real approach helps shorten the path from R&D to commercialization. China combines the efficiency of virtual simulation with the realism of physical environments through a dual-track training system. Robots first practice millions of times in simulation to acquire basic skills at low cost, then fine-tune and validate those capabilities in real-world settings. This accelerates model training while keeping output practical and deployable.

Domestic compute is reinforcing China's push toward a self-sufficient physical AI stack. China is building a more self-reliant Physical AI ecosystem, supported by domestic compute platforms such as Huawei Ascend, national AI computing centers, and dedicated robot training facilities. The strategic objective is not only to provide sufficient training capacity for embodied AI models, but also to establish an integrated ecosystem spanning compute → training platforms → AI models → robots.

A nationwide robot-training network could become a key competitive advantage. China is scaling beyond individual robot companies to build foundational infrastructure for physical AI. Shanghai's Kylin training ground currently hosts 100+ robots and targets >1,000 by 2027, while Beijing and Hangzhou have deployed 120+ and 130+ robots, respectively, across dozens of real-world training scenarios. Alongside emerging regional centers across Henan, Guangdong, and Shandong, China is creating a nationwide robot-training network that functions as a "data factory" for embodied AI. As cloud infrastructure enabled the rise of LLMs, we believe this emerging Physical AI infrastructure stack could become a key competitive advantage by accelerating data accumulation, model iteration, and large-scale commercialization.

Figure 12: China's domestic intelligent computing power has risen sharply

Source: MIIT (06 Jun 2026).

Figure 13: AI training infra: Shanghai aims to ramp up the capacity by ~10x in 2027 vs. 2026

Source: MIIT (06 Jun 2026).

4. Social impact: Will physical AI displace workers or create new opportunities?

Physical AI will reshape labor markets, but structural mass unemployment is not the base case. Automation will likely replace some repetitive, high-intensity roles in manufacturing, logistics, and services, particularly among lower-skilled workers. However, history suggests technological progress tends to transform employment structures rather than permanently eliminate work at scale. In China, the impact may be more manageable given population aging, labor shortages, and rising demand for higher-skilled industrial talent.

The core employment shift is from human operators to robot supervisors. As embodied AI systems scale, workers are likely to move from direct manual execution toward robot programming, monitoring, debugging, maintenance, and fleet management. This transition could improve productivity, reduce physical labor intensity, lower occupational safety risks, and support better-quality jobs. At the same time, it will require large-scale reskilling to help workers adapt to more technical roles.

New robot-related occupations and talent systems are becoming critical enablers of commercialization. China is formalizing career pathways such as embodied AI robot application technicians, AI engineering personnel, industrial robot operation and maintenance staff, AI trainers, and service robot application technicians. The sector still faces a sizable talent gap across R&D, application engineering, operations, and cross-disciplinary roles. To address this, China is building a multi-level training system across universities, vocational schools, enterprise programs, and local talent bases such as Hubei's Optics Valley.

Social governance will determine whether physical AI scales safely and inclusively. As robots enter factories, homes, schools, hospitals, and public spaces, safety, data privacy, accountability, military-use ethics, and human-machine relationships will become increasingly important. China will need stronger standards, compliance frameworks, privacy protections, reskilling policies, and social safety nets to manage the transition. If handled well, physical AI could raise productivity, offset labor shortages, create higher-value jobs, and support broader social progress.

5. Conclusion and outlook: Can China move from fast follower to global leader in physical AI?

China's physical AI advantage rests on policy coordination, manufacturing depth, pragmatic training, and market scale. China has elevated embodied AI into its national strategic agenda, with top-level support, local action plans, and real-scenario training initiatives coordinating with government, industry, and research. Its robotics manufacturing base has scaled rapidly, supported by output growth, export momentum, and leadership in areas such as quadruped and humanoid robots. Instead of relying only on end-to-end black-box models, China is pursuing a practical route combining teleoperation, real-world data, simulation, and domestic compute.

The next challenge is moving from scale expansion to high-quality industrial leadership. Despite progress, China still faces gaps in high-end core technologies, including precision reducers, servo motors, advanced sensors, foundational algorithms, and high-performance AI chips. Many domestic robotics firms remain stronger in mid- to low-end applications, while global leaders still dominate parts of the premium market. In humanoid robots, product launches are accelerating, but large-scale commercialization and differentiated competitiveness remain limited.

Social transition, safety, and governance will be critical to adoption. Physical AI can help address labor shortages, improve productivity, and shift employment from manual operation to robot supervision, programming, maintenance, and management. However, the transition could pressure lower-skilled workers, requiring stronger training, re-employment support, and social safety nets. As robots enter broad adoption, China will need stronger frameworks for safety, data privacy, accountability, military-use ethics, and human-machine interaction.

Over the next 5-10 years, China's physical AI industry could move from specialization toward generalization. Progress will likely be driven by more capable embodied models, improved VLA (Vision-Language-Action) systems, broader real-world training networks, and deeper integration across manufacturing, services, healthcare, education, elderly care, and public safety. China's leadership path in physical AI industry depends on closing technology gaps, strengthening original innovation, and building globally competitive companies. If successful, physical AI could become a key pillar of China's next industrial upgrade and a driver of productivity growth.

Analyst Certification: The Research Analyst(s) denoted by an “AC” on the cover of this report certifies (or, where multiple Research Analysts are primarily responsible for this report, the Research Analyst denoted by an “AC” on the cover or within the document individually certifies, with respect to each security or issuer that the Research Analyst covers in this research) that: (1) all of the views expressed in this report accurately reflect the Research Analyst’s personal views about any and all of the subject securities or issuers; and (2) no part of any of the Research Analyst’s compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the Research Analyst(s) in this report. For all Korea-based Research Analysts listed on the front cover, if applicable, they also certify, as per KOFIA requirements, that the Research Analyst’s analysis was made in good faith and that the views reflect the Research Analyst’s own opinion, without undue influence or intervention.

All authors named within this report are Research Analysts who produce independent research unless otherwise specified. In Europe, Sector Specialists (Sales and Trading) may be shown on this report as contacts but are not authors of the report or part of the Research Department.

Important Disclosures

Company-Specific Disclosures: J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Important disclosures, including price charts and credit opinion history tables (if applicable), are available for compendium reports and all J.P. Morgan-covered companies, and certain non-covered companies, by visiting <https://www.jpmm.com/research/disclosures>, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst’s, or the Research Analyst’s team’s, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst’s, or the Research Analyst’s team’s, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst’s, or the Research Analyst’s team’s, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst’s, or the Research Analyst’s team’s, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock’s expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts’ coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst’s coverage universe can be found on J.P. Morgan’s Research website, <https://www.jpmorganmarkets.com>.

J.P. Morgan Equity Research Ratings Distribution, as of July 04, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	36%	12%
IB clients**	83%	80%	73%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	92%	87%

*Please note that the percentages may not add to 100% because of rounding.

**Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.

For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at <http://www.jpmorganmarkets.com>, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, <http://www.jpmorganmarkets.com>. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of <http://www.jpmorganmarkets.com> where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to [UK MIFID Research Unbundling exemption](#) for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Any digital or crypto assets discussed in this research report are subject to a rapidly changing regulatory landscape. For relevant regulatory advisories on crypto assets, including bitcoin and ether, please see <https://www.jpmorgan.com/disclosures/cryptoasset-disclosure>.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit <https://www.theocc.com/components/docs/riskstoc.pdf> for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

Material relating to equity securities is issued and distributed in Taiwan by J.P. Morgan Securities (Taiwan) Limited, subject to the license scope and the applicable laws and the regulations in Taiwan. **To the extent that J.P. Morgan Securities (Taiwan) Limited produces research materials on securities not listed on the Taiwan Stock Exchange or Taipei Exchange (“Non-Taiwan Listed Securities”), these materials shall not constitute securities recommendations for the purpose of applicable Taiwan regulations, and, for the avoidance of doubt, J.P. Morgan Securities (Taiwan) Limited does not act as broker for Non-Taiwan Listed Securities.** According to Paragraph 2, Article 7-1 of Operational Regulations Governing Securities Firms Recommending Trades in Securities to Customers (as amended or supplemented) and/or other applicable laws or regulations, please note that the recipient of this material is not permitted to engage in any activities in connection with the material that may give rise to conflicts of interests, unless otherwise disclosed in the “Important Disclosures” in this material.

Thailand: This material is issued and distributed in Thailand by JPMorgan Securities (Thailand) Ltd., which is a member of the Stock Exchange of Thailand and is regulated by the Ministry of Finance and the Securities and Exchange Commission. The registered address is 548 One City Center Building, 50th Floor, Ploenchit Road, Lumpini, Pathum Wan, Bangkok 10330.

UK: Research is produced in the UK by J.P. Morgan Securities plc (“JPMS plc”) which is a member of the London Stock Exchange and is authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or J.P. Morgan Markets Limited (“JPML Ltd”) which is authorised and regulated by the Financial Conduct Authority. Unless specified to the contrary, this material is distributed in the UK by JPMS plc and is directed in the UK only to: (a) persons having professional experience in matters relating to investments falling within article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) (Order) 2005 (“the FPO”); (b) persons outlined in article 49 of the FPO (high net worth companies, unincorporated

associations or partnerships, the trustees of high value trusts, etc.); or (c) any persons to whom this communication may otherwise lawfully be made; all such persons being referred to as "UK relevant persons". This material must not be acted on or relied on by persons who are not UK relevant persons. Any investment or investment activity to which this material relates is only available to UK relevant persons and will be engaged in only with UK relevant persons. A description of J.P. Morgan EMEA's policy for prevention and avoidance of conflicts of interest related to the production of Research can be found at the following link: [J.P. Morgan EMEA - Research Independence Policy](#).

U.S.: J.P. Morgan Securities LLC ("JPMS") is a member of the NYSE, FINRA, SIPC, and the NFA. JPMorgan Chase Bank, N.A. is a member of the FDIC. Material published by non-U.S. affiliates is distributed in the U.S. by JPMS who accepts responsibility for its content.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.
