CITI'S TAKE

Renewables remain out of favor amid higher interest rates, policy uncertainty, and rising costs. However, robust underlying demand appears increasingly disconnected with weak equity market sentiment. Utility-scale solar safe harbor volumes of ~240GW, combined with a 14% Y/Y increase in crew counts in September, point to strong activity both in the NT and LT across the sector. We believe this disconnect creates an attractive opportunity to gain exposure through high-quality names without moving further up the risk curve. We see a favorable setup for NXT and a low bar for FSLR heading into 3Q26. In residential solar, we expect another round of estimate reductions during the quarter. But trough estimates and equity prices appear to be in sight and stabilization in interest rates may change the sentiment. In nuclear, a lack of tangible NT catalysts and continued equity issuances are likely to cap share-price performance.

Utility Scale — The interest-rate driven dislocation has created a compelling opportunity to own high-quality utility-scale solar names such as FSLR and NXT. We see little evidence of a slowdown and continued strong fundamentals. Up to 240GW of projects have been safe harbored, per Wood Mackenzie, which provides a multi-year growth runway, as PPAs adjust for higher equipment costs. On the political front, potential Democrat advancement in Congress could provide a sentiment boost, though this may be short lived as any near-term tax credit changes would require bipartisan support.

Favorable Set Up — NXT appears to have a favorable set-up this quarter. Zimmermann is not in the FY27 guide and should close by the CMD, GM estimates look derisked, and inverter bookings should ramp ahead of planned >10GW of US capacity by summer 2027. We expect strong buyback activity in F2Q27.

Residential Solar — The rout in residential solar appears to be in final stages, as higher interest rates are reflected in the U.S. app downloads in 3Q and 4Q (Figure 23). In EU, ENPH saw typical seasonality in 3Q, while SEDG appears to have gained market share, but this matters less as a portion of total revenues. Tangible progress on SST pilots at customer sites will be in focus, with SSTs currently the only credible re-rating catalyst for the group amid an uncertain rates environment. We expect another round of estimate reductions for RUN, ENPH and SEDG with 3Q results.

Nuclear — A recovery in nuclear is difficult to envision given persistently high supply of equity, unclear underlying economics and difficulty in discerning winners in a crowded field. SMR remains our least preferred name in the group.

Positioning — Crowded longs include GNRC (Long: 95.7%, Short: 11.5%) and BE (Long: 88.1%, Short: 3.1%) per Citi's data (Figure 36). FSLR saw a dramatic rotation since 06/26, with long crowding declining from 71.9% to 17.9% vs short crowding increasing from 32.6% to 92.3%. Crowded shorts include RUN and ARRY with short crowding of 90.3% and 86.8%, respectively. Two-way positioning is notable in SEDG (Long: 65.8%, Short: 67.5%) and PLUG (Long: 66.5%, Short: 52.5%).

See Appendix A-1 for Analyst Certification, Important Disclosures and Research Analyst Affiliations.

LT Ranking Table for Companies Under Coverage

Our ranking of most to least preferred names along with the key items to watch for each name are shown below. Please note that the LT stock ranking table indicates our preference for stocks beyond this earnings season.

Figure 4. Top Picks (Ranking, Opportunities, and Risks)

	Ticker	Opportunities	Risks
Buy	FSLR	(1) Conversion of the >2GW of US deals waiting on conditions precedent (2) US ASP vs prior bookings of ~1.9GW at $0.36/W (3) Malaysia/Vietnam utilization (~$30mm/qtr of cost) (4) South Carolina finishing capacity ramp (up to 3.5GW) (5) Potential capital return commentary as 45X credit visibility builds	(1) Warehousing related costs of ~$200mm/year (2) Freight costs at 2.3¢/W (domestic freight on par with ocean freight) (3) Booking discipline keeping volume growth muted near-term (4) Section 301 investigation into overcapacity in Malaysia/Vietnam (5) Competitive pressure from TSLA (planned 100GW of capacity)
	NXT	(1) CMD targets with revenues, earnings, and new product categories a "couple years ahead of schedule" (2) Apex inverter bookings given planned >10GW of US capacity by mid-2027 (3) Buybacks vs ~$500mm of repurchase authorization (4) PowerMerge commercial scaling, with backlog of >2GW as of August (5) Zimmermann close to add ~$300mm+ in run-rate revenues	(1) Logistics costs impact to gross margins (100-125bp in F2Q27 vs F1Q27) (2) Lower IEEPA tariff refunds in F2Q27 vs F1Q27 ($10-$15mm in F1Q27) (3) Customer activity given 232 impact to PPA pricing (4) F2Q revenue impact from trucker shortage during the quarter (5) Execution risk integrating three acquisitions (Prevalon, Apex/Zigor, pending Zimmermann) simultaneously
	HASI	(1) Conversion of the >$6.5B pipeline with 1H26 originations tracking toward the $2-3B FY26 target (2) Minimal planned ATM issuance through 2026 (3) Underwritten yields at >11% vs portfolio yield at 9.2% (4) CCH1 scaling and CCH2 launch providing additional off B/S deployment (5) Total $2.2B of liquidity, with no senior notes due until 2030	(1) Equity needs if deployments exceed the $2-3B target (2) Cost of capital/interest-rate sensitivity (minimal impact) (3) RNG asset moved to Category 2 due to construction issues (4) Residential solar credit performance within the BTM portfolio (5) Gain-on-sale variability quarter to quarter
	RUN	(1) Further de-risking of the balance sheet, with leverage trending below 2x and potential buyback discussion into FY27 (2) ABS cost of capital at attractive spreads (3) Outlook for Direct business growth vs >10% expected in 2H26 (4) Potential clarity on FEOC would allow greater tax equity availability (5) Progress on SPAN new-homes and GPU initiatives	(1) Cash generation outlook impact from higher rates (25bps is ~$30mm) (2) Impact to volumes from higher pricing action in certain markets (3) Safe harbor transactions cash timing lag (4) Tax equity transfer pricing of high $0.80s to low $0.90s (5) Front-loaded costs due to higher Direct mix. Sluggish lead generation.
	FLNC	(1) Conversion of the ~$550mm hyperscaler award into backlog (2) Total DC pipeline growth vs 16GWh reported in F3Q26 (3) Total orders in F4Q are expected to be another record level (i.e. >$1.4B) (4) Houston facility is expected to ramp to full-scale production by 1QFY27 (5) Capital needs have declined due to the lowered outlook	(1) Production ramp needed for $1.2B of the $2.9B of backlog for FY27 (2) Revenue growth needed to improve margins (3) Domestic product order intake is limited until production resolves (4) Consolidated leverage ratio covenant test date of 1/1/2027 (5) FY guidance of >$2.9B in revenues will require outside capital. Guidance of $2.9B will imply >100% backlog coverage vs management commentary of using 80-90% backlog coverage for outlook.
	NRGV	(1) Revenue from the $500mm-$600mm 1.25GW deal starting in 4Q26 (2) Backlog expected to be ~$3B by YE driven by build-and-transfer projects (3) 275MW of reciprocating engines start being delivered in 1H27 (4) Opex leverage should transpire in FY27 from higher revenues (5) Mesa del Sol powered land customer discussions is the largest catalyst on the horizon	(1) Majority of FY26 revenues are expected in 4Q26 (2) Timing risks to COD of build-own-operate projects (3) High cost capital for assets (S2G is 10% cash plus 7% PIK) (4) Margin mix impact from higher BAT revenues (5) Significant capital needs. Potential dilution risks from ATM capacity
	ARRY	(1) Domestic book-to-bill ratio vs >1.4x in 2Q26 (2) APA revenue growth vs double-digit plan this year (3) Backlog conversion over next 6 quarters vs ~80% previously (4) Upside to guidance from AWM closing on 8/31 (not in guide) (5) Atlas foundations $0.03-0.04/W upside to ASP	(1) Risks to FY26 revenue guidance ($1.45B mid-point) from site readiness (2) GM decline in 2H from higher international mix (3) Logistics and metal cost increase impact to GM in 2H (4) FCF generation in 4Q due to revenue timing. Sluggish backlog growth (5) Preferred dividend impact (~$35mm in FY27)

Figure 5. Neutral Picks (Ranking, Opportunities, and Risks)

Neutral	BE	(1) Product backlog growth Y/Y vs total revenue growth Y/Y (2) Fuel cell air permits for Project Jupiter (3) Outlook for manufacturing capacity ramp toward 2GW by YE26 and further growth next year (4) GM benefit from higher product revenue mix (5) Color on extent of the $25B in funding available that has been used	(1) Project Jupiter delivery schedule vs backlog for 2027 (2) Higher Opex in 2H due to additional headcount (3) Sustainability of Services margins (4) Potential supply chain constraints on ability to meet demand (5) Scandium and critical-mineral supply availability
	GNRC	(1) Upside to $8B on existing initial ~$2.4B of the AMZN deal (2) Large MW manufacturing capacity vs planned ~$3.75B (3) Outlook for C&I EBITDA margins vs 17% target by 2028 (4) Easier comps for Residential revenues in 2H26 (5) Any commentary on potential conversations with hyperscalers	(1) Risks to Residential revenue guidance due to muted hurricane season and outages that were >30% below LT baseline average during 2Q26 (2) FEOC risks to primary engine supplier for DCs (3) Elevated capex (~4.5% of sales) weighing on FCF (4) Margins on DC orders from hyperscalers (5) Industry capacity growth vs GNRC's lead time advantage
	SHLS	(1) Upside to FY2027 consensus revenues. (2) Air Link manufacturing starts in 1Q27 (~$2B initial TAM) and is margin accretive vs total business (3) Higher cash generation in 2H, which will help pay down the revolver (~$197mm on B/S) (4) Lower legal fees of ~$20mm Y/Y in 2027 (5) Improved GM (couple of mm$ per Qtr) from factory consolidation (50% completed in April)	(1) Longer-term GM outlook, which may be provided with a range at 3Q EPS (2) Competitive risk from Voltage's alternate design trunk bus product and Bundling threat from NXT in eBOS (3) BESS bookings remaining lumpy ($65mm BLAO) with limited near-term revenue visibility (4) GM in 4Q26 may be impacted by product mix and fewer days in quarter (5) Potential for a DC adjacent acquisition
	ENPH	(1) Dutch net metering ends YE26; NL battery activations were +102% Q/Q (2) Propel targeting for 500 originations/week by YE; has 75% storage attach (3) SST full product system likely by November; pilots in 2027 (4) Fifth generation storage shipments begin in 4Q26 (5) PTC sale of $150mm completes in Jan-27; $108mm direct pay refund is pending	(1) Safe harbor revenues will create challenging comps in FY27 (2) SST competitive field intensifying (3) Continued softness (US resi sell through declined 34% Y/Y in 2Q) (4) Opex remaining above prior targets from higher R&D (5) Stiff competition in resi storage (TSLA)
	FCEL	(1) Initial MW delivery volumes under Phase 0 of the Fit Energy agreement (2) Updated committed Product Backlog vs $109mm as of 3Q (3) Commentary on extent of any conversion of the ~10GW sales pipeline into backlog (4) Potential additional Fit Energy orders conversion (5) Update on the 75MW Texas capacity reservation agreement	(1) Sharp increase in production is guided (100MW in October), far above historical realized levels (2) Generation segment gross margins have been heavily negative (-63% in 3Q) (3) Groton project (7.4MW) remained offline during 3Q (4) Competitive challenge from BE and other fuel cell providers (5) CFO change (termination without cause)
	CSIQ	(1) ASP uplift of ~15% on certain contracts for delivery before 232 start (2) Cell ramp (Phase 1 is 2.1GW in Oct; Phase 2 adds 4.2GW in 2027) (3) Recurrent closing deferred project sales in 3Q (4) BESS (e-STORAGE) momentum vs $3.5B backlog (5) Potential repricing to >$4.5B US module backlog	(1) Reliance on FEOC-compliant cell sourcing near-term pending full domestic cell ramp (2) Total $7.1B in debt driven by non-recourse project level leverage (3) Commodity exposure (lithium carbonate, silver) (4) Negative PV margins outside the US (5) FSLR patent lawsuits
	OKLO	(1) ~$3B of liquidity as of 2Q26 facilitates long-lead item procurement (2) Initial isotopes revenue is expected in FY27 (3) Pior M&A to contribute MSDs revenues in 2H (4) Color on fuel fabrication output following expected receipt of equipment in 4Q26 (5) Color on potential off-take and revenue from the isotopes business	(1) OCF burn and capex guidance were increased in 2Q26 (2) Plutonium fuel award timing is unclear, as is Oklo's share of the ~20MT (3) New $1B ATM was implemented in September; Oklo may use proceeds to accelerate spending (4) HALEU may require prepayments, which are unquantified (5) Idaho site is due to go online in 2028, which is a "challenging" timeline

Renewables & Alternative Energy: YTD Recap

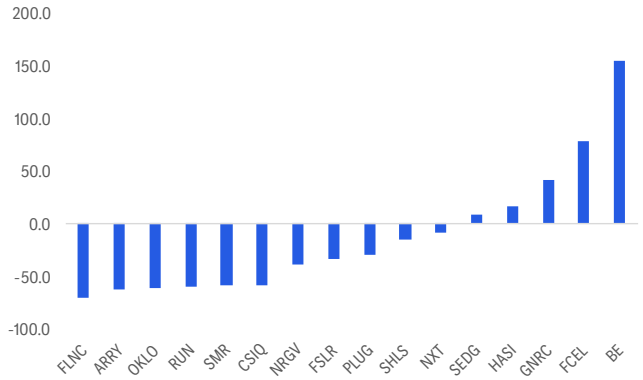

Renewables have remained out of favor this year, with the five largest renewable-energy ETFs collectively experiencing roughly an 11% decline in AUM over the past 90 days.

Sector performance has been driven primarily by higher interest rates and, to a lesser extent, rising labor costs, policy uncertainty, and Section 232-related concerns around polysilicon imports.

Within the group, companies facing potential external financing needs and/or execution challenges have significantly underperformed, including relative to residential solar names that are more directly exposed to interest-rate headwinds. Investors continue to focus on companies with external capital needs to use them as a source of funds.

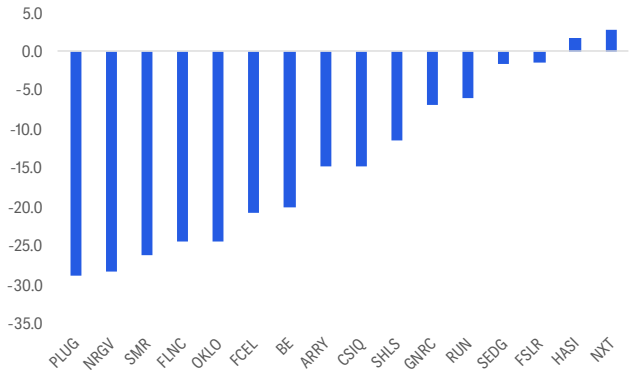

In contrast, companies with exposure to AI-driven data center demand, including BE, GNRC, and FCEL, have generated positive returns. HASI is somewhat insulated from benchmark interest rates and does not require external capital, which led to stable and predictable performance in a volatile market.

The following charts show the cumulative net fund flows across key renewable energy ETFs since August 2023. We calculate the total inflows/outflows as change in number of shares outstanding at an ETF divided by the starting NAV.

Source: Citi Research, Bloomberg

Credit markets have become increasingly selective across hyperscalers and neo clouds. CDS spreads have widened broadly YTD, but especially for CoreWeave. The key implication for the AI-power trade is that demand remains exceptionally strong, but the cost of supplying that demand appears to be rising.

Figure 11. CDS Spreads of Major Technology and Hyperscaler Companies (in bps)

On the election front, the probability market is indicating a Democratic majority in both the House and the Senate.

Figure 12. Which Party Will Win the U.S. House?

Source: Citi Research, Kalshi

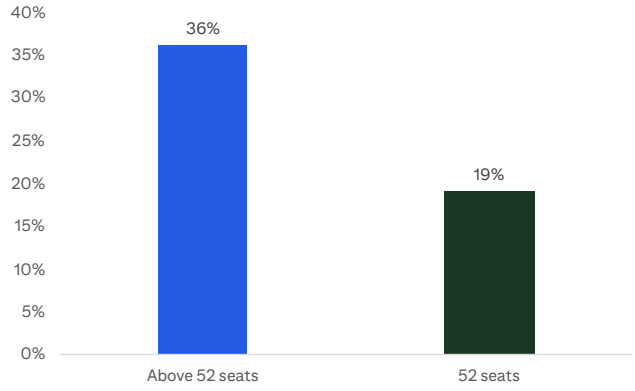

Figure 13. Which Party Will Win the U.S. Senate?

© 2026 Citigroup Inc. No redistribution without Citigroup's written permission.
Source: Citi Research, Kalshi

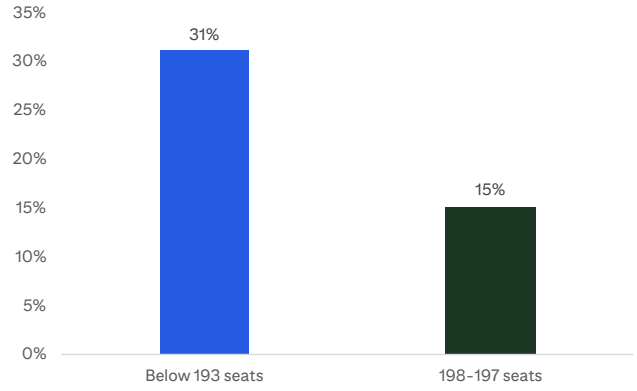

The seat-distribution charts similarly point toward a higher likelihood of Democratic gains than losses. For renewables, the key implication is not necessarily an immediate policy change, but an increase in the probability of future legislative support. Investors would likely assign a higher probability to extensions or modifications of incentives such as 45X instead of re-introduction of the ITC.

Citi's Takes

In the following section, we recap the most relevant recent research from around Citi impacting our coverage group.

Multi-Industry Outlook

Citi's multi-industry team notes that Multis appear positioned for durable growth, with sector organic revenue expected to accelerate to 8.4% in 3Q26 from 6.9% in 2Q26, supported by data-center infrastructure investment, improving short-cycle industrial demand, pricing, and added production capacity. Data-center projects already underway have not been materially disrupted by local opposition, and the sharp growth in construction starts should provide a long tail of demand for electrical, cooling, automation, and related infrastructure providers. The principal near-term risk is price-cost timing.

Data Center Takeaways

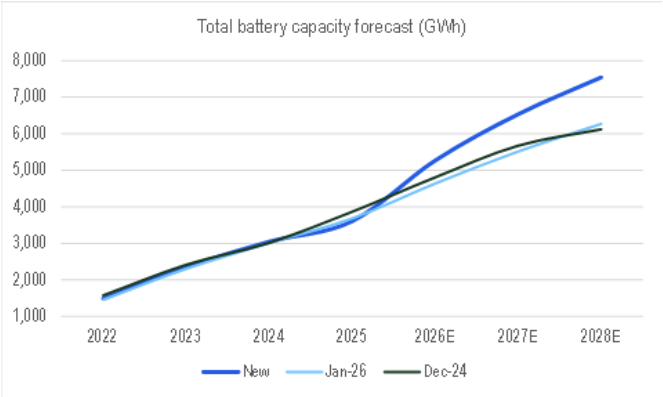

We listened to a data center expert call with Robert Babcock of Verdant Micro grid on 10/8 (note). In Mr. Babcock's view, nearly all data centers built in 2027 will have BTM power. He does not necessarily view BTM as a temporary bridge power either, and thinks they could remain the prime power source for a site.

Separately, Citi's multi-industry team attended Yotta 2026 (note). Data center infrastructure spending remains robust, with no evidence that community opposition, tighter financing conditions, or infrastructure constraints are meaningfully slowing projects already underway. State and local opposition could affect new projects three to five years out, but industry participants generally view proactive community engagement, local investment, and demonstrating grid and economic benefits as ways to preserve deployment plans. 800VDC adoption appears more likely in late 2028 or 2029.

Battery Storage Outlook

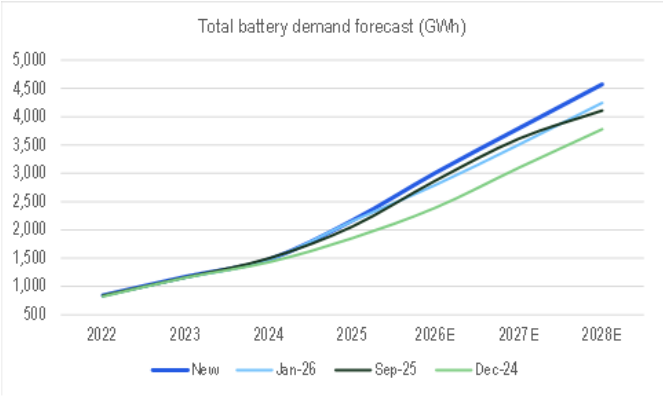

Citi's Metals & Mining team published an updated BESS forecast (note). The key takeaway is that battery supply tightness should ease in 2027 as capacity catches up with demand, creating moderate downward pressure on cell and ESS pricing, but not a repeat of the margin-destructive 2022–24 price war. Global battery demand growth is expected to slow from 39% in 2026 to 26% in 2027 and 20% in 2028, while capacity grows 24% in 2027. ESS demand should remain structurally strong despite slower growth, with global demand expected to increase by roughly 300 GWh annually through 2028 and China ESS demand still growing around 15% in 2027 rather than peaking in 2026.

Utility/Grid Catalysts

Citi's Utilities team notes that in Texas, the next catalyst is on October 19 when TCEQ is scheduled to update the Governor on air permit pause, and on December 10, when ERCOT is set to file the Batch Zero Eligibility Verification report and the data center audit report, which may also provide clarity on air permit pause timing.

Logistics Costs

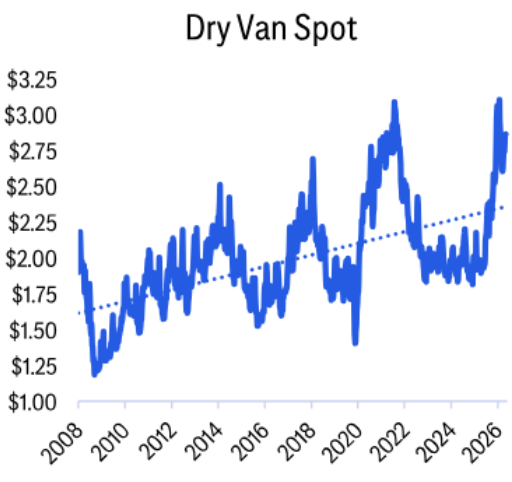

Citi's Transports team notes that Truckload spot rates rose into the July 4 peak as industry capacity tightened, before retreating through late August and beginning to recover again in September. Contractual rates are also beginning to increase, but the improvement should be gradual because pricing resets with a lag; higher driver wages, fuel costs, and difficulty seating tractors are tightening capacity while also limiting near-term carrier margin upside. From here, spot rates should strengthen into the fourth quarter as capacity continues to tighten. The following charts show the latest dry van spot rates (see note).

Figure 19. Dry Van Spot Rate (Stacked)

Interest Rates Outlook

Citi's Rates team notes that it is too early to buy the dip in US Treasuries because uncertainty around the Fed's reaction function, resilient growth, and the possibility of a December hike leave no clear catalyst for yields to fall. The base-case year-end 2026 forecasts are 4.80% for the 2-year, 4.85% for the 5-year, 5.00% for the 10-year, and 5.30% for the 30-year, as shown below.

Figure 21. Citi US Rates Strategy YE 2026 Forecasts

YE 2026 forecasts

Renewables PPA Pricing Should Move Higher

Recent Pricing Decline

LevelTen reported that North American solar PPA prices declined 4.8% sequentially in the second quarter of 2026 to approximately $61.40/MWh. The near-term softness appears to reflect weaker buyer demand and developers sharpening bids.

The recent decline in solar PPA prices may prove temporary. The projects currently being marketed still include a meaningful number that secured tax-credit eligibility before the July 4, 2026 deadline or purchased equipment before the latest trade restrictions. As that inventory clears, the next group of projects will have to absorb a structurally higher cost base.

Price & Cost Pressures

The main pressure should come from four areas: 1) the expiration of federal tax credits for new projects, 2) higher module prices following Section 232, 3) higher financing costs and 4) continued increases in labor and other development expenses.

Projects that did not secure tax-credit eligibility will increasingly populate the late-2029 and post-2030 delivery pipeline. They will need higher electricity prices, lower project costs or lower developer returns to compensate for the missing credit.

Clearway Energy has said that a +50bps increase in the interest rate would require a ~$2/MWh increase in the PPA or toll price needed to maintain the same PV or BESS project returns.

Below we calculate the change in a utility-scale project IRR based off a simplified model for every $2¢/W change in module pricing, holding all other variables equal. As shown, there appears to be a ~2ppt spread between a $30¢/W module and a $50¢/W module.

Figure 22. Estimated Impact to Project IRRs from Higher PV Module Costs

Source: Citi Research, Wood Mackenzie

Risk Shifting

Some developers are responding to trade and policy uncertainty by asking for broader "change in law" provisions. These clauses allow the PPA price to be reopened if tariffs, tax rules or other government actions materially increase project costs.

The practical implication is that the initial headline PPA price is becoming less definitive. A developer may offer a price today but retain the right to adjust it later if the project loses tax-credit eligibility or equipment costs rise.

This is particularly relevant for projects scheduled two to three years in the future. Developers cannot absorb unlimited policy risk while also maintaining minimum returns.

As uncertainty increases, the market will likely respond through some combination of higher initial PPA prices, wider tariff and tax-credit adjustment clauses, shorter periods during which quoted prices remain valid, larger deposits or earlier procurement commitments, and/or more conservative construction and financing assumptions.

Solar App & Alternative Data

Solar & Home Energy App Downloads

We update our solar app download analysis through early October 2026.

United States

The following figures show the rolling 90-day total downloads for each app in the US and the associated Y/Y growth rates.

Enphase saw a -10% Q/Q decrease in U.S. downloads in 3Q (vs a -12% decline Q/Q in downloads in 3Q25) and company expectations for a typical +5% to +10% increase Q/Q in 3Q.

GNRC PWRview downloads indicate a sharp decline as the company's Puerto Rico grant comes to an end. On the other hand, +26% Q/Q growth in download of Mobile Link for generators indicates a healthy increase and lowers the likelihood of a guidance cut in 3Q.

Europe

In Europe, Enphase saw a -29% Q/Q decrease in downloads in 3Q (vs a -28% decline Q/Q in 3Q25) and company expectations for a typical seasonality of -5% to -10% decrease Q/Q in 3Q. SEDG saw a -13% Q/Q decrease in downloads in 3Q, which is better than the -30% decline Q/Q decline it saw in 3Q25.

From a market share standpoint, SEDG appears to have stabilized its market share, which stood at 13.5% in September, up from 11.7% at the start of the year. ENPH's market share appears to be declining, now at 6.2%, down from 14.1% at the start of the year. For ENPH, our 2027 total revenue estimate is 16% below consensus.

Power Outage Activity

We present US power outages data through 10/12/26. Through October 2026, total customer outages reached 36.99mm, already surpassing full-year 2025 (36.61mm). Summer 2026 saw elevated disruption peaking in August 2026.

Gross Margin Drivers

The latest commodity pricing through early October is shown below.

Module Pricing

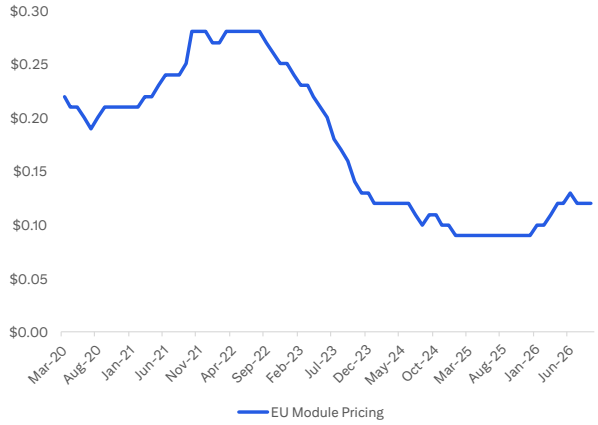

Commodity costs remain well below prior-cycle peaks, reflecting persistent manufacturing overcapacity across the solar supply chain. Polysilicon pricing has stabilized near $5–6/kg, while module pricing has recently rebounded modestly to roughly $0.12/W after bottoming near $0.09/W, likely due to supply rationalization and stronger near-term demand.

Array Technologies, Inc. (ARRY.O)

Buy / High Risk | TP **US$12.00** | Price US$3.26 (19 Oct 26 16:00)
We have not made changes to our estimates in this note.

Bloom Energy Corp (BE.N)

Neutral / High Risk | TP **US$281.00** | Price US$226.22 (19 Oct 26 16:00)
We have not made changes to our estimates in this note.

Canadian Solar (CSIQ.O)

Neutral / High Risk | TP **US$15.00** | Price US$9.57 (19 Oct 26 16:00)
We have not made changes to our estimates in this note.

Energy Vault Holdings Inc (NRGV.N)

Buy / High Risk | TP **US$4.75** from US$6.00 | Price US$2.77 (19 Oct 26 16:00)
We have tweaked the timing of certain build and own assets in our model. We have increased our forecasted Opex in FY27. We have also modeled a slightly more conservative GM for build and transfer projects. Lastly, we have updated our model for the latest share price which, given the equity capital contribution to new builds, has resulted in a larger modeled share count, contributing to our PT decrease.

Enphase Energy (ENPH.O)

Neutral / High Risk | TP **US$37.00** | Price US$30.63 (19 Oct 26 16:00)
We have not made changes to our estimates in this note.

First Solar (FSLR.O)

Buy / High Risk | TP **US$297.00** | Price US$171.80 (19 Oct 26 16:00)
We have not made changes to our estimates in this note.

Fluence Energy Inc (FLNC.O)

Buy / High Risk | TP **US$11.00** from US$20.00 | Price US$5.86 (19 Oct 26 16:00)
We have updated our model following the company's reduction to guidance driven by supply chain constraints. We now forecast ~$2.9B in FY27 revenues and ~$3.7B in FY28 revenues. Our target price goes to $11 from $20 accordingly.

Fuelcell Energy Inc (FCEL.O)

Neutral / High Risk | TP **US$19.00** | Price US$12.89 (19 Oct 26 16:00)
We have not made changes to our estimates in this note.

Generac Holdings (GNRC.N)

Neutral / High Risk | TP **US$232.00** | Price US$193.31 (19 Oct 26 16:00)
We have not made changes to our estimates in this note.

HA Sustainable Infrastructure Capital Inc (HASI.A)

Buy / High Risk | TP **US$50.00** | Price US$35.68 (19 Oct 26 16:00)

We have not made changes to our estimates in this note.

Nextpower Inc (NXT.N)

Buy | TP **US$111.00** from US$121.00 | Price US$79.97 (19 Oct 26 16:00)

We have lowered our FY27 and FY28 revenue estimates by 1% and 2% respectively, to $4.29B and $5.35B. We have also lowered our gross margin estimate in FY28 by 13bps to 30%.

Nuscale Power Corp (SMR.N)

Sell / High Risk | TP **US$4.00** from US$6.50 | Price US$5.69 (19 Oct 26 16:00)

We have increased our forecasted G&A by ~19% this year to ~$161mm. The primary driver of our PT decline is higher equity cost of capital driven by higher adjusted beta. Our price target declines from $6.50 to $4.00.

Oklo Inc. (OKLO.N)

Neutral / High Risk | TP **US$33.00** from US$57.50 | Price US$27.24 (19 Oct 26 16:00)

We have increased our capex and CFO use estimates to the high-end of the guided ranges. We have updated our adjusted beta estimate which reflects the stock's higher recent volatility, which is the primary driver of our PT reduction.

Plug Power (PLUG.O)

Sell / High Risk | TP **US$0.75** | Price US$1.37 (19 Oct 26 16:00)

We have updated our model for the 3Q26 revenue guidance and latest cash balance. There is no change to our PT.

Shoals Technologies Group Inc (SHLS.O)

Neutral / High Risk | TP **US$10.50** | Price US$7.31 (19 Oct 26 16:00)

We have increased our FY27 revenue forecast by 4% to $711mm and lowered our Gross Margin forecast for FY26 by 10bps to 31%. There is no change to our PT.

SolarEdge (SEDG.O)

Sell / High Risk | TP **US$30.00** | Price US$31.06 (19 Oct 26 16:00)

We have not made changes to our estimates in this note.

Sunrun Inc (RUN.O)

Buy / High Risk | TP **US$14.00** | Price US$6.89 (19 Oct 26 16:00)

We have not made changes to our estimates in this note.

Adding Upside 90-Day Short-Term View on Bloom Energy Corp (BE.N)

Direction: **Upside**
Duration: Within 90 Days
Category: Earnings

We see favorable risk/reward for BE's shares at current levels. We continue to view the company as a swing provider of power for onsite generation, especially for data centers. The fundamental demand for its core products appears to remain robust, based on commentary from its suppliers and industry participants. Inclusion of fuel cells in utility RFPs and a recent large order serve to further validate the technology. A potential approval of air permits for Project Jupiter in November would be a meaningful positive catalyst given the project size.

Adding Upside 90-Day Short-Term View on Generac Holdings (GNRC.N)

Direction: **Upside**
Duration: Within 90 Days
Category: Earnings

We see favorable risk/reward for GNRC's shares at current levels. Our C&I revenue estimate is above consensus, driven by higher data center revenues. The company has the potential to expand on its $2.4B deal with AMZN and can target additional hyperscaler customers. Growth in the DC business should support operating leverage, which could result in C&I EBITDA margins meeting the 17% analyst day target faster than plan. Lastly, Residential revenues should be supported by an uptick in outage activity over the summer and face easier comps in 2H, which should help offset the impact of the lack of hurricanes this year.

Adding Upside 90-Day Catalyst Watch on Nextpower Inc (NXT.N)

Direction: **Upside**
Duration: Within 90 Days
Catalyst: Earnings

We are opening a positive catalyst watch on NXT. The company will hold a capital markets day in November where it will provide an updated outlook on its revenue and earnings outlook, especially for its new product categories, which have been running ahead of plan. In particular, we are watching inverter bookings given planned >10GW of US capacity by mid-2027 and regulatory tailwinds. The company has likely leaned into its repurchase authorization of ~$500mm which should help support the shares at current levels. Lastly, the fundamental outlook for utility scale solar remains strong.

Adding Downside 90-Day Short-Term View on Nuscale Power Corp (SMR.N)

Direction:	**Downside**
Duration:	Within 90 Days
Category:	Earnings and Macro fundamentals

We see continued downside for SMR shares. The company has recently implemented a new $750mm ATM program following completion of its prior $1B ATM program. With minimal near-term revenues, higher Opex, and with final NTP for RoPower likely not until mid-2028, the company will continue to require capital to fund its operations. Lastly, we do not expect meaningful progress on potential PPA discussions with ENTRA1, especially as the utility in question is advancing competitor SMR technology.

Bull/Bear: Fluence Energy Inc (FLNC.O)

US$ 25.00 ▲327% Upside | US$ 11.00 ▲88% Upside | US$ 5.00 ▼15% Downside

Spread 341pp
Current Price and expected returns (upside/downside) as of 19 Oct 2026

BULL Assumptions

- Higher-than-expected industry growth
- Greater market share capture
- Gross margins improve to higher end of 10-15% range

BASE Assumptions

- Fluence achieves targets laid out in its guidance
- Margins do not deteriorate further and expand through volume growth and company initiatives
- Gross Margins in the middle of 10-15% range

BEAR Assumptions

- Continued decline in ASP leads to margin deterioration
- More competition from larger and well funded players
- Lower-than-expected industry growth

Bull/Bear: Nextpower Inc (NXT.N)

US$160.00 ▲100% Upside | US$111.00 ▲39% Upside | US$70.00 ▼12% Downside

Spread 113pp
Current Price and expected returns (upside/downside) as of 19 Oct 2026

BULL Assumptions

- NXT ramps non-tracker businesses faster than expected. International expansions yield strong results. Utility scale demand in the US is strong.

BASE Assumptions

- Utility scale demand meets expectations. Majority of 45X credits are competed away. NXT gains market share in eBOS and storage.

BEAR Assumptions

- Utility scale solar demand disappoints. New business M&A weighs heavily on margins. 45X incentives are completely passed onto customers and suppliers.

Bull/Bear: Nuscale Power Corp (SMR.N)

US$ 8.00 ▲41% Upside | US$ 4.00 ▼30% Downside | US$ 2.00 ▼65% Downside

Spread 105pp
Current Price and expected returns (upside/downside) as of 19 Oct 2026

BULL Assumptions

- Signing of additional customer contracts
- Potential advancement of the RoPower Project
- Government contracts, partnerships, or deal announcements

BASE Assumptions

- NuScale deploys ~16GW of reactors globally by 2040

BEAR Assumptions

- Lack of finalized customer contracts
- Faster rollout and innovation from other SMR players in the space
- Further delays in RoPower Project and higher costs

Energy Vault Holdings Inc

Investment strategy

We rate NRGV as Buy/High Risk. We believe the stock offers compelling exposure toward higher-margin, recurring infrastructure earnings. The company is building an Asset Vault platform that enables a capital-light path toward IPP-style economics, supported by ~$300mm of preferred equity from Orion Infrastructure Capital and a growing portfolio of contracted, long-duration storage assets. As more projects transition from construction to operations over the next 2–3 years, we expect a steady mix shift toward recurring EBITDA, improving margins and revenue visibility. Additionally, Energy Vault is leveraging its energy storage, integration, and software capabilities to expand into adjacent verticals, including AI-linked infrastructure and powered land developments, which offer higher revenue per MW and incremental EBITDA potential. The EPC business remains an important near-term driver of revenue and cash generation, supporting Asset Vault buildout while providing operational scale.

Valuation

We value NRGV by applying a 15x multiple to our forecasted 2030 EBITDA. We then subtract the estimated value of OIC's preferred interest claim at that time and estimated total debt, including project level debt since the financials are consolidated. We then discount back the equity at a ~12% cost of capital, resulting in our $4.75/sh price target.

Risks

We rate NRGV High Risk given its early-stage transition toward an IPP model, reliance on project execution, and exposure to capital markets and evolving end-market dynamics. While the shift toward Asset Vault provides a path to higher-margin, recurring earnings, the timing and scale of this transition remain dependent on successful project delivery and financing availability. Key downside risks to our target price include: 1) slower-than-expected conversion of backlog into operational assets, driving lower realization of high-margin EBITDA; 2) potential lack of incremental project wins, such as in higher-value segments such as AI infrastructure and powered land; and 3) deterioration in financing conditions.

Fluence Energy Inc

Investment strategy

We rate the shares of FLNC Buy/High Risk. Our investment thesis is that: 1) there is a large growing addressable market for battery product sales and related service; 2) there is a large growing market for software to optimize power assets; and 3) Fluence has a strong balance sheet. We expect FLNC to continue to get their fair share of this large and growing market.

Valuation

Consistent with our valuation methodology for other companies in the cleantech space, we use an average of three valuation techniques to derive

our PT of $11 for FLNC.

In our DCF methodology, we forecast the company's cash flow and financials through 2030. We then calculate the terminal value using 3% terminal growth and our estimate of annual investment above the company's depreciation to achieve the terminal growth. We then discount the cash flows on our estimated cost of capital of ~9%.

In our P/E valuation, we assume P/E multiple of 22x on our estimated 2029 and 2030 earnings and discount the derived valuation to calculate the NTM value.

In our EV/EBITDA approach, we assume a 12x multiple. Similar to our P/E approach, we calculate PT in the year 2029 and 2030 and discount it back on the company's cost of capital to calculate the implied valuation.

Risks

We rate the company High Risk because: 1) the global battery market is very competitive and technology is changing rapidly; 2) FLNC's sponsors had only a 180-day lock-up period on their shares and could exit and no longer support the Fluence business; 3) the ability of the product business to improve its margins is subject to volumes ramping and new favorable manufacturing and supplier contracts to be negotiated and signed; and 4) there are policy risks that may support gas & coal power plant over batteries, and hydrogen may evolve as a cost-effective storage option compared to electric storage. Lastly, FLNC's stock is exposed to interest rates and cost of capital, and broader ESG fund flow. If interest rates increase and ESG flows decline, FLNC's stock could fall.

Key risks to our thesis and to the shares achieving our price target are the following:

Execution Risk: There are execution risks on the company's ability to achieve scale, negotiate new manufacturing contracts outside of Asia, and develop new software. If the company is unable to achieve scale and negotiate favorable terms with suppliers post 2023, there will likely be financial consequences.

Competition for Software: As more players come to the storage market, competition for software and third-party applications will be intensified. If third-party app fees increase as a result of competitive advantage, the company's margins could suffer and financial performance would be challenged.

Battery Parts Availability: If certain battery components are not readily available and supply becomes tight, there could be challenges to meeting deadlines and deliveries for customers. If there are delays in deadlines being met, customers may request discounts and even cancel orders entirely. If this comes to fruition, there could be degradation in company performance and the stock price could decline.

Shipping/Supply Chain: The current state of global supply chain constraints could impede the company's growth outlook. Fluence relies heavily on shipping and only recognizes revenues upon delivery of its products. If current supply chain issues continue for the foreseeable future, the company's

financial performance would likely suffer.

Management Resources: The management plan is to hire more engineers and a larger salesforce to execute on its plan. If the company is unable to acquire the needed people, there could be challenges in achieving key milestones for the business that could negatively affect the stock.

Equity Overhang Post 180-day Lock-up: Post going public, key shareholders were subject to a 180-day holding period. If these holders decide to exit, the valuation of the stock could be adversely impacted.

Positive or adverse developments in these risk factors could cause the share price to remain above or fall below our target price.

Nextpower Inc

Investment strategy

We rate NXT Buy (1). NXT is global leader in the rapidly growing solar tracker market, with a strong balance sheet, experienced management team, expansive patent portfolio, and global supply chain. NXT has established a leading global position in the tracker market and is now focused on expanding into adjacent segments, including power conversion, foundations, PV module frames, and robotics. We expect the company to maintain market share in new markets and segments while maintaining attractive margins that allow consistent share buybacks.

Valuation

Our price target of $111/sh is based on an average of three valuation methodologies. In our P/E-based valuation, we apply an 22x multiple to projected earnings for CY27 and CY28 and discount it back. In our EV/EBITDA-based valuation, we apply a 15.0x multiple to our forecast CY28 EBITDA. Finally, we perform a DCF valuation based on our forecast through 2030. We derive a WACC of ~7% using CAPM derived cost of equity and 5% assumed cost of debt. We assume a terminal growth rate of 2%.

Risks

This stock is High Risk based upon our quantitative model but assigning a High-Risk rating is not supported by other qualitative factors such as consistently strong execution, IG rated debt, strong FCF generation, market leading position globally and clean BS. So, a High-Risk rating has not been applied.

Upside risks to our target price include stronger-than-expected utility-scale solar installations, continued elevated market share of NXT, and better-than-expected margins due to lower freight and steel costs.

Conversely, downside risk to our target price comes from lower-than-expected solar installations, market share loss, and lower margins from higher freight and/or steel costs.

Nuscale Power Corp

Investment strategy

We rate SMR as Sell/High Risk. NuScale is uniquely positioned as the only nuclear company for an approved SMR design from the NRC, giving it a significant regulatory and timing advantage compared to its competitors. Its factory-built, modular design allows customers to scale up based on energy needs while encompassing passive safety designs. The company has first mover advantage in an industry buoyed by rising power demand from datacenter/AI. However, significant execution risks remain while the stock appears to be pricing a large amount of installs by 2040 relative to expected global nuclear capacity additions. In the near term, though, we believe there could be potential positive catalysts.

Valuation

We value SMR using an average of three valuation methodologies, including EV/EBITDA, P/E, and DCF, to derive our price target of $4.0/sh. In our EV/EBITDA approach, we assume a 14x multiple on our 2039/40 adjusted EBITDA estimates and discount it back to derive NTM valuation. For our P/E approach, we assume a 20x multiple on 2039/40 EPS estimates and discount it back. In our DCF methodology, we assume a 2% terminal growth rate and an ~11% WACC.

Risks

We rate SMR High Risk as the company lacks binding customer agreements. Its path to n highly depends on securing long-term projects and successfully executing its SMR deployments via module sales.

Upside risks to our target price include: 1) successful execution of SMR deployment within 2030 timeframe; 2) announcements of customer agreements; and 3) additional government legislative and financial support for nuclear.

Downside risks to our target price include: 1) failure to secure firm customer orders; 2) any significant cost overruns relative to initial estimates; 3) increased competition; and 4) lower industry power demand than anticipated.

Oklo Inc.

Investment strategy

We rate Oklo as Neutral/High Risk. Oklo is a new age nuclear energy company that is investing to establish a power, fuel, and isotopes energy platform. The company is purusuing a novel NRC application process for its powered reactors. Fast construction times, owner/operator model, attractive unit economics, small design targeting datacenter market, strong LOI order book and recurring cash flows differentiate Oklo from the competition. The company has sourced fuel for its first facility and has sufficient liquidity to go through the application process and deploy the plant in late 2027/early 2028.

However, regulatory, technological, execution, and fuel related challenges remain. We await progress on regulatory process to be more constructive.

Valuation

Our target price of $33/sh is an average of our DCF, EV/EBITDA, and P/E valuation methodologies. Our DCF assumes an 1% terminal growth rate and an ~10% WACC. In our P/E approach, we apply a 25x multiple to our estimated 2034/2035 earnings per share. In our EV/EBITDA approach, we assume a 18x multiple on our 2034/2035 adjusted EBITDA estimates.

Risks

Our High Risk rating stems from the company's limited operating history as a public company and expected lack of revenue until first powerhouse deployment.

Downside risks to our TP include: 1) Fuel: no commercial domestic supply of HALEU fuel currently; 2) Execution: nuclear facilities are prone to delays and cost overruns; 3) Technology: though the tech is de-risked through operation at EBR, widescale deployment is prone to risks; 4) Financing: we estimate Oklo may need substantial soutside capital LT if it deploys plants at the targeted pace.

Upside risk to our TP include: 1) faster-than-expected licensing approval; 2) any announcement of binding customer contracts; and 3) a faster pace of powerhouse deployment than expected.

Plug Power

Investment strategy

We rate PLUG Sell/High Risk given limited liquidity, relatively high-cost structure, dilution from capital raises and tough competition should continue to weigh on the stock. The dilution from equity raises will likely continue as the company needs more cash given profitability remains elusive. Raising prices in an oversupplied market may either negatively impact sales more than anticipated and/or the increases may not materialize in the face of competition. The status of the loan from DOE LPO is unclear and will not be helpful in directly supporting ongoing operations.

Valuation

Our target price of $0.75 is based on the average of three valuation methodologies of EV/EBITDA, DCF, and P/E. Our DCF uses an 8.5% WACC and 5% terminal growth rate. For multiples-based valuation approaches, we apply multiples of 12x to our 2030 EBITDA estimate. We apply 18x multiples to our 2030 EPS estimate. Our assumed target multiples consider broader market multiples and applies discount/premium based on strengths and weaknesses of the company.

Risks

We assign a High Risk rating as the stock is deemed to be relatively volatile by our quantitative risk-rating model. Risks include:

Financing and Liquidity – PLUG is not currently profitable and requires significant capital for operations and capex. PLUG faces existential risk if it is not able to secure more liquidity and given its large funding gap as it is currently unprofitable. Upside could come from larger than expected DOE financing.

Regulatory – Delay in instituting hydrogen focused regulation in the EU, US, and China would be a headwind, while additional regions/countries adopting hydrogen roadmaps would be a positive.

Economic – Delays in customer orders could worsen the outlook for PLUG. Conversely, upside could come from accelerated orders.

Concentrated Customers – Three customers accounted for ~51% of sales in 2022. However, PLUG is adding new customers and broadening its product offerings, which could reduce the reliance on pedestal material handling customers, and represent upside to our PT.

Competition – Batteries, generator sets, fast-charged technologies, and other types of fuel cell technologies compete with PLUG's offerings.

Execution/Strategic – PLUG has several large JVs that will require coordination to execute on effectively.

Raw Materials – Failure to source key raw materials, including platinum, and components for products or higher costs due to imposed tariffs would be a headwind.

If the impact on the company from any of these factors proves to be greater or less than we anticipate, the stock will either outperform or underperform our target price.

Shoals Technologies Group Inc

Investment strategy

We rate SHLS Neutral/High Risk. SHLS is a market leader in EBOS supply with dominant share and strong margins. However, the company continues to face more competition with newer players. Furthermore, expected growth rates in the utility-scale solar sector have slowed meaningfully, with projects seeing multiple year push-outs. The company is working to diversify its revenue streams and is targeting additional TAMs adjacent to its core EBOS offering.

Valuation

We value SHLS using an average of three valuation methodologies at TP of $10.50. Our DCF incorporates a WACC of ~8.3% and terminal growth rate of 3%, while we apply multiples of 14x and 20x to our 2026 and 2027 EBITDA and P/E estimates, respectively. Our EBITDA and PE multiples are broadly in line with multiples for infrastructure companies. While growth at SHLS is uncertain in the near to medium term, it is balanced by industry-leading

margins without any government credits. Our target price is a blended average of each of the three methodologies.

Risks

We rate SHLS High Risk due to its share price volatility.

Upside risks to our estimates and target price could come from: (1) solar installation and/or EV adoption growth in the US could exceed estimates, which would have positive implications for SHLS's results; (2) expansion into international markets, which we have not yet provided credit for in our models.

Downside risks to our estimates and target price could come from: (1) renewed supply chain constraints and/or a reimposition of tariffs on solar imports to the US; (2) easing of labor constraints decreases the value proposition of SHLS's BLA solution over traditional combiner-based solutions; (3) downside to solar project growth resulting from import-driven equipment delays; (4) inability of SHLS to enforce its patents and protect its IP leading to increased competition, resulting in market share loss.

(For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Analysts' compensation is determined by Citi Research management and Citigroup's senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the "Firm"). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For financial instruments recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in such financial instruments (and any underlying instruments) and may act as principal in connection with transactions in such instruments. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

Unless stated otherwise neither the Research Analyst nor any member of their team has viewed the material operations of the Companies for which an investment view has been provided within the past 12 months.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 6th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			Catalyst Watch		
Data current as of 01 Oct 2026	**Buy**	**Hold**	**Sell**	**Buy**	**Hold**	**Sell**
Citi Research Global Fundamental Coverage (Neutral=Hold)	61%	32%	7%	36%	48%	16%
% of companies in each rating category that are investment banking clients	39%	43%	30%	42%	38%	36%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The target price is based on a 12 month time horizon. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Citi Research may suspend its rating and target price and assign “Rating Suspended” status for regulatory and/or internal policy reasons. Citi Research may also suspend its rating and target price and assign "Under Review" status for other exceptional circumstances (e.g. lack of information critical to the analyst's thesis, trading suspension) affecting the company and/or trading in the company's securities. In both such situations, the rating and target price will show as “—“ and “-“ respectively in the rating history price chart. Prior to 11 April 2022 Citi Research assigned “Under Review” status to both situations and prior to 11 Nov 2020 only in exceptional circumstances. As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Catalyst Watch/Short Term Views (“STV”) Ratings Disclosure:
Catalyst Watch and STV Upside/Downside calls: Citi Research may also include a Catalyst Watch or STV Upside or Downside call to indicate the analyst expects the share price to rise (fall) in absolute terms over a specified period of 30 or 90 days in reaction to one or more specific near-term catalysts or events impacting the company or the market. A Catalyst Watch will be published when Analyst confidence is high that an impact to share price will occur; it will be a STV when confidence level is moderate. A Catalyst Watch or STV Upside/Downside call will automatically expire at the end of the specified 30/90 day period. The Catalyst Watch will also be automatically removed if share price performance (calculated at market close) exceeds 15% against the direction of the call (unless over-ridden by the analyst). The analyst may also remove a Catalyst Watch or STV call prior to the end of the specified period in a published research note. A Catalyst Watch/STV Upside or Downside call may be different from and does not affect a stock’s fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch/STV Upside call corresponds to a buy recommendation and a Catalyst Watch/STV Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside, Catalyst Watch Downside, STV Upside, or STV Downside call is considered Catalyst Watch/STV No View. For purposes of FINRA ratings distribution-disclosure rules, we correspond Catalyst Watch/STV No View to Hold in our ratings distribution table for our Catalyst Watch/STV Upside/Downside rating system. However, we reiterate that we do not consider No View to be a recommendation. For all Catalyst Watch/STV Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

Privately held companies:
The legal entities through which Citi conducts its business do not permit investment research recommendations, ratings, target prices, or estimates on any privately held companies (“private companies”) referenced herein. Citi Research does not utilize a rating system for private companies. Any information on private companies in this report is based on generally available information and, although obtained from sources believed by Citi to be reliable, its accuracy and completeness are not guaranteed. Private companies are generally not subject to reporting obligations, which may result in less publicly available information. The information contained in this report may differ from information a private company may subsequently make

public or otherwise share with investors. Continuation of publishing private company reports or private company sections within reports is at Citi's discretion, in accordance with internal policies.

RESEARCH ANALYST AFFILIATIONS / NON-US RESEARCH ANALYST DISCLOSURES

The legal entities employing the authors of this report are listed below (and their regulators are listed further herein). Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization (but are employed by an affiliate of the member organization) and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Citigroup Global Markets Inc.	Vikram Bagri; Theodore Giletti, CFA

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

Regulations in various jurisdictions require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

Citi Research has implemented policies for identifying, considering and managing potential conflicts of interest arising as a result of publication or distribution of investment research. A description of these policies can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows; Q2 2026 Buy 33%(63%), Hold 44% (51%), Sell 23% (49%), RV 0.5% (87%): Q1 2026 Buy 33% (63%), Hold 44% (52%), Sell 23% (46%), RV 0.5% (89%); Q4 2025 Buy 33% (63%), Hold 44% (50%), Sell 23% (46%), RV 0.4% (91%); Q3 2025 Buy 33%(61%), Hold 44% (52%), Sell 23% (50%), RV 0.4% (80%). For the purposes of disclosing recommendations other than for equity (whose definitions can be found in the corresponding disclosure sections), "Buy" means a positive directional trade idea; "Sell" means a negative directional trade idea; and "Relative Value" means any trade idea which does not have a clear direction to the investment strategy.

European regulations require a 5 year price history when past performance of a security is referenced. CitiVelocity's Charting Tool (https://www.citivelocity.com/cv2/#go/CHARTING_3_Equities) provides the facility to create customisable price charts including a five year option. This tool can be found in the Data & Analytics section under any of the asset class menus in CitiVelocity (https://www.citivelocity.com/). For further information contact CitiVelocity support (https://www.citivelocity.com/cv2/go/CLIENT_SUPPORT). The source for all referenced prices, unless otherwise stated, is DataCentral, which sources price information from LSEG Data & Analytics. Past performance is not a guarantee or reliable indicator of future results. Forecasts are not a guarantee or reliable indicator of future performance.

Investors should always consider the investment objectives, risks, and charges and expenses of an ETF carefully before investing. The applicable prospectus and key investor information document (as applicable) for an ETF should contain this and other information about such ETF. It is important to read carefully any such prospectus before investing. Clients may obtain prospectuses and key investor information documents for ETFs from the applicable distributor or authorized participant, the exchange upon which an ETF is listed and/or from the applicable website of the applicable ETF issuer. The value of the investments and any accruing income may fall or rise. Any past performance, prediction or forecast is not indicative of future or likely performance. Any information on ETFs contained herein is provided strictly for illustrative purposes and should not be deemed an offer to sell or a solicitation of an offer to purchase units of any ETF either explicitly or implicitly. The opinions expressed are those of the authors and do not necessarily reflect the views of ETF issuers, any of their agents or their affiliates.

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Please be advised that pursuant to Executive Order 13959 as amended (the "Order"), U.S. persons are prohibited from investing in securities of any company determined by the United States Government to be the subject of the Order. This research is not intended to be used or relied upon in any way that could result in a violation of the Order. Investors are encouraged to rely upon their own legal counsel for advice on compliance with the Order and other economic sanctions programs administered and enforced by the Office of Foreign Assets Control of the U.S. Treasury Department.

This communication is directed at persons who are "Eligible Clients" as such term is defined in the Israeli Regulation of Investment Advice, Investment Marketing and Investment Portfolio Management law, 1995 (the "Advisory Law"). Within Israel, this communication is not intended for retail clients and Citi will not make such products or transactions available to retail clients or to non-Eligible Clients. The presenter is not licensed as investment advisor or investment marketer by the Israeli Securities Authority ("ISA") and this communication does not constitute investment or marketing advice. The information contained herein may relate to matters that are not regulated by the ISA. Any securities which are the subject of this

communication may not be offered or sold to any Israeli person except pursuant to a security offering exemption according to the Israeli Securities Law, 1968and the public offering rules provided thereunder.

Citi Research broadly and simultaneously disseminates its research content to the Firm's institutional and retail clients via the Firm's proprietary electronic distribution platforms (e.g., Citi Velocity and various Global Wealth platforms). As a convenience, certain, but not all, research content may be distributed through third party aggregators. Clients may receive published research reports by email, on a discretionary basis, and only after such research content has been broadly disseminated. Certain research is made available only to institutional investors to satisfy regulatory requirements. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Resolução 20 and ASIC Regulatory Guide 264, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. Statements and views concerning ESG (environmental, social, governance) factors are typically based upon public statements made by the affected company or other public news, which the author may not have independently verified. ESG factors are one consideration that investors may choose to examine when making investment decisions. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Where a component of a published trade idea is subject to a restriction, the trade idea will be removed from any list of open trade ideas included in the Product. Upon the lifting of the restriction, the trade idea will either be re-instated in the open trade ideas list if the analyst continues to support it or it will be officially closed. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

The Product is not to be construed as providing investment services in any jurisdiction where the provision of such services would not be permitted.
Subject to the nature and contents of the Product, the investments described therein are subject to fluctuations in price and/or value and investors may get back less than originally invested. Certain high-volatility investments can be subject to sudden and large falls in value that could equal or exceed the amount invested.The yield and average life of CMOs (collateralized mortgage obligations) referenced in this Product will fluctuate depending on the actual rate at which mortgage holders prepay the mortgages underlying the CMO and changes in current interest rates. Any government agency backing of the CMO applies only to the face value of the CMO and not to any premium paid. Certain investments contained in the Product may have tax implications for private customers whereby levels and basis of taxation may be subject to change. If in doubt, investors should seek advice from a tax adviser. The Product does not purport to identify the nature of the specific market or other risks associated with a particular transaction. Advice in the Product is general and should not be construed as personal advice given it has been prepared without taking account of the objectives, financial situation or needs of any particular investor. Accordingly, investors should, before acting on the advice, consider the appropriateness of the advice, having regard to their objectives, financial situation and needs. Prior to acquiring any financial product, it is the client's responsibility to obtain the relevant offer document for the product and consider it before making a decision as to whether to purchase the product.

Card Insights. Where this report references Card Insights data, Card Insights consists of selected data from a subset of Citi's proprietary credit card transactions. Such data has undergone rigorous security protocols to keep all customer information confidential and secure; the data is highly aggregated and anonymized so that all unique customer identifiable information is removed from the data prior to receipt by the report's author or distribution to external parties. This data should be considered in the context of other economic indicators and publicly available information. Further, the selected data represents only a subset of Citi's proprietary credit card transactions due to the selection methodology or other limitations and should not be considered as indicative or predictive of the past or future financial performance of Citi or its credit card business.

Citi Research product may source data from dataCentral. dataCentral is a Citi Research proprietary database, which includes the Firm's estimates, data from company reports and feeds from LSEG Data & Analytics. The source for all referenced prices, unless otherwise stated, is DataCentral. Past performance is not a guarantee or reliable indicator of future results. Forecasts are not a guarantee or reliable indicator of future performance. The printed and printable version of the research report may not include all the information <(e.g. certain financial summary information and comparable company data) that is linked to the online version available on the Firm's proprietary electronic distribution platforms.
