

Software

C3Q EPS Preview: Expect Continued Share Price Recovery; Infra S/W Led by Est. Revisions and App S/W Led by Re-rating; Favor MSFT, NOW, NET and SNOW; D/g HUBS

We are heading into C3Q earnings with a much better backdrop in the industry relative to some of the recent quarters, with the software index IGV up 21% since the end of June with the appreciation across both Application and Infrastructure software. While on a YTD basis, share prices of Infrastructure software companies have outperformed both Application software and AI infrastructure builders materially, since the end-of-June we have witnessed a broader recovery in share prices across the group with both Application Software and Infrastructure Software re-rating modestly. As we look forward to the end of the year, we expect the broader recovery in the software sector index to continue with upsides to Application Software company share prices more likely to be driven by re-rating of valuation multiples as fundamentals prove to be more resilient than priced in by low investor expectations on account of AI disruption threats, while for Infrastructure software companies we expect share prices upsides to be driven by positive estimate revisions helped by AI-led secular tailwinds to revenue despite the backdrop of rich valuation multiples already for Infrastructure S/W companies. On the flip-side, we expect shares for AI infrastructure builders to likely remain constrained on the valuation multiple with investor concerns currently more macro-driven, including election outcomes and rising interest rates, despite an improvement in fundamentals in relation to both stronger demand and pricing. Within Infrastructure software companies, we favor the near-term setups for Snowflake and Cloudflare into the upcoming earnings print on expectations of strong beat on account of AI-led tailwinds, and within Application Software we favor Microsoft and ServiceNow where we expect acceleration and stabilization of growth respectively, as well as improved AI monetization, to support share prices.

- **Software group picking up momentum since end of June.** The broader software group and the IGV index have rallied significantly since the end of June, up 21% since the end of June relative to the broader S&P up 4%. Surprisingly, while Infrastructure software companies, including Twilio, Datadog, Cloudflare and Snowflake have led the group in share price performance on a YTD basis, the stronger share performance since June is more attributable to the Application software companies where investors have, in the past, expressed greater consternation around AI disruption, including Paycom, DocuSign, Workday, Salesforce and Microsoft.
- **Expect broader share price recovery to continue.** Heading into C3Q

See page 31 for analyst certification and important disclosures.

earnings, we expect the broader share price momentum for the group to continue with Infrastructure software companies leading the way on account of the AI-led tailwinds driving robust beats on both top-line and earnings, albeit potentially only in line on gross margins. We expect Application software companies to also participate in the positive share price momentum for the sector into the year-end on account of raises to full-year guides, aided by building momentum in AI monetization, which is steadily building as incremental revenue on top of the core businesses, which range from modestly decelerating to stable growth across our coverage companies; however, the expected positive share price performance has more to do with the low bar of expectations still embedded in the current valuation backdrop.

- **For Microsoft**, based on our latest check with a major global channel partner (see [report](#)), we expect another quarter of robust increase in Copilot seat adds equaling or better than the ~10M seat adds last quarter, although we expect the monetization levers from the same to still be modest and build over time, implying that the upside to expectations of M365 Commercial Cloud growth is still modest but delivering to the promise of acceleration in growth. **For ServiceNow**, latest partner conversations point to robust growth close to ~20% driving our confidence in beats in relation to business momentum to support a cRPO beat of a magnitude similar to last quarter of ~200 bps. Additionally, we expect the company to further raise its AI ACV target beyond the \$1.5B outlined already.
- **For Snowflake**, despite the high expectations embedded in its premium valuation, we expect to see upside to estimates from an accelerated pace of migrations continuing to support robust beats. We expect beats to the F3Q revenue guide to be accompanied by expectations for further acceleration in growth in F4Q27 on largely similar comparables from a year ago, helped by acceleration in migrations driving a significant portion of the upsides, as well as contributions from AI-led revenues. **For Cloudflare**, we believe the first three acts to combine to drive acceleration of revenue to the high-30% range on a y/y basis supported by acceleration in sequential growth. While the premium valuation multiple will present a high hurdle of expectations, the drivers that support it are an increase in contribution of revenue from Workers, along with an acceleration in growth in the core business on account of the need for both security and network performance to support an acceleration in demand from AI-led companies.

Broader Share Price Recovery in S/W Likely to Continue with C3Q Earnings

Broader rally in the group has helped multiples across both Infrastructure and Application Software

As shown in the Figure below, the broader software group and the IGV index have rallied significantly since the end of June, up 21% since the end of June relative to the broader S&P up 4%.

The momentum has rubbed off on our coverage stocks, with share prices for 21 of the 24 companies in our coverage higher over the same time. Surprisingly, while infrastructure software companies, including Twilio, Datadog, Cloudflare and Snowflake have led the group in share price performance on a YTD basis, the stronger share performance since June is more attributable to the Application software companies where investors have, in the past, expressed greater consternation around AI disruption, including Paycom, DocuSign, Workday, Salesforce and Microsoft.

Figure 1: Share Price Performance Since End of June

Valuation multiples improving across both Application and Infrastructure software

The broader rally has in part been helped by a multiple re-rating across Infrastructure and Application Software companies, although the divergence in the multiples between Infra and Apps Software has largely been maintained. The re-rating across both sub-groups implies that the stronger share price performance for Infrastructure software companies relative to Apps software companies has more to do with the positive estimate revisions for Infra software companies rather than the appreciation in the

valuation multiple alone.

Figure 2: EV / Revenue Multiples for Both Infra and Apps are Improving

Chart shows median EV/NTM revenue multiples for selected application and infrastructure software companies, 1/1/2026–10/5/2026. Company classifications (application vs. infrastructure) are subjective and reflect the author's judgment. Not all constituents were publicly traded for the full period - companies are included based on availability of data for the given date. Application: ADBE, ADSK, AI, ALKT, AMPL, APPF, APPN, ASAN, AVPT, BBAI, BILL, BL, BOX, BRZE, BSY, CDNS, CERT, CRM, CWAN, CXM, DBX, DOCU, DOMO, DV, FIG, FIVN, GTM, HUBS, IAS, INOD, INTU, KVYO, MNDY, NICE, NOW, PAYC, PEGA, PHR, PTC, RAMP, RNG, SAP, SHOP, SOUN, SPT, TEAM, TOST, U, VEEV, VERX, VRNT, WAY, WDAY, WIX, YEXT, ZETA, ZM. Infrastructure: AKAM, CHKP, CRWD, CRWV, CYBR, DDOG, DOCN, DT, ESTC, FROG, FTNT, GTLB, MDB, NBIS, NET, OKTA, ORCL, PLTR, SAIL, SNOW, VRSN, ZS
Source: Bloomberg Finance L.P.

Sentiment on AI infra builders has turned materially weaker in the last few months

As shown in the comparison of the share price performance between YTD and the last few months, share prices of the AI infrastructure builders including CoreWeave, Oracle and Akamai have significantly underperformed in the last few months, even as the YTD performance has been more mixed across the sub-groups. The sentiment for AI builders is driven by recent investor concerns around rising cost of capital with higher interest rates, as well as IRR modestly exceeding WACC rather than materially clearing it, even as fundamentals have improved in relation to both demand and pricing for compute.

Figure 3: YTD Share Price Performance

Price Performance as of 10/5/2026.

Figure 4: Share Price Performance Since June 30, 2026

Price Performance as of 10/5/2026.
Source: Bloomberg Finance L.P.

Infrastructure software has outperformed, but also implies tougher hurdles to clear into C3Q earnings

As shown below, within the broader outperformance of all infrastructure (software and AI builders) companies, the outperformance has largely stemmed from Infrastructure Software companies which are now up 78% YTD and 34% since end-of June. On the flipside, median share price of the AI infrastructure builders has declined 8% since the end of June, although still accruing modest gains on a YTD basis.

The significant outperformance in the median share prices of Infrastructure Software companies has been driven by earnings upgrades, and we expect continued estimate revisions to broadly drive the share price performance out of the C3Q print for Infra S/W companies.

Figure 5: YTD Infra Share Price Performance

Charts show median stock price returns for selected infrastructure software companies, 12/31/2025-10/5/2026. AI Infrastructure Stocks include AKAM, CRWV and ORCL. Infrastructure Software Stocks include DDOG, DT, NET, SNOW and TWLO.
 Source: Bloomberg Finance L.P.

Figure 6: Infra Share Price Performance Since June 30

Charts show median stock price returns for selected infrastructure software companies, 6/30/2026-10/5/2026. AI Infrastructure Stocks include AKAM, CRWV and ORCL. Infrastructure Software Stocks include DDOG, DT, NET, SNOW and TWLO.
 Source: Bloomberg Finance L.P.

Apps Software is starting to participate in the rally, including Large-Caps

While investor consensus is largely focused on owning *infrastructure software* companies with AI-led tailwinds to their businesses, the change in sentiment for broader software has started to help large-cap application software, including Microsoft, Salesforce, and ServiceNow. As shown below, while the large-cap application software companies are still down on a YTD basis, and still underperforming the IGV index YTD, the three large-cap application software companies are up 42% relative to the IGV up 21% since June.

Figure 7: YTD MSFT/CRM/NOW vs. IGV

Charts show average stock price returns for MSFT/CRM/NOW as well as the IGV index, 12/31/2025-10/5/2026.

Charts show average stock price returns for MSFT/CRM/NOW as well as the IGV index, 6/30/2026-10/5/2026.

Source: Bloomberg Finance L.P.

**Infra software requires significant beats to surpass higher expectations;
 Application software and AI Infra need resilient fundamentals relative to a low bar**

Even though the positive momentum across share prices has started to broaden out across our coverage companies, the bar for expectations is materially different for Infrastructure software relative to Application software and AI infrastructure builders. The high bar of expectations for Infra Software and the strong share price performance leads us to expect that the magnitude of the beats relative to expectations must be similar or better than recent quarters; on the flip-side, although sentiment has modestly improved for Application software, we believe resilient fundamentals with modest beats are enough to drive positive revisions in organic growth expectations in the out-years and will support positive share price outcomes from earnings.

As shown below, the average revenue beat for Infrastructure Software companies last quarter was about ~4% vs. 1% for Application software companies.

Figure 9: Average Revenue Beat Last Quarter

Source: J.P. Morgan.

Expect positive momentum to continue for Software, although AI builders will likely need more macro help as catalysts

Heading into C3Q earnings, we expect the broader share price momentum for the group to continue with Infrastructure software companies leading the way on account of the AI-led tailwinds driving robust beats on both top-line and earnings, albeit potentially only in line on gross margins. We expect Application software companies to also participate in the positive share price momentum for the sector into the year-end on account of raises to full-year guides, aided by building momentum in AI monetization, which is steadily building as incremental revenue on top of the core businesses, which range from modestly decelerating to stable growth across our coverage companies; however, the expected positive share price performance has more to do with the low bar of expectations still embedded in the current valuation backdrop.

Relative to the Infra and Apps S/W groups, we expect AI infrastructure builders to potentially need more help relative to company-specific fundamentals alone to participate in the rally, with primary investor concerns currently relating to both the outcome of the midterm elections, as well as rising interest rates.

Setup for key coverage names into C3Q earnings

Favor Microsoft and ServiceNow in Application Software into C3Q earnings

Despite the broader rally across Software companies helping MSFT and NOW shares in recent months, including positive share price reactions following the last print, we believe the setup for both companies into C3Q earnings remains positive given the low bar embedded in investor expectations.

For Microsoft, based on our latest check with a major global channel partner (see [report](#)), we expect another quarter of a robust increase in Copilot seat adds equaling or better than the ~10M seat adds last quarter, although we expect the monetization levers from the same to still be modest and build over time, implying that the upside to expectations of M365 Commercial Cloud growth is still modest but delivering to the promise of acceleration in growth. Additionally, we expect the company to reiterate expectations for acceleration in M365 Commercial Cloud through FY27 (ending June), although monetization associated with the strong growth in Copilot seat adds are likely to support larger beats to expectations in the coming quarters. Relative to Azure, we expect the company to outperform outlined expectations for 43-44% y/y growth on a reported basis, helped by strong execution, and the company to outline expectations for continued acceleration in growth through the year, while at the same time guiding to a continued step up in capex to support revenue growth, including our expectations for a guide for \$210B of capex in FY27E.

For ServiceNow, latest partner conversations point to robust growth close to ~20% driving our confidence in beats in relation to business momentum to support a cRPO beat of a magnitude similar to last quarter of ~200 bps. Additionally, we expect the company to further raise its AI ACV target beyond the \$1.5B outlined already. We expect revenue upsides to support margin beats led by incremental operating leverage, driving an upward revision to FCF expectations and support a higher valuation despite a valuation multiple that is likely to remain under pressure until the stabilization starts to show signs of acceleration. Our expectation of a 200 bps beat on cRPO translates into reported cRPO growth in the low-20% range and organic cRPO growth closer to 19%, implying stabilization in organic growth for the business.

For Salesforce, we expect the F3Q (October-end) print to deliver organic revenue acceleration that management has outlined for a few quarters, supported by net new AOV outpacing AOV growth since F3Q26, record pipeline, and lengthening contract durations across segments. We also expect continued scaling in Agentforce ARR (\$1.5B in F2Q, including Slackbot), with the new Core/Advanced/Max editions supporting the premium upgrade motion. Our partner conversations at Dreamforce were constructive, with partners viewing the simplified edition structure as easing tier conversations with customers and, notably, were more enthused by Claudeforce as a catalyst for new customer projects. Although reported cRPO should also benefit optically from the Contentful and Fin closings, the limited quantification of FY28 outlook beyond the qualitative outlook for two years in “the \$50Bs” at Dreamforce will drive investors to scrutinize the organic cRPO trajectory, which we expect will benefit from the conversion of a higher portion of the installed base to premium Max subscriptions (implying a ~3x uplift relative to Core seats) to put the company on course for healthy double-digit organic cRPO growth in FY28.

For Figma, we forecast another robust beat relative to the guidance for revenues in the range of \$373-375M (JPMe of \$387M) on account of continued robust NRR as well as

new customer adoption, although at the same time we expect gross margins to remain constrained on account of limited monetization for new AI led products which are still in Beta trial with customers, or only just starting to get monetized. However, despite the beat expected for F3Q26, we believe the outlook for F4Q26 will remain conservative on account of 1) limited data still on monetization of new AI features (like Figma Weave) going into GA as well as other AI features (like Figma Agents) still in Beta trials; 2) lapping the benefit of price increases last year, which will be an increasing headwind into F1Q27E. We are updating our Figma estimates in conjunction with this report; our Dec-27 price target is unchanged.

Favor Snowflake and Cloudflare in Infrastructure Software; Twilio and Datadog have to surpass high expectations

For Snowflake, despite the high expectations embedded in the premium valuation, we expect to see upside to estimates from an accelerated pace of migrations continuing to support robust beats. We expect beats to the F3Q revenue guide to be accompanied by expectations for further acceleration in growth in F4Q on largely similar comparables from a year ago, helped by an acceleration in migrations driving a significant portion of the upsides as well as contributions from AI-led revenues. While the revenue momentum is likely to support operating margin and FCF upsides, we believe gross margins will largely track in line with expectations, for flat to modest declines. While the magnitude of the revenue beat last quarter might drive a high bar of expectations, we expect the bigger driver of the stock price to be the acceleration in y/y growth rates for the company in both F3Q and F4Q guidance.

For Cloudflare, we believe the first three acts will combine to drive acceleration of revenue to the high-30% range on a y/y basis supported by acceleration in sequential growth. While the premium valuation multiple will present a high hurdle of expectations, the drivers that support it are an increase in contribution of revenue from Workers along with an acceleration in growth in the core business on account of the need for both security and network performance to support an acceleration in demand from AI-led companies. We expect revenue upsides to support margin and cash flow upsides to support higher expectations from investors for the out-years and support the share price despite the premium valuation. We remain Neutral rated on Cloudflare on account of lower visibility of Act IV monetization, which has in part driven significant investor enthusiasm and re-rating of the shares.

For Twilio, while we expect the magnitude of the revenue beat to continue to surprise positively, led by strong adoption of the company's messaging platform, we are cautious around the high expectations heading into the print following a strong move in the share price following the last earnings print. The proliferation and adoption of messaging and communication platforms by large Enterprise customers as well as AI native companies is driving expectations for acceleration in the growth drivers for the company into the out-years, although we don't expect any material shift in the magnitude of beats in the coming quarter on account of the fundamental drivers for long-term upside. Looking beyond the near-term quarters, we are raising our out-year estimates for growth for the company and our Dec-27 PT goes to \$335 from \$260 prior.

For Datadog, we expect growth to remain robust in the 30%+ range despite a slower growth outcome with the largest customer. Latest quarter results from the company have borne further proof of broad-based growth acceleration with customers, and we expect the same, in particular with rising demand for observability of agents to support

continued strong robust growth for the company; although we believe the premium multiple as well as the positioning with investors as a consensus long might challenge share price outcomes from the print.

For Dynatrace, we are modestly tweaking our estimates to reflect net new ARR in F2Q likely tracking modestly below F1Q following an exceptionally robust F1Q. While we do still perceive the company's implied guide for ARR for the year as conservative and likely to see upsides with net new ARR exceeding implied expectations, we are cautious in relation to the company repeating a robust increase in NNARR in F2Q following the significant increase y/y in F1Q for NNARR on a constant currency basis. Our Dec-27 PT remains unchanged.

Expect robust revenue and margin beats from AI infrastructure builders; although sentiment might not change significantly near-term

For the AI infrastructure builders in our coverage universe, including Akamai, CoreWeave, and Oracle, we believe the recent improvement in demand backdrop will feed into a more favorable pricing environment, implying opportunity for upsides in relation to both revenue and margins for specifically CoreWeave and Oracle. For Akamai, we expect timing of compute shipments could drive an in-line revenue outcome for both F3Q and F4Q, while margins could potentially be lower than expected on account of the temporary costs associated with the ramp in capacity. We expect the premium pricing for compute to support a raise to out-year estimates for the AI infra builders; however, sentiment in relation to investor ownership might be more driven by margin outcomes in the near-term as well as clearing events in investor perception, which could include assurance around cycling past near-term capital needs as well as macro events including US elections and interest rates (which impact cost of capital and the magnitude and headroom for companies in relation to IRR over WACC). In conjunction with this report, we are modestly tweaking our estimates for Akamai; our Dec-27 PT is unchanged.

HubSpot: Downgrading to Neutral as Uncertainties Around Growth Recovery Extend Into 2027; Restructuring and Reaffirmed Guidance Announced

We are downgrading HubSpot to Neutral from Overweight on account of an uncertain timeline for a recovery in revenue growth, with headwinds in relation to growth from a delay in monetization of AI relative to management's prior expectations more likely to be a medium-term driver of deceleration in company growth rather than temporary in nature. Although the organically built platform has an ease-of-use advantage vs. competitors with inorganic systems bolted on to the core platform, and prioritization of AI adoption over immediate monetization appears to be the right long-term strategy, we expect the medium-term drivers of revenue to remain challenged by the long buying cycles as well as customer indecision on which AI capabilities will deliver ROI. We expect the uncertainty and the slower monetization to drive growth deceleration in the medium-term for a company that has been able to outperform CRM peers historically in relation to growth (though it remains at a significantly lower scale relative to larger competitors), raising concerns around moderation in pace of share expansion.

Levers to drive adoption to be a headwind to growth medium-term. The levers being pulled to drive adoption are also likely to weigh on monetization, at least in the

near-term, including reduction in half of Customer Agent pricing (from \$1 per conversation to 50c per resolution, which in reality is a >50% pricing cut since Customer Agent resolves 70% of conversations) alongside the move to outcome-based pricing, expanding the seats-and-credits pilot (which management expects to bring lower initial ASPs), and ramping 4Q downmarket promotions even as large Starter cohorts come up for renewal. Despite HUBS shares trading down more than 40% YTD, we don't expect investor interest to re-ignite and drive a meaningful re-rating until there are clear signs of the growth slowdown bottoming out as HubSpot's position in the market as an application software company primarily serving SMBs/ mid-market is perceived as facing relatively higher risks of AI-related headwinds and disruptions. We now model net-new ARR growth tracking below CC revenue growth beyond just FY26 and into FY27, leading us to move to the sidelines as we watch for signs of recovery. Our Dec-27 price target moves to \$240 from \$268, based on ~9x EV/uFCF, primarily driven by lower estimates.

Restructuring announcement bears further proof of limited recovery in net new ARR growth. Earlier this week, HubSpot announced a restructuring, which eliminates ~7% of the workforce (~660 roles) with \$65-75M of charges to impact 4Q26, alongside a reaffirmation of 3Q and FY26 guidance, noting it remains confident in its longer-term operating margin targets shared at its Analyst Day last month. Reaffirming guidance after quarter-end suggests 3Q is tracking at least in line, which we view as limiting the risk of a further near-term step-down rather than as a signal of recovery. The reorganization is intended to organize product teams around customer outcomes as opposed to Hubs and features and remove management layers. In our view, there is some risk of disruption to execution in 4Q, which is a seasonally important quarter for new business, renewals and upmarket deals, as role eliminations run through 1Q27. A re-rating will require a recovery in new customer additions and evidence that AI credit consumption is translating into incremental revenue, which we expect to take some time.

Investment Thesis, Valuation and Risks

Akamai Technologies, Inc. (Neutral; Price Target: \$167.00)

Investment Thesis

Akamai is an established content delivery network (CDN) provider undergoing a business transition to focus its efforts on its Cloud Infrastructure Services (CIS) segment, as well as its Security segment to position itself to benefit from multiple avenues of AI tailwinds. The company operates the world's largest distributed edge network, which was originally architected to serve its Delivery business, but now serves as one of the key advantages underpinning the argument for the long-term durability of Akamai's Inference Cloud service, which can handle inference requests under steep latency-sensitive requirements at scale and at attractive costs for customers. Akamai anticipates seeing 'hockey stick growth' in its CIS business beginning in F4Q26, benefiting from significant revenue recognition in relation to its large, committed capacity compute deals signed in 2026. While the company is seeing meaningful growth in its emerging Security products such as API Security & Guardicore Segmentation Solutions with broad-based AI adoption serving as an accelerant, its cloud business has yet to prove execution at scale and the AI inference-led growth vectors are still nascent in aggregate, leading us to believe that a further re-rating from current levels will be led by execution on the opportunity. We rate Akamai Neutral.

Valuation

We are maintaining our Dec-27 price target of \$167, which is based on a ~19x CY28 EV/PF Operating Income multiple, with the target multiple modestly below the previously leveraged 20x, on account of near-term margin headwinds from the ramping of large CIS deals and macro headwinds for AI infra builders broadly.

Figure 10: EV/Operating Income Valuation Analysis for Akamai

Units in millions

Price Target Math	2027E	2028E
Pro-Forma Op Inc	1,067	1,781
EV/Op Inc Multiple	22.4x	
Target EV/Op Inc Multiple		19x

Memo:		
Implied EV/Revenue		4.7x
Implied EV/EBITDA		10.0x

Source: J.P. Morgan estimates, Bloomberg

Risks to Rating and Price Target

Industry Upside Risks

Market pricing for AI compute could remain stronger than expected. Continued supply constraints and robust demand for GPU capacity could support stronger-than-expected market pricing for compute. Greater-than-expected strength in pricing, particularly for on-demand inference workloads, could drive upside to our revenue and margin estimates.

Industry Downside Risks

Inference workloads could remain concentrated in centralized clouds. Improvements in active control, GPU observability, and traffic-routing solutions could allow centralized cloud providers to sufficiently address latency requirements for a broader range of inference workloads. Slower-than-expected migration of runtime-sensitive workloads toward distributed compute networks could limit demand for Akamai's differentiated architecture.

Company Upside Risks

Akamai could prove the criticality of its distributed architecture earlier than expected. Akamai's global edge network allows compute workloads to run closer to end users and stored data, reducing latency and other incremental costs associated with centralized compute clusters. Customer recognition of these benefits on a faster timeline than we currently anticipate could drive stronger demand, improved deal economics, and upside to our CIS estimates.

On-demand inference revenue could grow faster than expected. Akamai expects on-demand consumption to increase as a percentage of CIS revenue in the medium- to long-term as "real-world" enterprise AI use cases move into production. A faster-than-expected mix shift toward on-demand inference and monetization of attractive market pricing for GPU rentals could drive upside to our CIS revenue estimates.

Company Downside Risks

Slower-than-expected execution on committed capacity deployments. Our estimates assume a meaningful acceleration in CIS revenue beginning in F4Q26 as revenue recognition commences for large committed capacity agreements. Delays in GPU delivery, data center capacity coming online, or customer deployments in F4Q26 and beyond could push revenue recognition beyond our expectations and lead to downside to our estimates.

Weaker-than-expected CIS margins. Our valuation assumes Akamai delivers compute capacity at or above the cash gross margin and pro forma operating margin expectations provided by management. Lower utilization, weaker pricing, or higher-than-expected infrastructure costs could result in margins below our estimates and limit further multiple expansion.

Investment Thesis, Valuation and Risks

HubSpot (Neutral; Price Target: \$240.00)

Investment Thesis

We believe HubSpot remains a differentiated application software platform with an organically built architecture and ease-of-use advantage that continues to resonate with SMB and mid-market customers. However, we are hesitant to exhibit confidence in the timeline for a recovery in HubSpot's increasingly uncertain revenue growth, with delayed AI monetization, longer buying cycles, and customer indecision around AI ROI likely to weigh on net-new ARR growth over the medium term. While management's strategy to prioritize AI adoption over immediate monetization may support the long-term durability of the platform, the near-term levers being used to drive adoption are likely to pressure monetization and initial ASPs, limiting visibility into a growth re-acceleration for some time. We view the risk/ reward as balanced-to-slightly-negative at current levels and believe a more constructive view will require evidence of improving new customer additions, stronger AI-driven monetization, and a clearer path toward sustainable revenue growth recovery.

Valuation

Our Dec-27 price target of \$240 is based on an ~9x EV/CY28E uFCF multiple, a modest discount to the peer group on account of potential multiple compression due to deceleration in growth heading into CY27. Our CY28E uFCF estimate is ~\$1.1B.

Figure 11: EV/ uFCF Valuation Analysis for HubSpot

units in '000s

Price Target Math	2027	2028
Unlevered FCF	\$853,906	\$1,080,118
EV/ uFCF Multiple	11.4x	
Target EV / FCF Multiple		9x
Enterprise Value	\$9,707,925	\$10,153,105
Net Debt/ (Net Cash)	(\$1,486,207)	(\$1,964,324)

Implied Change		9%
Implied EV/ Revenue		2.1x
Implied P/E		11.6x

Source: J.P. Morgan estimates, Bloomberg

Risks to Rating and Price Target

Downside Risks

- **AI monetization and growth deceleration.** HubSpot's medium-term growth outlook depends on its ability to convert AI adoption into incremental revenue while customers assess the ROI of new AI capabilities. Should AI monetization remain delayed, credit consumption fail to translate into meaningful revenue, or customer indecision around AI-driven spend persist, then revenue growth and net-new ARR could remain under pressure.
- **SMB and mid-market demand sensitivity.** HubSpot primarily serves SMB and mid-market customers, where buying cycles can lengthen and purchasing decisions may be more sensitive to budget scrutiny, product complexity, and confidence in near-term ROI. Should new customer additions remain below historical levels, downmarket demand soften, or customers become more selective around incremental software spend, then HubSpot's growth recovery could take longer than expected.
- **Execution and GTM transition.** HubSpot is balancing organizational changes, evolving pricing and packaging models, and a product strategy increasingly oriented around AI-enabled customer outcomes. Should restructuring efforts disrupt sales execution, lower initial ASPs weigh on monetization, or go-to-market changes fail to improve conversion and expansion, then growth, profitability, and investor confidence could disappoint.

Upside Risks

- **AI adoption and monetization upside.** HubSpot's prioritization of AI adoption over immediate monetization could strengthen customer engagement and expand the platform's long-term revenue opportunity. Should AI usage scale meaningfully, customers demonstrate greater willingness to pay for outcome-based capabilities, or credit consumption convert into incremental revenue faster than expected, then HubSpot's growth trajectory and investor perception could improve.
- **Platform differentiation and share expansion.** HubSpot's organically built platform provides an ease-of-use advantage that can differentiate the company against competitors with more complex or less integrated product architectures. Should this platform advantage continue to resonate with SMB and mid-market customers and further expand into enterprise customer cohorts, enabling HubSpot to sustain share gains despite a competitive environment, then revenue growth could recover more quickly than expected.
- **Operating discipline and margin upside.** HubSpot has reiterated confidence in its longer-term operating margin targets while taking actions intended to simplify the organization and align product teams more closely with customer outcomes. Should the company execute well through organizational changes, sustain cost discipline, or realize greater efficiency from a more focused operating structure, then profitability and free cash flow could exceed expectations.

Investment Thesis, Valuation and Risks

Twilio (*Overweight; Price Target: \$335.00*)

Investment Thesis

Twilio enables developers to embed real-time communications, including SMS, voice, video, and authentication, directly into software applications, and has built strong developer mindshare through its self-service, developer centric model, supported by more than 10 million registered accounts and high-profile customers such as Uber, WhatsApp, and Airbnb. We believe Twilio is well positioned to continue benefiting from the growth of cloud, mobile, and application development as a leading public pure play CPaaS platform. While carrier costs structurally constrain gross margins, Twilio's low touch go to market model, limited professional services burden, and strong operating efficiency support an attractive growth plus margin profile relative to software peers. Additional upside may come from continued international expansion, deeper enterprise penetration, and broader product adoption, while customer diligence suggests Twilio remains a best in class communications platform with a meaningful competitive lead driven by its Super Network and developer-first approach.

Valuation

Our Dec-27 PT of \$335 is based on applying a ~30x EV/uFCF to our CY28E uFCF estimate of ~\$1.79B multiple. Our target multiple of ~30x (versus ~25x previously, primarily due to a rise in peer multiples) is at a discount to a peer group of Non-Seat Based Software Growing Low-Teens Plus (SHOP, MDB, DDOG, DT, SNOW), which trade at ~37x CY28 uFCF on average. The discount accounts for a lower FTM growth profile (16% vs. 24% for comps), offset somewhat by momentum across its core business as well as early signs of traction with its AI products, particularly on the voice side, and what we believe is an achievable and potentially exceedable guidance framework.

Risks to Rating and Price Target

Risks to Downside

Large Customer Concentration, Especially WhatsApp. Twilio derives a significant amount of revenue from large customers without long-term contracts, which it calls Variable Customer Accounts.

Dependence on External Infrastructure Such as Amazon Web Services and Global Telecom Carriers. Twilio's cloud infrastructure and products rely nearly entirely on Amazon Web Services (AWS) and are vulnerable to any AWS service interruptions or data breaches. Additionally, AWS may terminate its agreement with Twilio with a 30-day notice, and while Twilio believes that it could regain comparable service elsewhere, this could result in delays and reputational damage. Additionally, Twilio relies on network service providers and is vulnerable to pricing changes and service interruptions and delays.

New Messaging Technologies Could Disrupt Twilio's Core Messaging Capabilities. We believe a large portion of Twilio's business is dependent on global SMS usage and carrier costs; however, newer and low-cost-to-free messaging capabilities that are native to mobile phones, e.g., push-notifications like those native to Apple's iPhone, and other protocols such as Apple iMessage and Facebook Messenger could supplant usage of SMS and impact Twilio's revenue.

Exposure to Ride Hailing, Travel, Hospitality Services, and Airlines. COVID-19 has caused business activity for these verticals, to which Twilio has notable exposure, to come to a grinding halt. With fewer customers partaking in these services, these companies (Ride Hailing, Travel, Hospitality Services, and Airlines) are naturally consuming less of Twilio's services.

Usage-Based Revenue Model. Twilio could be susceptible to general macroeconomic gyrations as its revenue model is usage-based, and a declining macro environment could lead to a decline in SMS volumes and voice usage.

General Risks

Shareholder Voting Power Is Concentrated with a Few Investors. As similarly preceded by companies such as Workday, Box, and Tableau, Twilio has a dual-class structure of common stock that effectively concentrates 98.6% of shareholder voting power to its class B (10 votes per share) shareholders—generally directors and those who invested in Twilio prior to the IPO. Class A shareholders (1 vote per share) will have limited influence on the way the company is managed.

Investment Thesis, Valuation and Risks

Figma (*Neutral*; Price Target: \$28.00)

Investment Thesis

Figma offers an integrated, AI-powered design and product development platform, which is increasingly emerging as the core system of record across a wide spectrum of design-related workflows due to its multiplayer (WebGL, WASM), extensible (MCP, APIs), and interoperable architecture. Figma's end-to-end, browser-based platform provides tools across the design process, spanning workflows such as ideation and alignment (FigJam – 2021, Figma Slides – 2024), visualization (Figma Design – 2015, Figma Draw – 2025), building (Dev Mode – 2023), and shipping and promotion (Figma Sites – 2025, Figma Buzz – 2025); with an AI automation foundational layer embedded across these tools (Figma Make – 2025). Billions of individuals around the world use apps, websites, and other digital experiences that are made in Figma every day, with its platform enabling designers to work alongside developers, product managers, researchers, marketers, writers, and other non-designers. While there are inherent uncertainties related to the impact of AI for specific software companies and the software industry broadly, Figma's forward-leaning AI investments, history of innovation, integration of designer workflows across its platform, including with developers, and assets and data in its platform potentially position it well to proliferate and monetize AI across its platform. We anticipate some level of growth moderation as Figma laps recent product launches and price increases, though we see potential for incremental upside based on forecast conservatism, revenue from newly launched products and features, increased adoption, and additional price updates over time. We expect PF FCF margins to normalize following an AI-related investment cycle over the next several quarters and improve over time as a result of scale and growth investments potentially driving revenue growth.

Valuation

Our December 2027 price target of \$28 is based on applying a 6x EV/Revenue multiple to our CY28 revenue estimate of ~\$2.31 bn. The multiple is slightly below the combined median of two groups: (1) our primary financial comp set of software companies with >\$1 bn in revenue and blended revenue growth of >20%, and (2) top-tier, seat-based application software companies with healthy double-digit growth. This comparable set trades at a median of ~7x EV/CY27E revenue. We believe the slightly lower multiple is justified by the deceleration in top-line growth.

Figure 13: FIG EV/Revenue-Based Price Analysis

Risks to Rating and Price Target

Upside risks

Accelerated Adoption of New Products. Figma has shown a healthy track record for new product innovation and has recently launched a series of new products, many of which in our view may not be fully baked into forward expectations given their nascent stage of market rollout. Faster than anticipated adoption and monetization of new products could present an upward bias to near-term revenue forecasts.

Rapid Use of Pricing & Packaging Levers. Figma has obtained a sizable install base of users, many of whom are currently on free or lower-tiered seat-based pricing tiers. While Figma recently made an update to its pricing and packaging plans, additional uses of its pricing and packaging levers to drive further monetization of its user base could present upside to the model longer-term, including more rapidly converting free users to paid.

Strong Product-Market Fit for AI Portfolio. Figma has and continues to make meaningful investments to embed AI across its product portfolio, including with the launch of Figma Make. Successful product-market fit for these products could help diversify revenue streams toward consumption-based pricing and democratize its tools to a broader set of personas, while lending investors to ascribe an AI-related premium to shares.

Downside risks

Potential for Saturation in Core Design Market. Since launching its core Figma Design product in 2015, Figma has seen rapid proliferation of users in the core collaborative design tool market and is among the leading vendors in the space. Given its high existing market share in the core design market, this could present some risks of saturation and challenge net-new user growth longer-term.

AI-Driven Seat Cannibalization Potential. Historically, Figma has offered its products on a per seat basis and only recently begun experimenting with add-on or pricing with limits on feature usage. Given its largely seat-based model exposure currently, automation driven by AI may lead to ongoing compression in headcount, thus driving downsell pressure across its user base, particularly within the technology vertical.

Macroeconomic Gyration & IT Spending Headwinds. The macroeconomic environment has been volatile, and any persistent macroeconomic headwinds, including relating to potential trade escalations, tariffs, and other geopolitical tensions, could prompt buyers to more carefully consider IT purchases or delay purchasing altogether, which could adversely affect shares.

Multi-Class Share Structure & Voting Power. Figma's multi-class share structure has the effect of concentrating voting power (>70%) and control toward specific internal executives of the company, with Class B shares carrying 15 votes relative to a single vote recognized for Class A shares of common stock. In addition, the share lock-up expiry post IPO could create the potential for volatility in shares in the near-term.

Investment Thesis, Valuation and Risks

Dynatrace (*Overweight; Price Target: \$64.00*)

Investment Thesis

Dynatrace is a bona fide leader in Application Performance Monitoring (APM), although the company has broadened its portfolio into the broader observability space over time. It offers a software intelligence platform that allows customers to monitor various metrics and effectively answer questions in a time-sensitive manner about the performance and security of applications going up to the code level, as well as of the underlying infrastructure, to ensure application reliability and consistent customer experience. Our Overweight rating reflects our strong fundamental positive bias toward Dynatrace given its leadership position in the market with a highly differentiated AI-enabled software platform, its expansion into areas such as Infrastructure Monitoring, Logs, and Application security broadening its opportunity set, ample opportunity within its installed base, focus on accelerating growth barring macro with continued sales capacity investments along with a recent focus on GSIs, and, last but not least, a very attractive financial model.

Valuation

We are maintaining our \$64 Dec 2027 price target for Dynatrace, which is based on a ~24x CY28E EV/ uFCF multiple, reflecting confidence in ARR acceleration and the associated re-rating, although we remain conservative to the comps trading at more than 30x multiples and closest peer Datadog at >60x (although with higher growth). Our CY28E uFCF estimate is \$763M.

Figure 14: EV/ uFCF Valuation Analysis for Dynatrace

Source: J.P. Morgan, Bloomberg

Risks to Rating and Price Target

Downside Risks

Execution Risk. We believe execution is one of the key risks to the story. Dynatrace deploys a land-and-expand go-to-market strategy for which customers start from a free trial to expand their usage across its six modules, driving over 12% net expansion rates. Inability to continue to drive that customer expansion could impact ARR growth rates and slow down the business. While we think it's executing pretty well so far, it is difficult to predict execution as we enter a potentially choppy macro backdrop.

Competitive Pressure from Higher Growth Peers. Dynatrace has established itself as a category leader with impressive APM capabilities and has also expanded into infrastructure monitoring where Datadog operates and into log management where Splunk is the leader. Persistent competitive pressure from the likes of Datadog, New Relic, and others could impact Dynatrace's ability to add new customers, maintain and accelerate top-line growth, and improve margins.

General Risks

Security Breaches and Outages. Dynatrace provides its software as a self-managed as well as a SaaS subscription. With respect to the SaaS solution, service can be provided over the internet, which involves transmission of its customers' data. Additionally, Dynatrace's applications are hosted, and the data are stored in third-party data centers. Any unauthorized access to the data due to security breaches or any outages that might impact the uptime of the systems could negatively impact Dynatrace's business.

Macroeconomic Gyration. Any persistent macroeconomic headwinds could prompt buyers to more carefully consider their purchase or delay purchasing altogether, which could adversely affect Dynatrace's business prospects.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period. J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, <https://www.jpmorganmarkets.com>.

Coverage Universe: Chatterjee, Samik : Adobe Inc (ADBE), Akamai Technologies, Inc. (AKAM), Apple (AAPL), Cloudflare (NET), CoreWeave (CRWV), Datadog (DDOG), DocuSign (DOCU), DoubleVerify (DV), Dynatrace (DT), Figma (FIG), HubSpot (HUBS), Intuit (INTU), Microsoft (MSFT), Monday.com (MNDY), Oracle (ORCL), Paycom (PAYC), Roper Technologies (ROP), Salesforce Inc (CRM),

J.P. Morgan Equity Research Ratings Distribution, as of October 03, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	35%	12%
IB clients**	83%	81%	72%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	93%	88%

*Please note that the percentages may not add to 100% because of rounding.

**Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.

For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at <http://www.jpmorganmarkets.com>, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, <http://www.jpmorganmarkets.com>. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of <http://www.jpmorganmarkets.com> where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to [UK MIFID Research Unbundling exemption](#) for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Digital assets, which may also be referred to as virtual or crypto assets or crypto currencies (e.g. bitcoin), discussed in this research report are subject to a rapidly changing regulatory landscape. The application of relevant laws in respect of such assets may be unsettled, and the legality of any digital asset investment may be unclear. Prior to making any investment decision regarding any digital asset, investors should seek their own legal advice and be aware of any legal considerations regarding the purchase, holding or selling of such an investment. For relevant regulatory advisories on digital assets, including bitcoin and ethereum, please see <https://www.jpmorgan.com/disclosures/cryptoasset-disclosure>.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates

of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit <https://www.theocc.com/components/docs/riskstoc.pdf> for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts’ views and research, and it may also engage in transactions for its own account or for its clients’ accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.

Confidentiality and Security Notice: This transmission may contain information that is privileged, confidential, legally privileged, and/or exempt from disclosure under applicable law.
