CH Battery: D/G CATL-H to N, JP Auto on EU-CH Headline, Hyundai Rotem Review

Joann Kim
+852 2800 8016
joann.kim@jpmorgan.com

US equities rallied as semis bounced after last week's drawdown, with the move starting in Korea where memory names rebounded ~+5–6% and then carried into the US session. Higher US yields (France spillover) drove a rotation back into AI vs non-AI, with SPX +0.4% vs SPW -0.3%. Under the hood, Momentum +1.2% and Crowded Longs +1.1% outperformed (Shorts +0.1%); VIX fell -1.6 to 18.4 after Friday's spike, and volumes were light (-11%/-13% vs 5d/20d) into a heavy catalyst week. Our APAC pad starting the day as better to buy on light volumes; led by passive flow in Japan and active buying in TW semis, KR bio & Defense.

Flagging Rebecca Wen's downgrade and estimate cut across China battery & supply chain factoring in policy changes (battery consumption tax, lower export VAT rebates & rising trade barriers). We cut CATL 26/27 NP estimate to 89bn RMB/99.7bn RMB (6%/15% below Cons) & 0.08 RMB/Wh unit profit in 2027 and downgrade CATL-H to Neutral (Keep CATL-A at OW). Our new estimate is 6%/15% below 2026/2027 NP consensus for CATL and 30-50% below the consensus for tier 2 battery makers. Join Rebecca Wen's CATL 3Q review call tomorrow at 4pm HKT (Mandarin)/8pm HKT (English).

Hyundai Rotem's 3Q26 results were largely in line with JPME. Defense OPM surprised positively on cost write-backs tied to strong Poland K2 deliveries; however, management guided 2027 defense sales to be flattish y/y but with weaker OP on mix (higher domestic share, lower Poland EC2 GF) and delayed new export orders. Simon sees ~24% downside risk to Street 2027 OP on order timing and keeps Neutral / Dec-27 PT W110k until there is clearer new-order progress. Investor feedback was muted and turned increasingly negative post call on 2027E mix deterioration, with some pointing out the stock is effectively trading at >15x 2027E P/E, making it not cheap, despite ~50% YTD pullback.

- **CH Battery:** Profit-pool rebalancing: CATL may take the first hit, but gain the most; D/G CATL-H, CALB, EVE, Wuxi-A/H and Putailai - Rebecca Wen
- **Japan Auto/Parts:** European Commission agrees to enact auto-related bill including (P)HEV import regulation in 2026: Implications for Japan's automakers - Akira Kishimoto
- **Hyundai Rotem (064350 KS):** 3Q OP In-line; robust defense OPM a relief, but 2027 earnigns concern still needs to be addressed; maintain Neutral - Simon Han
- **CATL 3Q26 Results Today:** JPM is providing Eng SI translation to its earnings call at 8pm HKT:Self-registration link – click here.

Detailed Highlights

China Battery: Profit-pool rebalancing: CATL may take the first hit, but gain the most; D/G CATL-H, CALB, EVE, Wuxi-A/H and Putailai - Rebecca Wen

- Battery stocks have materially underperformed and **we are shifting the call from volumes to earnings—our concern is that industry profitability is deteriorating faster than expected** even though we still forecast global EV+ESS battery demand growth of 20–25% in 2027 (above market).

- **We cut earnings across the battery value chain and downgrade several names:we are now Neutral/Underweight on all tier-2 cell makers**, materials and equipment under coverage, and **we downgrade CATL-H to Neutral** while keeping CATL-A as the only OW in our battery universe.
- **The key driver for our earnings cut & downgrade is policy/returns pressure (battery consumption tax, lower export VAT rebates, and rising trade barriers) hitting when OEM profitability is already weak;** we estimate the two battery tax policies alone could exceed Rmb100bn in 2027 (Auto OEM's export VAT rebate cut not included in our forecast yet), and we expect the burden to migrate upstream and across the value chain. CATL may take the first hit but could emerge stronger via consolidation and higher switching costs.
- **Even assuming CATL absorbs the full recent tax impact, we estimate CATL can still earn Rmb0.08/Wh in 2027** (>Rmb0.10/Wh under tier-2 accounting), with financial resilience becoming an increasingly important moat. Longer term, the next bull case will likely come from value-creating technologies (sodium-ion, battery swapping) rather than outright price cuts. We cut CATL's 2026/2027 NP by 6%/14%, and our new estimate is 6%/15% below consensus. and 30-50% below street consensus for 2nd tier battery makers.
- **Investor Feedback & Sales view**: We are seeing an increased number of inbounds on CATL asking, "when is the right time to bottom-fish CATL?", as most negatives appear to be in the price (potential 3Q26 earnings miss, deceleration in domestic ESS sales, and tax policy changes), with the stock trading at a down-cycle valuation (~11x 2027E P/E). However, we note investor sentiment has deteriorated over the past two weeks, with key focus shifting to CATL's unit profitability decline outlook; investors are now discussing 2027 unit profitability in a ~RMB0.08–0.09/Wh range (Rebecca's new estimate is towards the low end), with additional headline risk from China OEM export VAT cuts where battery makers are expected to share the burden.
- **CATL 3Q26 Results Today:** JPM is providing Eng SI translation to its earnings call at 8pm HKT:Self-registration link – click here.

Japan Auto/Parts: European Commission agrees to enact auto-related bill including (P)HEV import regulation in 2026: Implications for Japan's automakers - Akira Kishimoto

- EU countries agreed to enact the broader automotive legislation in 2026 (covering (P)HEV import regulation, IAA incentive eligibility, and 2035 CO_2 targets). If imports are ultimately capped at ~350k units/year (as previously reported), **Japan OEMs' Europe HEV sales could benefit, but diversion risk rises**—vs ~800k (P)HEVs expected from China in 2026, a **2027 allocation system could redirect ~450k units to SE Asia/Australia/LatAm**, potentially **intensifying competition for Mazda and Mitsubishi**, while Toyota should be relatively more resilient on HEV mix/brand.
- Separately, **Germany/France agreed** (pending EC approval) on easing 2035 CO_2 rules (scrapping offset conditions) and on **IAA incentives, potentially conditionally including the UK**; **if the UK adopts countervailing duties**, "Made in EU" preferences could benefit **Toyota and Nissan** given their UK manufacturing/engineering footprint.
- **Investor Feedback:** Investordiscussion on Toyota is picking up again on EU policy headlines around Chinese OEMs, the potential RAV4 ramp towards year-end (Nov–Dec), and its upcoming MTP (early-2027), while the stock trades at an undemanding valuation. On the other hand, sensing deteriorating sentiment on Suzuki Motor, with investors seeing limited upside after the stock's outperformance and viewing risk/reward as less favorable.

Hyundai Rotem (064350 KS): 3Q OP In-line; robust defense OPM a relief, but 2027 earnigns concern still needs to be addressed; maintain Neutral - Simon Han

- **Rotem's 3Q26 OP was broadly in line with our expectations**, with weaker recognizable defense sales mainly due to FX, but defense OPM surprised positively on cost write-backs tied to strong Poland K2 deliveries (46 units in May–Jul, plus another 12 units in Aug–Sep), which should help keep export margins resilient.
- **Management guided 2027 defense sales flattish y/y but weaker OP on mix** (higher domestic share, lower Poland EC2 GF) and **delayed new export orders, with PL localization potentially pulled forward to 2H27**; pipeline timing remains pushed out (Peru budget process, Poland EC3/tech-transfer scope, Romania politics, Iraq delays). **We see ~24% downside risk to Street 2027 OP on order timing and keep Neutral/Dec-27 PT W110k until clearer new-order progress**.
- **Investor Feedback**: Increasingly negative feedback post the earnings call, with some investors seeing downside risk to 2027E OP of more than 30% vs current Street estimates, which could leave the stock trading at >15x 27E P/E. Investors also note land systems defense spending allocation looks less favorable vs aero/navy. While there is still little appetite to engage on either side of the trade for now, the general view is this is more of a "short on any pop" than a "buy on a dip."

Sector Key Newsflow

- DATA CENTERS(*): 2027 global buildout to accelerate with +50GW capacity, driven by $1T+ in lease contracts and modular designs => SemiAnalysis forecasts a record surge in datacenter construction, supported by unprecedented leasing and self-build activity, with power and labor constraints largely mitigated; this sets up material revenue acceleration for AI labs and suppliers, while raising the risk of future chip shortages and capital market impacts.
- ECOPRO BM(247540)(+): Ecopro BM is accelerating vertical integration by investing W765bn from its recent rights offering into an Indonesian nickel smelter and W121.1bn into its Hungary plant, aiming to secure stable nickel supply and enhance cost competitiveness for high-nickel cathode materials. The smelter, a joint project with PT Vale Indonesia, will have an annual capacity of 90,000 tons. The 103.25% subscription rate reflects strong shareholder confidence in the company's term growth.
- **PANASONIC (6752)** – Plans to commercialize recycling for glass-integrated perovskite solar cells in FY2029, targeting +80% glass recovery ahead of mass production around 2030, Nikkei.
- **HITACHI (6501)** – Co and Tokyo Gas will jointly develop data centers combining renewable power and battery storage, targeting earlier deployment without waiting for grid expansion, Nikkei.
- **SUMITOMO ELEC (5802)** – Opened a Y70bn subsea power cable plant in the UK, its first in Europe, with production starting in summer 2027 to capture growing offshore wind demand
- **KHI (7012)** – Co is accelerating development of autonomous humanoid robots using domestic AI technology, targeting commercialization by 2030 and collaborating with rivals on physical AI, Nikkei.
- **MITSUBISHI MOTORS (7211)** – Resumed Pajero sales in Thailand and plans to export the locally produced SUV to Australia and Japan during FY26, Nikkei.
- US/China - The Trump administration banned US agencies from using DeepSeek products over China security concerns, while the US announced $12bn in deals to boost its presence in Central Asia and counter China and Russia.
- China Export Control - China expanded export restrictions on specific unmanned aerial vehicles, components, and related technologies to safeguard national security and interests. The ministry will also optimize and adjust export control measures for a range of industrial machinery including tunneling machine-related items and dredger-related items.
- CATL (3750)- Huawei, CATL, and Times Electric signed a strategic partnership to build an intelligent battery swap ecosystem for autonomous driving, aiming to deliver seamless energy solutions.
- Li Auto (2015) - Li Auto's CEO emphasized the importance of automakers deeply researching battery tech for industry and consumer benefit, aiming for Li Auto to become a leader in battery expertise ahead of its Power Day tech event on Oct 20.
