Humanoid Robot & Physical AI

Robotics tour takeaways: CIIF 2026—Ecosystem demand, workflow integration, and what's next for the sector

Physical AI is moving from concept discussion to early deployment exploration, as evidenced by the 2026 China International Industry Fair (CIIF), where we led an expo tour on 13-14 October. Unlike earlier humanoid robot exhibitions that were more focused on body kinetics, locomotion control and foundation model performance demos, CIIF had a clear manufacturing/industrial application focus. Humanoid robot OEM exhibitors including Unitree, UBTech and Agibot showcased more practical use-case demos at their booths, echoing the broader tone of the Industry Fair. In our conversations with players across the supply chain, the discussion was less about whether robots can dance, walk or maintain balance, and more about whether the ecosystem can solve real bottlenecks around perception consistency, manipulation reliability, data quality, component cost-down, scenario-specific deployment and ROI validation. This direction also looks consistent with recent policy signals, and it supports our long-term bullish stance on the sector's multi-year runway as volumes scale. That said, we still see the industry in an early commercialization stage, where management teams sound more constructive on robotics/Physical AI demand than on traditional industrial automation, but also acknowledge that broad-based factory or household deployment still needs further validation and repeatability proof.

The sector's long runway still looks attractive, but CIIF reinforced that near-term winners will be the "industrialized enablers," not necessarily the most visible humanoid OEM. We remain constructive on the multi-year Physical AI and humanoid robotics opportunity, but CIIF reinforced how selective the transition to mainstream deployment will be. Even for leading Chinese OEM booths, the more functional humanoid demos—picking up objects, sorting, basic handling, and inspection-style tasks—still looked slower and less precise than what factories already achieve today with an industrial robot plus AI solution in controlled lines, which raises the bar for near-term ROI and repeat orders. In this setup, we see near-term monetization skewing toward supply-side expansion—perception hardware (sensor/camera), data-collection devices, transmission components (reducer/roller screw), dexterous hands, and pilot deployment tooling—rather than the immediate emergence of killer applications on the demand side.

Stock view: Our CIIF tour takeaways favor names with clearer near-term order and shipment visibility, while parts of the China humanoid complex have moved more quickly when catalysts bring the theme back into focus. We revise our preference order as: **Hengli Hydraulic = Sanhua Intelligent (both OW) > Leader Drive (OW) > Orbbec (OW) > UBTech (N) > Estun = Unitree (both UW)**, with Hengli Hydraulic and Sanhua Intelligent as preferred "Tesla bot supply chain + solid non-bot fundamentals" exposure, Leader Drive as the name where we came away more constructive after engaging with its general management team at CIIF, and Orbbec staying OW on technology positioning, but with near-term earnings expectations looking stretched and potential for further estimate cuts.

CIIF 2026 showed the sector is moving from concept discussion to early deployment exploration, and that shift is changing what matters to investors

CIIF highlighted that the industry's "new debate" is about system bottlenecks, not single-point demos, which will separate scalable platforms from one-off showcases

CIIF felt meaningfully different from earlier humanoid-focused exhibitions: The center of gravity moved away from "how smooth is the gait" and toward "how stable is the workflow." Unitree, UBTech and Agibot all showcased more practical industrial demos—inspection-style tasks, handling, and scenario-led prototypes—rather than pure kinetic demonstrations. The most frequent questions we heard were around perception consistency, manipulation reliability, calibration stability, data quality, deployment tooling, and ROI validation, which is exactly the bundle of constraints that shows up when you try to run a robot for hours, not minutes. This is why we remain long-term constructive on Physical AI: The ecosystem is progressing from lab logic to industrial logic. However, this is also why the near-term burden of proof rises quickly—once conversations shift to uptime and payback, "cool demos" stop carrying valuation on their own, and execution discipline starts to matter more than ambition.

The demand pulse feels real, but it still looks like "building the stack," rather than "deploying the fleet," and that distinction will keep the market selective

Across meetings, demand sounded constructive, but the structure matters. Most current demand appears tied to R&D expansion, data collection, developer platforms, small-batch pilots, component stocking, and early industrial validation, rather than broad-based fleet deployment from end users. This demand mix can still be strong and sustained in the near term because the ecosystem can spend heavily on tools and components before factories or households commit to scaled deployments. The key swing factor is conversion: The sector needs pilots to become repeat orders with measurable ROI, and the timeline for that conversion remains uneven across scenarios. This is why "momentum" can remain positive while "quality" evolves. Investors are likely to reward segments with clearer order visibility and repeatability and to penalize areas where demand relies mainly on narrative and one-off project wins.

Data acquisition is emerging as the most monetizable bridge before general-purpose intelligence breaks through, and CIIF showed the ecosystem actively organizing around that reality

Data came up in nearly every discussion, and not as a buzzword. Management teams framed data as both the bottleneck and the opportunity, because better data pipelines directly translate into better task performance and faster iteration cycles. Multiple players highlighted the practical split between human data and real robot data, with human data offering a cheaper path to scale, while real robot data remains the highest-quality, but most scarce, source. This supports an investable near-term monetization pathway: Sensors, gloves, hands, calibration tools and data-collection modules can sell meaningfully even while end-user deployments remain early. The uncomfortable truth we heard repeatedly is that even strong "brain capability" still needs scenario data, calibration and reliable sensors/hands to translate intelligence into consistent task execution. That keeps the "tools for data" layer in focus and supports why shovel-seller economics are poised to emerge earlier than OEM economics.

Dexterous hands are increasingly the practical bottleneck behind real industrial usefulness, and early adoption is converging on reliability and cost-performance, rather than maximum specs

CIIF conversations suggested the hand roadmap is becoming more pragmatic. The industry broadly agrees that dexterous hands and force control are gating items for meaningful industrial tasks, but near-term adoption is not moving toward "maximum DoF at any cost." Instead, industrial customers are prioritizing solutions that balance reliability, lifecycle and

cost-performance because factories measure success by uptime and consistency. We heard the mechanism debate framed around linkage-driven, tendon-driven and direct-drive approaches, with early industrial traction skewing toward designs that can survive repetitive cycles and maintain stable control. Tactile sensing is increasingly viewed as necessary for force feedback in precision manipulation, but technology routes have not fully converged, which adds uncertainty to timing and standard-setting. The investor implication is that hands can become both a bottleneck and a monetization path, but early winners will likely be those who industrialize manufacturability, serviceability and consistent output—not those who only win on "demo dexterity."

The "brain" race is shifting from bold statements to iteration speed and closed-loop deployment, and that shift raises the bar for OEM differentiation

The most consistent "brain" message at CIIF was that embodied intelligence is not one breakthrough moment; it is a grind through data scale, scenario iteration and closed-loop deployment. We saw clearer strategic divergence: Some OEMs are leaning into a hardware-platform posture and relying on partners for vertical algorithms, while others are investing more heavily into model and data infrastructure to own more of the value chain. Across conversations, people highlighted that model performance alone is not enough without the right sensor stack, calibration and high-quality scenario data, which reinforces why "brain power" increasingly includes the ecosystem plumbing around the model. This raises the near-term bar for OEMs: If they cannot show a credible path to repeatable task performance and deployment economics, they will risk being valued like a body supplier in a deflating hardware layer. The market is poised to reward the players that can demonstrate faster iteration, better integration and more repeatable outcomes in customer workflows.

Compute constraints are starting to separate "who can iterate" from "who can only demo," and the edge-vs.-cloud split is becoming a real product decision

CIIF discussions made it clear that compute is a gating factor in two different ways. On the training side, only a limited group can fund sustained, large-scale training and reinforcement loops, which drives iteration speed and the ability to generalize across scenarios. On the inference side, edge compute and low latency matter once you step into industrial tasks where reaction time, stability and safety become measurable KPIs. That creates a real architecture debate: how much to run on-device vs. how much to call from the cloud, and how to manage latency and reliability across those modes. This dynamic also shapes commercialization sequencing: Controlled B2B deployments can engineer around connectivity and compute budgets more effectively, while 2C environments raise the bar sharply on safety, cost and robustness. The practical takeaway is that compute intensity becomes a competitive differentiator, but it also becomes a cost and integration burden that weaker players may struggle to carry.

Battery, runtime and thermal realities are quietly driving what can scale, and they help explain why "industrial first" keeps winning the commercialization sequence

Power and runtime constraints came through repeatedly as hidden limiters behind impressive booth demos. Some configurations can run for c.2 hours continuously, which is workable for demonstrations and certain training loops, but becomes binding in continuous industrial operations unless charging and workflow integration are engineered into deployment plans. Thermal management and energy density also matter because higher compute loads and more capable actuation raise heat and power draw, especially when robots move from staged tasks to repetitive work cycles. These constraints reinforce why industrial deployment is poised to remain the first wave: Factories can design around battery swaps, charging windows and constrained task sets, while household environments are less structured, safety tolerance is lower, and consumer ASP sensitivity is higher. This also keeps component demand tied to enabling technologies—power management, thermal solutions and system integration—rather than a straight-line ramp in general-purpose humanoid unit volumes.

Reducer and actuation choices are becoming scenario-led, rather than ideology-led, which is why harmonic vs. planetary vs. cycloidal vs. screw is now an investable debate
CIIF conversations suggested the market is splitting by scenario: Harmonic remains preferred where precision, torque density and compactness are non-negotiable, often in upper-limb and fine motion requirements, while planetary and cycloidal are gaining attention where robustness, shock tolerance and cost-performance dominate, often in load-bearing and harsher conditions. The screw-based discussion is also getting louder, especially where linear actuation, speed/explosiveness or architecture experimentation matters, which naturally links into suppliers with ball/roller screw capability and into the broader "content shift" inside each joint. The key takeaway is that the future likely will not crown one winner architecture; instead, it will reward suppliers that can support multiple architectures, deliver consistent quality at scale, and keep driving cost-down as OEM ASPs decline. This also raises the importance of manufacturability and specialized equipment, because scaling precision components quickly can become the real bottleneck, not the blueprint.

The "eyes" battleground is moving from peak spec to consistency and calibration, and the competitive set is fragmenting by scenario, rather than converging to one winner
Across CIIF discussions, perception increasingly looked like an integration and consistency problem, rather than a single-device spec competition. Customers repeatedly emphasized stability over time, x-y consistency under lighting changes, latency, calibration drift and integration friction when sensors are deployed across multiple robot positions. That is where calibration workflows and multi-sensor alignment become moats, and it is also why the camera vs. LiDAR vs. hybrid debate remains scenario-dependent: Low-cost LiDAR can work for coarse navigation and avoidance, while richer 3D stacks matter for close-range manipulation and data collection. This suggests that perception remains one of the clearest near-term demand pockets, but competitive intensity remains high because product cycles are fast and use cases are diverse. Winners are poised to be those that can industrialize calibration, broaden product lines responsibly, and sustain consistency at scale while keeping costs down.

Unitree, UBTech and Agibot signal different playbooks, and the market is poised to differentiate them based on who can own repeatability and economics, not just exposure
CIIF highlighted that OEM strategies are diverging quickly. Unitree leaned into a hardware-platform posture—make the body robust and open the ecosystem—explicitly acknowledging that OEMs cannot internalize every industry process, which invites SI (system integrator) and industrial partners to do verticalization. UBTech and Agibot leaned more heavily into the "brain + data + deployment" direction in their messaging, emphasizing data infrastructure and scenario validation as the path to sustainable value capture. This divergence matters because the value pool is shifting upward: If the "brain + deployment" layer captures more economics over time, platform-only OEMs risk being valued more like hardware suppliers unless they build higher value layers. In the global competitive set, conversations continue to benchmark against Tesla bot and Figure AI on scaling credibility and data flywheel intensity, while Boston Dynamics remains a reference for mobility reliability. The practical investor implication is that OEMs will not be valued equally; the market is poised to reward repeatable workflow outcomes and economics, rather than brand visibility alone.

Orbbec's CIIF messaging leaned into data-collection tooling and multi-route perception, and that approach is poised to show clearer near-term monetization than a single-product strategy
Orbbec's updates were notable on both demand and product strategy. Management highlighted meaningful robotics-related order momentum and framed data-collection devices as a growing bridge product, with sensor stacks configured across head, wrist and body positions that customers use to generate and clean training data. Management also

emphasized a multi-route approach—structured light, stereo, iToF, dToF, plus different form factors—because downstream scenarios require different "eyes" at different positions and latency/precision trade-offs vary by workflow. This positioning focuses attention on breadth, calibration capability and scale, rather than claiming one "best" sensor. The competitive context also looked clearer: Some peers are more concentrated in high-precision industrial arm scenarios, while Orbbec is pushing a broader robotics footprint that includes mobile/service robots, which can help volume scaling earlier. The investor implication is that the "tools for data + diversified perception" strategy can monetize even while OEM deployments remain early.

Leader Drive's CIIF discussion strengthened the "shovel seller" case because management framed Physical AI as measurable incremental growth with a multi-year scale plan

We came away more constructive on Leader Drive after meeting its general management at CIIF, mainly because management described Physical AI demand as already material and scaling, not theoretical. Management framed Physical AI as a meaningful contributor to incremental growth and emphasized that this demand dynamic is increasingly decoupling from the traditional industrial capex cycle, which supports a longer runway for precision transmission components. The product roadmap also stood out: Management discussed expansion beyond harmonic reducers into planetary, cycloidal, joint modules and broader precision transmission offerings, which aligns with the architecture diversification we heard across the ecosystem. Competition remains real, including low-end challengers and pricing pressure, but management focused on defending positioning through product capability, customer qualification and manufacturability at scale, rather than fighting purely on price. The practical takeaway is that this is one of the few conversations that sounded like scaling execution, rather than just sector optimism.

Why did domestic robotics supply chain share prices move over the past two trading days post-CIIF?

Tesla bot headlines became the spark, but the near-term price response in Chinese OEMs looked more like sentiment and fund-flow than a fundamentals reset

The catalyst for the past two trading days was the renewed Tesla bot newsflow into the 21 October event window, which pulled attention back to "Physical AI scaling" and triggered a fast risk-on rotation. That said, the way the tape behaved in China looked more like a sentiment/fund-flow move than a step-change in near-term order proof for Chinese humanoid OEMs. Post-CIIF, investors appeared to buy liquid beta first, rather than wait for incremental evidence that pilots are converting into repeatable, ROI-backed orders. That pattern fits what we heard at CIIF: The sector is moving in the right direction, but most OEM deployments remain early and scenario-specific, and the ecosystem still needs to prove reliability, serviceability and unit economics as pricing keeps falling. In this setup, OEM rallies can reverse quickly if the next set of proof points do not follow.

The market's first reaction was to chase high-beta China "Physical AI proxies," but our "where to buy" bias still tilts toward Tesla bot supply chain names with strong non-bot fundamentals

The past two trading days showed a clear sequencing: Orbbec rose 30% and Leader Drive rose 14%, while the broader China complex also rebounded (Chinese IA average c.10%, UBTech 10%, Estun 9%, Sanhua Intelligent-A 8%, Hengli Hydraulic 5%, Inovance 3%). This looks consistent with a "beta grab" into the most liquid theme names, including some that are not viewed as core Tesla bot supply chain exposure. From a stock-view standpoint, we prefer leaning into names that can absorb volatility even if humanoid timelines slip, which is why we continue to prefer Tesla bot supply chain names with resilient base businesses—Sanhua Intelligent and Hengli Hydraulic—rather than chasing OEM beta where near-term

fundamentals remain harder to underwrite. Put differently, the catalyst may be Tesla, but the best risk-adjusted exposure remains the companies that can compound without needing perfect robot execution.

Within the China robotics supply chain, Leader Drive remains our preferred way to express the theme, followed by Orbbec, because CIIF reinforced clearer monetization pathways vs. most OEMs

The post-CIIF move reinforced the market's instinct to rotate into component and perception "shovel sellers," but we would still rank quality within that cohort. Leader Drive remains our top preference because we came away more constructive after meeting its general management at CIIF, with the discussion framing Physical AI as measurable incremental growth and emphasizing multi-year capacity planning and product line broadening across transmission solutions. Orbbec remains our next preference because CIIF conversations reinforced that near-term demand is increasingly tied to perception hardware plus data-collection tooling, which can monetize earlier than broad OEM fleet deployment. In contrast, most Chinese OEMs still need to prove repeatability, margin durability and scalable deployment economics as the sector shifts from "body" to "brain," and the current rebound therefore looks poised to remain headline- and flow-driven until those proof points show up in a more sustained way.

Source: Bloomberg Finance. L.P., J.P. Morgan estimates for covered names. Priced as of 20 October 2026 close.

Analyst Certification: The Research Analyst(s) denoted by an "AC" on the cover of this report certifies (or, where multiple Research Analysts are primarily responsible for this report, the Research Analyst denoted by an "AC" on the cover or within the document individually certifies, with respect to each security or issuer that the Research Analyst covers in this research) that: (1) all of the views expressed in this report accurately reflect the Research Analyst's personal views about any and all of the subject securities or issuers; and (2) no part of any of the Research Analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the Research Analyst(s) in this report. For all Korea-based Research Analysts listed on the front cover, if applicable, they also certify, as per KOFIA requirements, that the Research Analyst's analysis was made in good faith and that the views reflect the Research Analyst's own opinion, without undue influence or intervention.

All authors named within this report are Research Analysts who produce independent research unless otherwise specified. In Europe, Sector Specialists (Sales and Trading) may be shown on this report as contacts but are not authors of the report or part of the Research Department.

Important Disclosures

Company-Specific Disclosures: J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Important disclosures, including price charts and credit opinion history tables (if applicable), are available for compendium reports and all J.P. Morgan–covered companies, and certain non-covered companies, by visiting https://www.jpmm.com/research/disclosures, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, https://www.jpmorganmarkets.com.

J.P. Morgan Equity Research Ratings Distribution, as of October 03, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	35%	12%
IB clients**	83%	81%	72%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	93%	88%

***Please note that the percentages may not add to 100% because of rounding.**
****Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.**
For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation

are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, http://www.jpmorganmarkets.com. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:
A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of http://www.jpmorganmarkets.com where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to UK MIFID Research Unbundling exemption for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Digital assets, which may also be referred to as virtual or crypto assets or crypto currencies (e.g. bitcoin), discussed in this research report are subject to a rapidly changing regulatory landscape. The application of relevant laws in respect of such assets may be unsettled, and the legality of any digital asset investment may be unclear. Prior to making any investment decision regarding any digital asset, investors should seek their own legal advice and be aware of any legal considerations regarding the purchase, holding or selling of such an investment. For relevant regulatory advisories on digital assets, including bitcoin and ethereum, please see https://www.jpmorgan.com/disclosures/cryptoasset-disclosure.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit https://www.theocc.com/components/docs/riskstoc.pdf for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future

become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Notification for Credit Ratings: If this material includes credit ratings, such credit ratings provided by Japan Credit Rating Agency, Ltd. (JCR) and Rating and Investment Information, Inc. (R&I), are credit ratings provided by Registered Credit Rating Agencies (credit rating agencies registered under the Financial Instruments and Exchange Law of Japan (FIEL)). With respect to credit ratings that are provided by credit rating agencies other than JCR and R&I and have no stipulation that such credit ratings are provided by Registered Credit Rating Agencies, this means that such credit ratings are Non Registered Ratings (credit ratings provided by credit rating agencies not registered under the FIEL). Among the Non Registered Ratings, with respect to those credit ratings provided by S&P Global Ratings (S&P), Moody's Investors Service (Moody's), or Fitch Ratings (Fitch), prior to making investment decision based on such Non Registered Ratings, please carefully read the "Explanation Letter regarding Non Registered Ratings" for the corresponding credit rating agency, which we separately have sent or will send.

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

Unless specified to the contrary, this material is distributed in the UK by JPMS plc and is directed in the UK only to: (a) persons having professional experience in matters relating to investments falling within article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) (Order) 2005 ("the FPO"); (b) persons outlined in article 49 of the FPO (high net worth companies, unincorporated associations or partnerships, the trustees of high value trusts, etc.); or (c) any persons to whom this communication may otherwise lawfully be made; all such persons being referred to as "UK relevant persons". This material must not be acted on or relied on by persons who are not UK relevant persons. Any investment or investment activity to which this material relates is only available to UK relevant persons and will be engaged in only with UK relevant persons. A description of J.P. Morgan EMEA's policy for prevention and avoidance of conflicts of interest related to the production of Research can be found at the following link: J.P. Morgan EMEA - Research Independence Policy.

U.S.: J.P. Morgan Securities LLC ("JPMS") is a member of the NYSE, FINRA, SIPC, and the NFA. JPMorgan Chase Bank, N.A. is a member of the FDIC. Material published by non-U.S. affiliates is distributed in the U.S. by JPMS who accepts responsibility for its content.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.
