Goldman Sachs Bank Europe SE - Milan branch

New order growth opportunities are emerging. A new agreement between Fortum and Google this quarter reinforced our view that inflecting power consumption (2%–3% up yoy in Europe), a pick-up in electrification (e.g., EV sales +50%) and accelerating datacenter development should translate into stronger power demand. In this context, renewables continue to stand out given their lower LCOE and faster time to market, enabling them to meet incremental power demand from electrification and artificial intelligence. Elsewhere, security of supply considerations are supporting demand in Germany, the UK and Italy while datacenter growth in Spain could provide an additional source of renewable power demand.

Another solid quarter for Nordex, 12-month orders >11 GW. Announced onshore wind orders over 3Q2026 totaled 2.8 GW for Vestas and 1.5 GW for Nordex, with no announcements of firm orders for Siemens Energy and GE Vernova. For Vestas, this was lighter than last year, with 3Q2025 total orders of 4.6GW (4.0GW announced). For Nordex, 3Q2025 orders were 2.2GW (1.2GW announced). However, we note Nordex's rolling 12-month order intake is on track to exceed 11GW, up c.60% versus three years ago. In offshore wind, Siemens Energy noted one order will be booked. We continue to expect orders to remain supported over the next several months as demand from key regions (e.g. US, Germany) flows through to manufacturers.

3Q 2026E to feature improving margins. Results season will begin with Nordex reporting 3Q26 on October 30, followed by Siemens Energy's FY26 results and Vestas' 3Q26 results on November 11. For Vestas and Nordex, we forecast a continued ramp up in profitability year-on-year, driving guidance upgrades for FY 2026. For Siemens Energy, the next catalyst is the FY results, where management plans to introduce new medium-term targets out to FY 2030. We estimate Siemens Energy currently trades on c.6x 2030E EV/EBITDA, with visibility and growth expanding. This growth is driven by: (1) higher profitability within Gas Services; (2) solid, long-duration top-line growth and higher profit margins in Grid Technologies; and (3) increased profit margins at Siemens Gamesa. We remain Buy-rated on all three stocks.

Goldman Sachs does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. For Reg AC certification and other important disclosures, see the Disclosure Appendix, or go to www.gs.com/research/hedge.html. Analysts employed by non-US affiliates are not registered/qualified as research analysts with FINRA in the U.S.

New pockets of demand starting to emerge

A new agreement between Fortum and Google this quarter reinforced our view that inflecting power consumption (2%–3% up yoy in Europe), a pick-up in electrification (e.g., EV sales +50%) and accelerating datacenter development should translate into stronger power demand. In this context, renewables continue to stand out given their lower LCOE and faster time to market, enabling them to meet incremental power demand from electrification and artificial intelligence. Announced onshore wind orders over 3Q2026 totaled 2.8 GW for Vestas and 1.5 GW for Nordex, with no announcements of firm orders for Siemens Energy and GE Vernova. This was a lighter quarter for Vestas, but we would flag that Nordex's rolling 12-month order intake is on track to exceed 11GW, up 60% versus three years ago. In offshore, Siemens Energy noted one order will be booked. Results season will begin with Nordex reporting 3Q26 on October 30, followed by Siemens Energy's FY26 results and Vestas' 3Q26 results on November 11. For Vestas and Nordex, we forecast a continued ramp up in profitability year-on-year, driving guidance upgrades for FY 2026. For Siemens Energy, the next catalyst is the FY results, where management plans to introduce new medium-term targets out to FY 2030. We estimate Siemens Energy currently trades on c.6x 2030E EV/EBITDA, with visibility and growth expanding. This growth is driven by: (1) higher profitability within Gas Services; (2) solid, long-duration top-line growth and higher profit margins in Grid Technologies; and (3) increased profit margins at Siemens Gamesa. We remain Buy-rated on all three stocks.

Google's datacenter investment in Finland strengthens power demand thesis

The Fortum–Google agreement this quarter reinforced our view that inflecting power consumption (2%–3% up yoy in Europe), a pick-up in electrification (e.g., EV sales +50%) and accelerating datacenter development should translate into higher investments for renewables. On September 9, Google announced €13bn of investments in Finland over the next two years (2027–2028), including datacenter and other supporting infrastructure investments across the country. As part of this, Google entered into a strategic partnership with Fortum, announcing a new 22-year Power Purchase Agreement (PPA) for 50% of the capacity of its Loviisa nuclear power plant through to 2050 (c.500MW). This was secured at a sizeable premium to the power price, reinforcing the trend that we have observed elsewhere (see the US [here](#) and [here](#)) of strong demand for renewable PPAs driving materially higher premiums.

Exhibit 1: Fortum's 22-year PPA implies a premium of €32/MWh

Infographic

*50% of Loviisa NPP Production (TWh)

Source: Company data, Goldman Sachs Global Investment Research

This would imply a €127m pa improvement in return and a power price uplift of €32/MWh, equivalent to 1.6x the current 2030 Finish forward power price. We see this as highlighting the clear demand to secure clean baseload power for datacenter sites.

Exhibit 2: New PPA is equivalent to 1.6x the current 2030 Finish forward power price
Nord Pool Base Power Prices (€/MWh)

1yr fwd = FNPBY1 Index, 2yr fwd = FNPBY2 Index, 3yr fwd = FNPBY3 Index

Source: Bloomberg

The Google and Fortum announcement included a Memorandum of Understanding (MoU) covering the development of new nuclear capacity, renewable generation and flexibility solutions, and energy portfolio management services. As a first step, Fortum has signed an agreement with Google to optimize a new 94 MW battery storage system contracted by Google. The facility will be located adjacent to Google's new data center in Kajaani and will support two new onshore wind farms, increasing Google's total contracted new onshore wind capacity in Finland to 629MW ([link](#)).

We view the growing demand for renewables from data centers as a further tailwind to our installation forecasts. In mid-August, Fingrid stated the planned final combined capacity of datacenter projects that have signed connection agreements totalled nearly 5GW based on information provided by project developers, including projects connected to distribution networks. In addition, the combined capacity of electric boiler projects that are under construction or already in operation has exceeded 3GW. We highlight that Finland retains a substantial development pipeline, which could provide further upside to forecasts.

Exhibit 3: Finland is able to offer attractive energy prices for industrials due to capacity being primarily renewables
Finland Installed Capacity; 2025

Source: Ramboll, Renewables Finland

Exhibit 4: There is a significant opportunity for onshore wind in Finland, with 53 GW of development pipeline
Finland Development Pipeline; H1 2026

Source: Ramboll, Renewables Finland

Taking a broader European view, we expect this to become an even more prominent theme over the next 24 months as datacenter projects progress to construction and PPA agreements accelerate, driven by demand for power and grid access to support Europe's datacenter buildout. For reference, extrapolating from data provided by the main grid system operators in Europe, we estimate a datacenter pipeline of nearly 480 GW currently. This is equivalent to 1.5x of EU28's power demand (currently at 320 GW) (see our note see [here](#)).

Exhibit 5: The European DC pipeline has reached c.480 GW
European datacenter connection requests, by country (GW, percentage)

Equivalent to c.1.5x of power demand (c.320 GW in 2025)

Source: Company data, Goldman Sachs Global Investment Research

We see increasing evidence that the development of data centers in Europe is accelerating. By the latter part of the decade, we believe data centers could support 1%-2% annual power demand growth, well beyond 2035 (more [here](#)).

Exhibit 6: By 2035, Europe's datacenter market could reach c.80 GW capacity in our upside scenario

EU Datacenter capacity evolution potential, 2025-35 (GW)

Onshore wind industry sees additional more pockets of demand EEG adds to near-term demand in Germany

In July this quarter, the German government adopted the draft bill amending the Renewable Energies Act (EEG) and Grid package. As agreed in the Cabinet decision of March 25, 2026, regarding the Climate Action Program 2026, an additional 12 GW of onshore wind energy capacity will be put out to tender. In the EEG 2027, there are additional provisions for onshore wind. This sets significantly increased auction volumes for onshore wind of 15GW/year (up from 10GW) for FY 2027 and FY 2028, 12GW for FY 2029 and 10GW for FY 2030-2032. Furthermore, it adds 12 GW of additional capacity to reach the 115 GW target by 2030.

Exhibit 7: New targets point to a potential build program of 127GW
Onshore Wind Capacity in Germany (GW)

Source: Goldman Sachs Global Investment Research, EEG

Under the Grid draft package, conditions for wind energy in southern Germany will be significantly improved. In accordance with the requirements of the grid connection package, new installations will be directed to locations where they do not further exacerbate existing grid bottlenecks during periods of high wind. Distribution network operators can designate certain network sections as bottleneck areas for up to six years. The prerequisite for this is that at least 5% of the annual electricity generation cannot be transported in the area. In such cases, wind farm operators in wind priority areas will no longer receive compensation for 18% of their annual electricity volumes, and in other areas, wind and solar farm operators will no longer receive compensation for 20%. Regionally differentiated grid construction fees will be put in place, which grid operators can pass on to electricity producers. Below is a map to give an indication of the current grid congestion situation for part of the network where we could find data.

Exhibit 8: Grid congestion in Germany Infographic

Source: dvp.energy

The enacted EEG bill supports a stronger onshore wind roll-out than envisaged in the draft Grid Package published in January 2026, with the proposed reduction in support for renewable projects less severe. The key questions now are how the curtailment changes and changes to grid construction fees will impact auction prices and how much wind development can be moved from the more congested areas to the areas that are less so. We do not expect any impact on the 25GW of capacity already awarded through auctions, although the measures will affect future auctions required to meet the targets set out in the EEG. The following chart shows the current German installation forecasts Nordex published in its Q2 results presentation. In our view, the more moderate final proposals could present upside to these forecasts, although the legislation still needs to pass through parliament during H2.

Exhibit 9: Germany represents 8-9GW pa of installations 2027-2030 (GW)

Source: Nordex

German build-out is important for both Nordex and Vestas, with Germany accounting for c.24% and c.14% of FY 2025 installations, respectively. German onshore wind turbine orders have continued to grow, with Nordex announcing 249 MW of German orders booked for 3Q 2026 thus far. This builds on its recent quarters of strong order growth, with trailing 12-month orders of c.3.0 GW in Germany. Vestas announced 479 MW of German orders for 3Q 2026 which continues the sizeable ramp up in German orders that Vestas announced in recent quarters, taking its trailing 12-month total to c.1.8 GW.

Exhibit 10: Nordex has seen +309% growth in announced German orders (TTM) from 2023 levels, and +1,310% from 2022

More renewable demand to feed datacenter growth in Spain

In August, the Spanish published a Draft Royal Decree that establishes requirements for new datacenter developments with an electrical capacity of 1MW or greater. Under the

draft, data centers would be required to match at least 80% of their hourly power consumption with new renewable generation that has been installed in the 18 months before the datacenter facility starts operations. This can be achieved via long-term contracts or locally installed energy facilities. Active development projects would have six months to align with the new standards, which is shortened to three months for facilities awaiting grid-access tenders. According to the government, more than 12 GW of grid access and connection rights have been granted to data centers since 2021. We note that as the draft regulation has only completed the consultation process and its content is not final. We believe there is scope for some moderation of the requirements, particularly given that solar generation cannot technically achieve the 80% figure – we estimate a 60% feasibility limit, if we combine physical with virtual PPAs.

Exhibit 12: Spain's total installed capacity is primarily Solar (33%) and Wind (24%)

Spain peninsular's breakdown of total installed capacity by fuel type (%); 2026

Source: Red Eléctrica

Exhibit 13: Spain peninsular has 28 GW of permitted and under development wind projects and 54 GW for solar

Spain peninsular's permitted and under development pipeline for wind and solar (GW); 2026

Source: Red Eléctrica

We see this development as positive for renewable manufacturers given the statement of intent by Spain to ensure datacenter build-out does not dilute the renewable share of the country's power generation mix. Spain has invested heavily into increasing the renewable share of its power generation mix, and has reaped the benefits during shocks such as the current gas price spike linked to tensions in the Middle East. As countries in Europe continue to pivot further towards renewables to mitigate energy price shocks, we see a growing incentive for policymakers to link datacenter development to incremental renewable capacity, creating an additional tailwind for solar and onshore wind.

Further areas are in the UK & Italy

The UK's Allocation Round 8 (AR8), which was brought forward this year to speed up the transition to clean energy and keep the UK on track for its targets, will most likely announce its results between January 4 and February 17 next year (renews). The UK government is keeping administrative strike prices for renewables in the upcoming Allocation Round 8 (AR8) at AR7 levels. As a result, Offshore Wind projects are able to obtain a maximum strike price of £113/MWh (2024 prices), with more than 17 GW of offshore wind capacity entering AR8.

Exhibit 14: Allocation Round 8 timeline

Source: Department for Energy Security and Net Zero, data compiled by Goldman Sachs Global Investment Research

As an aside, there is currently a c.5GW gap between existing operational capacity plus already-awarded, yet-to-be-commissioned projects and the lower end of the UK government's 2030 offshore wind target. Additional to AR8, the tender process for the 1.5 GW Morgan offshore wind site has been accelerated following the exit of its previous developers. The process is expected to yield a preferred bidder and to award the development rights by the end of the year ([OffshoreWindBiz](#)). As a result, AR8 would need to deliver less than 4 GW to reach the 43 GW lower end of the 43-50 GW Offshore Wind Target by 2030 if all the auctioned capacity comes online by end-2030. This would represent a significant acceleration from just three years ago, when AR5 failed to secure any offshore wind capacity.

Exhibit 15: We see further scope for Offshore Wind awards to contribute to the 2030 target
UK Offshore wind capacity (GW)

Source: Department for Energy Security and Net Zero, data compiled by Goldman Sachs Global Investment Research

Outside of Germany, Spain and UK, there have been positive developments for Onshore Wind across Europe in Italy this quarter. In Italy, the government has agreed to provide €23 bn in state aid to support up to 37 GW of new renewable capacity through December 2030, of which 16.5 GW is allocated for onshore wind. Projects will compete for 20-year two-way CfDs, with reference strike prices set at €85/MWh for wind. ([pvmagazine](#), [RenewablesNow](#))

East Asia momentum continues to support Offshore Wind

During the third quarter, several positive developments emerged across East Asia. South Korea announced the award of five offshore wind projects totaling 1.8 GW from its 2026 auction, of which Copenhagen Offshore Partners won 1.0 GW across two projects which will both use Siemens Gamesa turbines. Taiwan also provided positive updates with the release of its 2026–2039 Offshore Wind Development Roadmap, targeting an installed capacity of c.18–20 GW by 2035 and 25–28 GW by 2039. This compares to c.5 GW of current offshore wind capacity ([link](#)), and comes after having reduced its 2035 targets to 18.4 GW in 2025 ([link](#)). The government plans to hold auctions every four years, allocating c.8 GW at each auction. ([Enerdata](#), [Renews](#), [RenewablesNow](#)) This comes as Siemens Gamesa signed an agreement to charter two upcoming commissioning service operation vessels that will primarily support its offshore wind projects in Taiwan, with potential deployment to South Korea and Japan. The charter is scheduled to run for an initial two-year period starting in 2029, with options to bring the start date forward to 2028. While still early stage, this is positive for both Siemens Gamesa and Vestas which both have experience in the Taiwan market, through Formosa 4 (490 MW) and Fengmiao I (495 MW) respectively.

Exhibit 16: Siemens Gamesa and Vestas are well placed to benefit from increased auctions, with prior experience in the region

Offshore Wind Turbine Orders in recent years from East Asia (GW)

Source: Company data, Data compiled by Goldman Sachs Global Investment Research

German Offshore Wind reform could get development back on track

Germany's Offshore Wind market is undergoing reform which should be positive for future build-out. The Federal Cabinet has approved the amended draft of the Offshore Wind Energy Act (WindSeeG), which now moves to parliament to be approved. The reform has multiple positives for developers, with the key reforms being the two-stage CfD subsidy approach and the extended standard operating period to 35 years from 25 years. The proposed two-stage auction model first uses a dynamic bidding procedure without a price cap, followed by a two-sided Contracts for Difference (CfDs) as a subsequent option where the first approach does not attract developers to bid. These reforms are a positive development versus the prior approach; however, the German

offshore wind association BWO has called for the removal of the two-way tendering process in favour of CfD-only as well as reiterating its call for a legal mechanism to voluntary return or retender offshore wind sites to avoid years of blocked sites. The draft also replaces fixed annual auction volumes with a flexible tendering corridor of 2-4.8 GW annually starting in 2027.

Despite BWO's concerns, we see the reforms as beneficial to increasing the annual installation build-out of offshore wind in Germany over the coming years. This is important as over the last five years, we have seen over 60 GW of awarded offshore wind capacity through major government auctions across Europe, with Germany accounting for roughly 30% of this total. We estimate that there is c.36 GW of awarded capacity that has yet to place a firm order with a turbine manufacturer, of which Germany represents c.40%.

Exhibit 17: Germany accounts for a significant proportion of the awarded Offshore Wind capacity yet to order turbines

European awarded capacity without turbine orders

Awarded Capacity without Turbine Orders

Source: Company data, Goldman Sachs Global Investment Research

Of the c.15 GW of capacity that has been awarded in German auctions but has yet to see an order with a turbine manufacturer, TotalEnergies is the largest developer with 7.5 GW. Second is the JERA Nex bp joint venture with 4 GW. RWE has yet to place orders for 2 GW of awarded capacity, followed by EnBW with 1 GW and Luxcara with 0.3 GW. However, Luxcara has reserved Siemens Gamesa turbines for this project, following the order of turbines for the Waterekke offshore wind project (1.5 GW) which is in close proximity to the 0.3 GW Waterkant project.

Exhibit 18: TotalEnergies and JERA Nex bp hold the largest amount of awarded German offshore wind capacity for which turbine orders have not yet been placed
German Offshore Wind Awarded Capacity without firm orders, by developer (GW)

Source: Company data, Goldman Sachs Global Investment Research

Based on the latest expected commissioning dates by Deutsche WindGuard, Germany looks set to reach its 30 GW installed capacity target for Offshore Wind by 2032/33; however, lease exits would further delay site development and, as a consequence, reaching the target.

Exhibit 19: Germany looks set to reach its 2030 Offshore Wind target by 2032/33
German Offshore Wind installed capacity (GW)

Source: Deutsche WindGuard

Other developments in European Offshore Wind

The broader European offshore wind market has also seen several positive developments that could support future order growth. Belgium has approved the revised regulatory framework for the relaunch of the tender for the 3.5 GW Princess Elisabeth Zone which introduces CfDs and extends the maximum construction period from 4 to 5 years ([Renews](#)). In France, the government's €63bn state aid scheme to provide CfDs to 11 offshore wind farms over the next 25 years has been approved by the European Commission, which could help to deploy up to 11 GW of capacity. ([European Commission](#)). Meanwhile, Denmark awarded 1.8 GW of capacity to Vattenfall at its latest tender under the CfD framework, which is a positive development following its failed auction in 2025 and auction re-design for this latest tender. ([Renews](#)). Finally, Norway confirmed that the government will deliver its review of a c.€3.2 bn floating wind support scheme in October 2026, nine months ahead of the parliamentary deadline of mid-2027, which could provide further support for roll-out in the country ([Recharge](#)). Overall, we see the outlook improving across Europe for Offshore Wind auctions and, as a result, installations over time.

Vestas sees an uptick in onshore activity

Announced onshore wind orders over 3Q 2026 totaled 2.8 GW for Vestas and 1.5 GW for Nordex, with a single 96 MW order for GE Vernova and no announcements of firm orders for Siemens Energy. For Vestas, this compares to 3Q 2025 total orders of 4.6GW (4.0GW announced). For Nordex, we highlight that orders are ahead (2.2 GW; 1.2 GW announced) of 3Q 2025 announced with more orders coming after the end of the quarter (e.g., the 750MW order in Turkey that was announced on April 2 after 1Q25). In offshore wind, Siemens Energy noted one order will be booked. We continue to expect orders to remain supported over the next several months as demand from key regions (e.g. Germany) flows through to manufacturers.

3Q onshore showed continued US order momentum

Announced onshore wind orders over 3Q 2026 totaled 2.8 GW for Vestas and 1.5 GW for Nordex, with a single 96 MW order for GE Vernova and no announcements of firm orders for Siemens Energy. For Vestas, this compares to 3Q 2025 total orders of 4.6 GW (4.0 GW announced). For Nordex, we highlight that orders are ahead (2.2 GW; 1.2 GW announced) of 3Q 2025 announced with more orders coming after the end of the quarter (e.g., the 750MW order in Turkey that was announced on April 2 after 1Q25). Overall, while we do not believe the available data covers the full intake for 3Q, we believe it indicates a slightly lighter quarter for Vestas, with a continuation of the pick-up in US activity for Vestas and Nordex which started to turnaround across 2H last year.

Exhibit 20: Across our coverage, announced onshore is seeing some signs of slowdown
Onshore wind turbine historical order intake vs. 3Q26 announced orders (GW)

Current quarter (pattern fill) only includes announced orders.

Source: Company data, Goldman Sachs Global Investment Research

To give a sense of development, below we present rolling 4-quarter onshore order intake. We see this as a better reflection of how growth has been improving, avoiding the distortions that can arise in any one quarter. Onshore orders experienced strong growth after they reached a bottom in 4Q 2022, but this has partly reversed for Vestas which has been impacted by US policy uncertainty. For Nordex, there has been continued strength with order intake c.+68% versus FY 2022. However, in Vestas's case, growth has been slower (c.+44%), which is partly due to softer US order intake and the uncertainty around US energy policy.

Exhibit 21: Looking at orders on a trailing 4-quarter basis shows Nordex's order intake remains at elevated levels

Trailing 12-month onshore wind orders (GW)

Source: Company data, Goldman Sachs Global Investment Research

No offshore orders in 3Q

This quarter, no offshore orders were announced; however, Siemens Energy noted at its pre-close call that it will book one large offshore order this quarter. Siemens Energy has received over 5GW of offshore orders since the start of 2024, and Vestas has received over 10GW. While these offshore orders will take time to be delivered, we see them de-risking the growth picture over the next several years.

Exhibit 22: Vestas has been the most active over the last eight quarters

Offshore wind turbine announced orders (GW)

Vestas started reporting offshore wind orders only in 2Q 2021 following integration of the offshore business.

Source: Company data, Goldman Sachs Global Investment Research

While we continue to view offshore wind as being in a ramp-up period, the outlook for growth remains healthy. We note that the combined offshore order backlog for Vestas and Siemens Energy stood at an estimated (GSe) c.€28bn as of 2Q 2026. Furthermore, we note that Vestas over this period has gained market share relative to Siemens Energy.

Exhibit 23: We continue to expect order growth in offshore wind over the coming years; we note that the combined order backlog for Vestas and Siemens Energy in offshore wind stood at an estimated c.€28bn as at the end of 2Q 2026

Offshore order backlog (GW)

From 4Q 2024, backlog disclosure stopped for Siemens Energy; GSe thereafter

Source: Company data, Goldman Sachs Global Investment Research

Between the companies, Vestas' business model is currently more geared to onshore wind than offshore wind as the backlog in [Exhibit 24](#) shows. From a strategic perspective, Vestas and Nordex are currently positioned towards capturing growth in turbines, while Gamesa and GE Vernova are more focused on backlog execution.

Exhibit 24: Across our coverage, the backlog for onshore, offshore and services looks generally healthy

Current order backlog as of 2Q 2026 (€bn)

USD/EUR: 0.87. Gamesa stopped reporting splits from 4Q24.

Pipeline watch: Upcoming auctions in offshore wind

To monitor the strong installation growth we see in the offshore wind market, below we detail the upcoming offshore auctions, as outlined by developer Orsted.

Exhibit 26: Upcoming quarters will be important for the growth trajectory

Key wind auctions, 2026/27

South Korea 2026 Korean Tender Up to 2,000 MW	Belgium 2026 Belgian Tender 700 MW	Taiwan 2026 Taiwan Tender 3,600 MW	United Kingdom 2026 CfD AR8
Australia 2026 Australian Tender 2,000 MW	The Netherlands 2026 Dutch tender 2,000 MW	United Kingdom 2027 Seabed auctions, Lease Round 6 of c.6 GW	South Korea 2027 Korean Tender Up to 5,000 MW
The Netherlands 2027 Dutch tender	Poland 2027 Polish Tender 4,500 MW	United Kingdom 2027 CfD AR9	Germany 2027 German Tender

Orsted as of 2Q 2026

Source: Company data

In the case of Siemens Gamesa, the company aims to grow its wind business by a low-to-mid single digit out to FY2028. Siemens Energy is addressing Europe and the US as its core onshore market for the 4.X and 5.X product. In offshore, Siemens Gamesa remains focused on ramping up its factories and new product generation as well as executing on its order backlog. We see offshore being scaled to the full extent of its current manufacturing footprint, rather than aggressive capacity additions. Combined with the target for the division, we see the strategy as more of a value-over-volume approach versus history overall.

GE Vernova's CEO highlighted that the company will not pursue new offshore orders until market conditions (supply chain strains and rising interest rates) improve. It will instead focus on delivering existing projects and executing on its \$3bn order backlog over the next two years. As the remaining players in the ex-China offshore wind market, we would see Vestas, Siemens Energy and the Chinese wind manufacturers as the key beneficiaries from any scaling back of supply.

Exhibit 27: Siemens Gamesa and GE Vernova have lost market share in offshore wind with GE Vernova receiving no orders in recent years

Vestas, Siemens Gamesa and GE Vernova firm offshore orders (MW)

Raw material prices are increasing while contracted container rates are muted

Over 3Q 2026, EU steel prices were broadly flat sequentially (-1% qoq, +20% yoy) after more significant growth last quarter. Spot prices for European plate steel averaged c.€752/t over the quarter, c.37% below the average cost of 2022 (€1,191/t) but c.41% higher than the average cost of 2019.

Exhibit 28: Over 3Q 26, prices in Europe and China were broadly flat at -1% and +2% QoQ, respectively, while the US saw a more significant 13% increase
Steel plate (€/t)

Includes data up to 28 September 2026.

Source: Platts SBB

Although shipping costs only account for a relatively small share of total costs and are based on supply agreements, we highlight that benchmark container rates (using the CCFI China to Europe freight as a proxy) have come down materially from the local peak in August 2024. While these benchmark rates are c.61% below peak levels, the 3Q average is currently c.2x the 2020 average, and has increased by a significant c.38% quarter-on-quarter.

In our [European Transport team](#)'s view (in their report from September 18), air & ocean freight markets remain in good shape, reflecting growth in goods-producing economies particularly out of Asia. Container rates have returned to the highs seen following the onset of the Red Sea disruption a few years ago. This strength reflects a combination of limited capacity growth, owing to vessel delivery timing, and robust demand, particularly on long-haul China export routes. However, the extent of the increase over summer was also a function of US re-stocking meeting extremely high levels of disruption that reduced effective capacity, much of which was climate-related (China typhoons, Rhine river levels, Panama Canal restrictions, and related port congestion). As disruptions slowly fade, and assuming more liner services continue to re-route through the Suez Canal (now 1/3 of services, new trend since summer), our team expects container rates to fade into year-end, albeit gradually. Overall, 3Q is likely to be another strong quarter across freight and logistics, with a clear sequential improvement in ocean freight earnings.

Exhibit 29: While 3Q contracted shipping rates are c.61% below peak levels, they are now c.104% above their 2020 average and +38% QoQ
CCFI China-Europe Freight Index

CCFI is a reference benchmark for freight (container) shipping. Includes data up to 25 September 2026.

Average selling prices stable

Following almost two years of continuous price increases for wind turbines, prices appear to be stabilising in recent quarters. It is worth noting that Nordex is purely onshore, so any distortions in the quarter largely come from geography and the scope of turbine sales. For Vestas, numbers are disclosed on a combined basis for onshore and offshore, which limits comparability versus peers, and from quarter to quarter. Vestas noted its ASP reflected a good mix of project scope, geography and type with the overall pricing environment remaining stable. Vestas secured 0 GW of Offshore Wind orders in 2Q26, versus 2.8 GW in 1Q26 and 1 GW in 4Q25. Siemens Gamesa no longer discloses the data, but we include the history.

Exhibit 30: Compared to 4Q 2021 levels, 2Q 2026 ASPs were up 16% for Vestas and 31% for Nordex

Average selling price for turbines (€mn/MW)

Source: Company data, data compiled by Goldman Sachs Global Investment Research

A “value-over-volume” approach remains in focus for the wind industry, and we expect manufacturers to maintain pricing at a level that should support an eventual recovery in project margins. Zooming out from the regular quarterly volatility of ASPs, on a 12-month rolling basis, pricing is currently up 26% and 29% for Vestas and Nordex respectively (versus 2021). We see this as an indication of strong cost pass-through and, ultimately, improving margins, while ASPs on a quarter-by-quarter basis can be influenced by factors such as product (weighting of offshore to onshore in the case of Vestas), geographical mix and project scope, among others.

Exhibit 31: Pricing has improved relative to 2021 and has been stable recently once adjusted for scope

Average selling price (ASP) for onshore turbines (12-month rolling)

3Q 2026 to feature improving margins

Results season will begin with Nordex reporting 3Q26 on October 30, followed by Siemens Energy's FY26 results and Vestas' 3Q26 results on November 11. For Vestas and Nordex, we forecast a continued ramp up in profitability year-on-year, driving guidance upgrades for FY 2026. For Siemens Energy, the focus for the quarter will be largely on order intake, and new FY 2030 targets. We remain Buy-rated on all three stocks.

Below we present a table of our estimates versus consensus. We expect another strong year-on-year result for Vestas and Nordex, driven by lower ramp-up costs for Vestas and higher fixed cost absorption from higher revenues for both names. We expect this to continue through the year.

Exhibit 32: We expect a solid 3Q driven by good execution

Summary of GS vs. Consensus

Vestas (€ mn)	Q3 2026 GS	Q3 2026 Cons*	Q3 2025	% vs cons	% chg yoy
Total Revenue	5,861	6,056	5,339	-3%	10%
EBIT before Special Items	527	555	416	-5%	-27%

*Visible Alpha Consensus

**Bloomberg Consensus

Source: Company data, Company-compiled consensus, Visible Alpha Consensus Data, Goldman Sachs Global Investment Research, LSEG Data & Analytics

For Vestas and Nordex, we forecast a continued ramp-up in profitability year-on-year, driving upgrades to FY 2026 guidance. With the majority of the execution for the year complete by Q3, we expect Vestas and Nordex to both narrow margin guidance. We estimate that Vestas will narrow its EBIT margin guide to 8% to 9%, and Nordex will narrow its EBITDA margin to 10% to 11%.

Exhibit 33: FY 2026 guidance for Vestas and Nordex

FY 2026 Guidance		
	Vestas	Nordex
Revenues	€20 - 22bn	€8.2 - 9.0bn
Margins	7% to 9% EBIT margin*	8% to 11% EBITDA Margin

*before special items

Source: Company data

In the case of Vestas, we believe a narrowing of guidance is largely expected rather than a material positive surprise, given the strong margin performance reported in Q2. For Nordex, by contrast, we believe a narrowing of guidance towards the top end of the range is less widely anticipated. We expect Nordex to deliver EBITDA at the upper end of its FY2026 guidance, implying c.7% upside to current consensus EBITDA forecasts.

Exhibit 34: Vestas FY 2026 EBIT (€m) and EBIT Margin (%)

Source: Visible Alpha Consensus Data, Company data, Goldman Sachs Global Investment Research

Exhibit 35: Nordex FY 2026 EBITDA (€m) and EBITDA Margin (%)

Source: Visible Alpha Consensus Data, Company data, Goldman Sachs Global Investment Research

For Vestas, we continue to see further buybacks, expecting €650mn in total by year-end.

Exhibit 36: Vestas' Capital return strategy: dividends and buybacks

Payouts to shareholders in forms of dividend and share buyback (€m)

Source: Company data

For Siemens Energy, we expect FY 2026 to come in at the top of the company's profit before special items margin guidance range (12% versus a range of 10%-12%). We expect 4Q to be consistent with delivery of its guidance and see the results as another opportunity to unwind the discount in wind, which we believe the market is currently pricing. Furthermore, despite Siemens Energy's 4Q being a seasonally weaker quarter for Gas Service order intake, we expect it to come in ahead of its 36GW planned target for the year stated at 1Q 2026 results.

Exhibit 37: We see Siemens Energy delivering slightly ahead of FY 2026 consensus

GS Siemens Energy estimates

Siemens Energy (€ mn)	FY2026 GSe	FY2026 cons*	FY2025	% vs cons	% chg yoy
Total Revenue	44,237	44,155	38,555	0%	15%

*Visible Alpha consensus

Source: Company data, Visible Alpha Consensus Data, Goldman Sachs Global Investment Research

Siemens Energy's share price has suffered since May, driven by a wider long-term multiple de-rating of the AI complex as well as concerns over gas turbine overcapacity. As we wrote in our note, New Gas Service targets should provide further growth visibility, we see these fears as over played and do not take into account the revenue opportunities for the Gas Service segment long term.

Exhibit 38: Share price weakness despite multiple signals of increasing fundamental strength
Siemens Energy Share Price

Source: LSEG Data & Analytics, Company data

The next catalyst is the FY results, where management plans to introduce new medium-term targets out to FY 2030. We estimate Siemens Energy currently trades on c.6x 2030E EV/EBITDA, with visibility and growth expanding. This growth is driven by: (1) higher profitability within Gas Services; (2) solid, long-duration top-line growth and higher profit margins in Grid Technologies; and (3) increased profit margins at Siemens Gamesa.

Exhibit 39: Siemens Energy updated outlook

Siemens Energy Financial Outlook	Previous FY26 Outlook		New FY26 Outlook		FY28 Targets	
	Revenue Growth	Profit margin before SI	Revenue Growth	Profit margin before SI	Revenue Growth	Profit margin before SI
Gas Services	16-18%	14-16%	16-18%	14-16%	Mid-teens	18-20%
Grid Technologies	19-21%	16-18%	25-27%	18-20%	High-teens	18-20%

Siemens Energy	11-13%	9-11%	14-16%	10-12%	Low-teens	14-16%
Net Income	€3bn - €4bn		around €4bn			
Free Cash Flow pre tax	€4bn - €5bn		around €8bn			

Source: Company data

Looking at capital returns, we see scope for more than €25bn to be returned to shareholders out to the end of the decade. Recently, Siemens Energy announced it will commence the third tranche of its share buyback program on 24 September 2026, with a volume of up to €2bn. The tranche will run until 31 March 2027 at the latest. The tranche forms part of Siemens Energy's share buyback program of up to €6bn, which is scheduled to run until the end of fiscal year 2028. Including the buyback, Siemens Energy will have returned €5bn of the €6bn of buyback earmarked out to FY 2028. This forms part of €10bn of returns of value over the period when dividends are included. If the company were to maintain the existing run rate for buybacks it would imply €12bn over the period to FY 2028 for buybacks and €16bn returns of value. Overall, we would see this announcement as a positive and it sets up for an update on capital allocation on the Capital Markets Day on 11 November. We remain Buy rated.

Exhibit 40: Siemens Energy seeks to return one-third of its cash position over this period to shareholders

Siemens Energy Capital Allocation to FY 2028

Source: Company data

We make estimate changes across our turbine manufacturers coverage. For Nordex and Vestas we increase margins as the companies benefit from higher revenue year-on-year, driven by higher operational leverage. This increases our EPS by c.3% on average across FY26-28 for both names. We make minor changes to our FY26-28 estimates for Siemens Energy (EPS rising <1%), driven by slightly revised Siemens Gamesa installation forecasts.

Exhibit 41: Estimate changes for Vestas, Nordex and Siemens Energy

Research you need to read

CHART OF THE QUARTER

Exhibit 42: Gas Service is positively exposed to sizeable power demand growth through OEM and Service growth
Infographic

Source: Goldman Sachs Global Investment Research

(July 28) Gas Service represents roughly one-third of Siemens Energy's revenues and has experienced a sizeable uptick in backlog in recent years. We view this as consistent with the power sector entering a capex super-cycle, fueled by surging power demand from data centers, reshoring of manufacturing and electrification. Adding to this theme, there is a need to replace aging gas-fired assets, substitute retiring coal capacity, and support a power system that is becoming more intermittent. We continue to see a positive pricing and volume environment out to FY 2030 despite capacity additions announced over the last 12 months. In the US, we expect the bulk of Siemens Energy's offering to data centers to be behind the meter, which should connect to the grid as it develops, with a lower levelised energy cost vs engine peers that have only a partial overlap. We see OEM revenue (35% of FY 2025) benefiting from better pricing and volume, while c.50% of FY 2030E revenue comes from Service (additional installations, nuclear life extensions, higher load and gas station extensions). Our €6.2bn FY 2030E Gas Service EBITA reflects a 14% FY 2025-30 revenue CAGR and a 26% EBITA margin vs guidance for mid-teens pa FY 2025-28 growth and an 18-20% FY 28 EBITA margin. We see Siemens Energy's delivery this year as providing reassurance on fundamental demand tailwinds (grid capex, energy security). FY results should support this view, as the company plans to give new medium-term targets out to FY 2030. We remain Buy rated (on CL).

Siemens Energy 3Q26: Strong EBITA beat & FCF with FY guidance upgraded

Siemens Energy's result represented another strong quarter with an upgrade to FY consensus EBITA estimates to come through. Overall EBITA was an 18% beat on Q3 company-compiled consensus with c.90% of the Free Cash Flow pre tax delivered in the first nine months. The mid point of the new guidance implies a 3% upgrade to EBITA consensus. Once the strong performance has been digested we see eyes moving to the next key catalyst which is a Capital Markets Day (Nov 11).

(August 5) Siemens Energy released Q3 2026 results today (August 5th). Profit before Special Items was €1,623m (consensus: €1380m), reflecting a margin of 14.2% (consensus: 12.3%). Free Cash Flow pre tax was €2,319m (Q3 FY2025: €419m). Overall EBITA was an 18% beat on Q3 company-compiled consensus with c.90% of the Free Cash Flow pre tax delivered in the first nine months. Group orders were a 6% beat at €17,926m (consensus: €16,840m) with the strength in orders coming from Gas Services. Siemens Energy upgraded Profit Margin before Special items guidance to the top end of the 10–12% range, but kept comparable revenue growth guidance at 14–16%. The mid point of the revenue guidance and the 12% EBITA guidance translates to €5.4bn EBITA which is a 3% upgrade to company-compiled consensus. Furthermore, Siemens Gamesa delivered €75m in Q3 2026, the first positive result since Q4 2022. **View:** Today's result represent another strong quarter with an upgrade to FY consensus EBITA estimates to come through. Once the strong performance has been digested we see eyes moving to the next key catalyst which is a Capital Markets Day (Nov 11). Our EBITA estimates are 6% ahead of consensus by FY 2030, and we forecast a further material acceleration in cash flow. This leaves the company trading at c.6x 2030E EV/EBITDA, with visibility and growth expanding. This growth is driven by: (1) higher profitability within Gas Services; (2) solid, long-duration top-line growth and higher profit margins in Grid Technologies; and (3) increased profit margins at Siemens Gamesa. Looking at capital returns, we see scope for more than €25bn to be returned to shareholders out to the end of the decade. When compared to GE Vernova, Siemens Energy's performance continues to progress meaningfully, supporting the case for the relative valuation gap to narrow on 2028E EV/EBITDA (Siemens Energy at a c.47% discount). We remain Buy rated.

Siemens Energy: Greater focus to bring higher margins & higher returns of value?

Siemens Energy is starting preparations for the legal and operational separation of its Transformation of Industry business area. The goal is to establish the business as a standalone entity and create a strong, independent industrial energy solutions company. We value Transformation of Industry at €10.8bn or an EV of €12.2/share within our SOTP. It would further focus the portfolio, provide additional funds for returns of value and likely improve group margins given the lower margin outlook for the division.

(August 25) Siemens Energy stated (see [link](#), August 25, 2026) that it is starting preparations for the legal and operational separation of its Transformation of Industry business area. The goal is to establish the business as a standalone entity and create a strong, independent industrial energy solutions company. The future setup is intended to provide Transformation of Industry with additional options for further growth ranging from bringing in external investors to a potential capital markets transaction. Siemens Energy intends to deconsolidate the business while retaining a meaningful minority stake to support the business's continued development. The Transformation of Industry business comprises 17,000 employees, €5.7bn in revenue, 11.3% profit margin (FY 2025) and an €8bn order backlog. **View:** We value Transformation of Industry at €10.8bn or an EV of €12.2/share within our SOTP (see here). If successful, we would see such a move as aligned with the company's strategy and in line with management communication in previous investor presentations. It would further focus the portfolio, provide additional funds for returns of value and likely improve group margins given the lower margin outlook for the division. On our estimates, the FY2025-30 revenue CAGR would move from 12% to 13% pa, and the EBITA margin for FY 2030 would move from 21% to 22%, if we were to move from current scope to one that is ex Transformation of Industry. We remain Buy rated (on CL) and see the increased focus as adding another dimension to a strong re-rating story.

Vestas 2Q26: Big beat, raised guidance & a higher buyback

Vestas reported EBIT before special items of €446m vs consensus of €205m for the quarter. As a result, Vestas raised EBIT margin guidance to 7% to 9% from 6% to 8% previously. At the midpoint of the new guidance this would equate to a 9% consensus EBIT upgrade. The company has decided to initiate a new share buyback of €400m that will run until the end of the calendar year. The €400m buyback should be taken positively and combined with the improved profit outlook, points to a business that is turning a corner.

(August 12) Vestas released its Q2 2026 results this morning (August 12th). Vestas reported revenue of €4.723bn, EBIT before special items of €446m. This compares with company-compiled consensus EBIT before special items of €205m for the quarter, which is 120% higher than company-compiled consensus. Furthermore, the Q2 EBIT margin equates to 9.4% versus 1.5% in Q2 2025. Vestas maintained FY revenue guidance at €20.0-22.0bn but raised EBIT margin before special items to 7%-9% versus 6%-8% previously. Company-compiled consensus is currently forecasting €21.3bn revenue and €1,540m EBIT before special items for FY 2026, equivalent to a 7.2% EBIT margin. At the midpoint of the new guidance, this would equate to a 9% consensus EBIT upgrade. The company has decided to initiate a new share buyback of €400m that will run until the end of the calendar year. **View:** Overall, a strong set of numbers with a sizable upgrade to FY consensus EBIT. The €400m buyback should be taken positively and, combined with the improved profit outlook, points to a business that is turning a corner. We see the focus of the call to be (1) Operational leverage given H2 volume weighting of the business and scope to be at medium-term guidance by year end (i.e. 10% EBIT margin); (2) The implications of changes in US energy policy; and (3) Progress on the ramp-up of offshore. We remain Buy rated.

European Utilities Back to School: A bias for Renewables

Concerns over rising rates and approaching general elections (France, Italy) could temporarily put a lid on sector performance. However, we would use any weakness as entry point into our Buy-rated stocks: we believe the sector is already pricing in a strong increase in rates, whilst the re-opening of Hormuz should ultimately lower the cost of capital. Energy prices are likely to be strong into winter, and the 'earnings super cycle' growth thesis (electrification, datacenters) is gaining momentum. We are positive on Renewables.

(September 7) Concerns over rising rates and approaching general elections (France, Italy) could temporarily put a lid on sector performance. However, we would use any weakness as an entry point into our Buy-rated stocks: we believe the sector is already pricing in a strong increase in rates, whilst the re-opening of Hormuz should ultimately lower the cost of capital. Energy prices are likely to be strong into winter, and the 'earnings super cycle' growth thesis (electrification, datacenters) is gaining momentum. We are positive on Renewables.

Europe Wind Manufacturers: German EEG and Grid Package drafts show moderation

The German EEG and Grid draft package passed the cabinet. Overall, we would see the EEG release as a positive, implying scope for higher onshore wind rollout. Compared to a previous Grids draft package in January 2026, support cuts to renewable projects are less severe. Potentially, the moderated proposals could present some upside; we note they still have to go to parliament over H2.

(July 30) Yesterday, the German EEG and Grid draft package passed the cabinet. The key highlights were: (1) An additional 12 GW of onshore wind energy capacity will be put out to tender with onshore wind of 15GW/year (up from 10GW) for FY 2027 and FY 2028, 12GW for FY 2029 and 10GW for FY 2030-2032. This adds 12 GW of additional capacity to reach the 115 GW target by 2030. (2) In accordance with the requirements of the grid connection package, new installations will be directed to locations where they do not further exacerbate existing grid bottlenecks during periods of high wind. Distribution network operators can designate certain network sections as bottleneck areas for up to six years. The prerequisite for this is that at least 5% of the annual electricity generation cannot be transported in the area. In such cases, wind farm operators in wind priority areas will no longer receive compensation for 18% of their annual electricity volumes, and in other areas, wind and solar farm operators will no longer receive compensation for 20%. View: Overall, we would see the EEG release as a positive, implying scope for higher onshore wind rollout. Compared to a previous Grids draft package in January 2026, the proposed reduction in support for renewable projects is less severe. The key questions now are how the curtailment changes and changes to grid construction fees will impact auction prices and how much wind development can be moved from the more congested areas to the areas that are less so. We do not see an impact to the 25GW that have already been auctioned historically, but this does impact future

auctions of capacity to meet the targets set out in the EEG. Potentially, the moderated proposals could present some upside; we note they still have to go to parliament over H2. To give context, over FY 2024, Germany made up c.18% of installations for Nordex and c.13% of installations for Vestas.

Valuation & Risks

Vestas: Buy, 12m PT of Dkr263

Investment Thesis, Valuation and Key Risks

We are Buy rated on Vestas. In our view, Vestas is the best-positioned company in our wind manufacturer coverage, set to benefit from rising wind installation demand, with strong fundamentals (cash flow generation, growth, balance sheet) owing to its geographical diversification and scale. We expect margin expansion over FY 2026, de-risking of the offshore ramp up and a stronger picture for volume growth through higher order intake. We forecast Vestas to deliver 90% of its medium-term target in FY 2027 largely driven by the offshore business reaching break-even. With Vestas reaching peak offshore wind capital expenditure, we see FCF expansion into FY 2027. Combined with new targets for capital structure (between +1x and -1x net debt to EBITDA through-the-cycle) and shareholder returns (at least 40% payout for dividends & buybacks), we expect a step up in returns of value over the coming years. Our estimates assume €7bn in cumulative buybacks between FY 2026 and FY 2030. We expect further improvement in margins and higher cash returns which, combined with an uptick in onshore US and German orders into this year, set the stage for a much stronger medium-term outlook and expect the re-rating to continue.

We are Buy-rated on Vestas with a 12-month price target of Dkr263 (from Dkr262), with the increase reflecting our higher estimates and a lower WACC in our DCF. Our valuation methodology (both DCF and M&A) reflects ex-IRA linked US installations. Our valuation methodology is based on a combination of a DCF (85% weighting, Dkr239/share (from Dkr238/share)) and an M&A valuation (15% weighting, Dkr400/share (unchanged)). Our DCF-based valuation equates to a target multiple of c.10x 2030E EV/EBIT. For our DCF valuation, we use a 7.4% post-tax WACC in both the medium and long term. Our M&A valuation is derived by applying an unchanged 22x multiple to 2030E EBIT (on an ex-IRA growth basis) discounted back to 2026E. Our M&A multiple is based on the second-quartile median average M&A multiple for the Industrials sector in Western Europe over the last ten years. We apply the target multiple to 2030E earnings to capture the growth trajectory of the company.

Key downside risks to our view and price target include a decline in global volumes in onshore wind that would likely negatively impact order intake; lower US installations, the absence of M&A in the wind sector that could make our M&A component less meaningful; and a significant decline in commodity prices that would likely make wind less profitable vs. thermal technologies.

Siemens Energy: Buy (on CL), 12m PT of €212**Investment Thesis, Valuation & Risks**

We see Siemens Energy's delivery this year as providing reassurance on fundamental demand tailwinds for the business (datacenter demand, grid capex, energy security), and expect further top-line growth and margin improvement. Beyond FY 2028, our estimates imply more than 60% earnings growth through to FY2030, and a further material acceleration in cash flow. This leaves Siemens Energy trading at a c.6x 2030E EV/EBITDA, with visibility and growth expanding. The growth we expect is driven by: (1) higher OEM volumes and stronger service profitability within Gas Service; (2) strong and long-duration top-line growth in Grid Technologies; and (3) increased focus on offshore wind at Siemens Gamesa. Looking at capital returns, we see scope for more than €25bn to be returned to shareholders out to the end of the decade. We continue to see execution narrowing the valuation gap with GE Vernova (covered by Joe Richie), which trades at broadly twice the multiple of Siemens Energy at c.21x 2028E EV/EBITDA. We are Buy-rated, with a 12m price target of €212.

We are Buy-rated (on CL) on Siemens Energy, with a 12-month price target of €212. Our SOTP-based valuation methodology is based on a peer group CY27E EV/EBITA multiple for Gas & Power of 21.5x. We value Siemens Gamesa using a DCF, in which we use a 7.4% post-tax WACC.

Key downside risks to our investment thesis and price target include: Inability to manage the quality issues emerging in specific onshore wind turbine models, increasing competition and price pressure, failure to deliver cost savings, a weaker economy, and FX and material headwinds.

Nordex: Buy, 12m PT of €52.8**Investment Thesis, Valuation & Risks**

Nordex is benefiting from the same tailwinds we see driving the broader onshore wind turbine industry. At the top line, improved pricing alongside order growth has supported a recovery of margins. Combined, this creates a picture of higher profits and a stronger balance sheet. We see this translating to higher returns of value over time. This could be used for dividends, buybacks, reserves and for investment into the businesses. We expect further improvement in margins and higher cash returns which, combined with an uptick in onshore US and German orders into this year, sets the stage for the company to achieve its medium-term outlook, and we expect the strong share performance to continue.

We are Buy rated on Nordex with a 12-month price target of €52.8 (from €52.6 on higher estimates). Our price target is based on a DCF valuation, for which we use an 8.1% post-tax WACC in the medium and long term.

Key downside risks to our investment thesis and price target include lower global volumes, changes in government policy, and a decline in commodity prices.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DAFCF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Disclosures

Pricing information

GE Vernova (\$950.49), Nordex SE (€39.16), Orsted A/S (Dkr135.35), RWE (€59.30), Siemens Energy (€142.6) and Vestas Wind Systems A/S (Dkr196.15)

The rating(s) for Nordex SE, Siemens Energy and Vestas Wind Systems A/S is/are relative to the other companies in its/their coverage universe:

Acciona Energia, Centrica, Drax Group, E.ON, EDP Renovaveis SA, Elia Group, Enagas, Endesa SA, Enel SpA, Energias de Portugal, Engie, Fortum OYJ, Iberdrola SA, National Grid Plc, Naturgy Energy Group, Nordex SE, Orsted A/S, Pennon Group, Public Power Corp., RWE, Redeia, SSE Plc, Severn Trent Plc, Siemens Energy, Snam SpA, Solaria, Terna, United Utilities Group, Veolia Environnement, Vestas Wind Systems A/S

Company-specific regulatory disclosures

The following disclosures relate to relationships between The Goldman Sachs Group, Inc. (with its affiliates, "Goldman Sachs") and companies covered by Goldman Sachs Global Investment Research and referred to in this research.

Goldman Sachs has received compensation for investment banking services in the past 12 months: Nordex SE (€39.16) and Siemens Energy (€142.60)

Goldman Sachs expects to receive or intends to seek compensation for investment banking services in the next 3 months: Nordex SE (€39.16), Siemens Energy (€142.60) and Vestas Wind Systems A/S (Dkr196.15)

Goldman Sachs had an investment banking services client relationship during the past 12 months with: Nordex SE (€39.16), Siemens Energy (€142.60) and Vestas Wind Systems A/S (Dkr196.15)

Regulatory disclosures**Disclosures required by United States laws and regulations**

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; registered market maker. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at <https://www.gs.com/worldwide/brazil/area/gir/index.html>. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research

Analyst – SEBI Registration Number INH000001493, 10th Floor, Ascent-Worli, Sudam Kalu Ahire Marg, Worli, Mumbai-400 025, India, Corporate Identity Number 60634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. Registration granted by SEBI and certification from NISM in no way guarantee performance of the intermediary or provide any assurance of returns to investors. Goldman Sachs (India) Securities Private Limited compliance officer and investor grievance contact details, a copy of the annual compliance audit report and other relevant information and disclosures can be found at this link: <https://www.goldmansachs.com/worldwide/india/research-analyst>. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for “professional investors” within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither “registered banks” nor “deposit takers” (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for “wholesale clients” (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom’s departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at <https://www.gs.com/disclosures/europeanpolicy.html> which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, and Investment Management Association of Japan. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock’s total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region’s Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts’ investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at <https://www.gs.com/research/hedge.html>.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs’ involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.

Global product; distributing entities

Goldman Sachs Global Investment Research produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; Public Communication Channel Goldman Sachs Brazil: 0800 727 5764 and / or asil@gs.com. Available Weekdays (except holidays), from 9am to 6pm. Canal de Comunicação com o Público Goldman Sachs Brasil: 0800 727 5764 e/ou asil@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom.

Goldman Sachs International (“GSI”), authorised by the Prudential Regulation Authority (“PRA”) and regulated by the Financial Conduct Authority (“FCA”) and the PRA, has approved this research in connection with its distribution in the United Kingdom.

European Economic Area: Goldman Sachs Bank Europe SE (“GSBE”) is a credit institution incorporated in Germany and, within the Single Supervisory Mechanism, subject to direct prudential supervision by the European Central Bank and in other respects supervised by German Federal Financial Supervisory Authority (Bundesanstalt für tungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research within the European Economic Area.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (<https://www.sipc.org>).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage universe as described herein.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, make a market or act as liquidity provider in, and buy or sell, any securities, derivatives, or other financial instruments referred to in this research (including any financial instruments issued by the companies referred to herein), unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at <https://www.theocc.com/about/publications/character-risks.jsp> and https://www.goldmansachs.com/disclosures/cftc_fcm_disclosures. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to <https://research.gs.com>.

Disclosure information is also available at <https://www.gs.com/research/hedge.html> or from Research Compliance, 200 West Street, New York, NY 10282.
