## WHAT'S CHANGED

|--------------------------------|-----------|-----------|
| Kingsoft Cloud Holdings (KC.O) | From      | To        |
| Price Target                   | US\$15.00 | US\$16.00 |

Positive outlook on both revenue growth and margin was reconfirmed. We have updated model and raise our price target to US\$16. Reiterate OW.

## 2026 guidance reiterated:

- Full-year revenue growth in the 30-40% range is unchanged, with a high chance of hitting the midpoint, which implies revenue acceleration in 2H.
- Full-year GPM of ~15%; quarterly GPM should be stable or rising. Depreciation benefit will start in 2H27 (fully depreciated GPU but can still generate revenue). AI cloud and MaaS are both contributing to the improvement.
- Very confident in reaching full-year positive adjusted OPM. Adjusted OPM should be largely stable or rising from the 4% in 2Q26. Absolute opex amount and ratio are both well under control.
- Full-year adjusted EBITDA margin should be ~35%.
- Total investment of Rmb15bn on track. 3Q started with good progress.

## AI computing:

- Undersupply to be sustained for at least one more year based on current dynamics. Price hike is well digested by customers.
- At the current very high computing power prices, KC mainly allocates resources to hyperscalers that can sign life cycle contract and provide sizable prepayment. This sacrifices short-term margin for long-term certainty and cash flow.
- KC is starting its hosting cloud business, which is asset-light and high-margin.
- AI cloud also brings opportunities for traditional cloud, like storage.

See the following section – [Overview \(cont'd\)](#) – for discussion of MaaS, enterprise cloud, and what's changed.

# Overview (cont'd)

## MaaS:

- Onboarded 120 models and 230 customers to its platform. Customers mainly use domestic model tokens in web coding use case. It carries the highest GPM among the different businesses.
- KC's advantage over model providers: much better service level agreement (SLA) to customers, which is a must if enterprise customers use AI in their mission-critical processes. KC's advantage over hyperscalers: neutral on AI models and close connection with all model providers.
- KC's model inference optimization capability is close to original model providers.
- KC is considering starting MaaS business overseas.

## Enterprise cloud:

- Full year – low to mid-single-digit growth. Customers are delaying decision in view of fast-rising hardware prices.
- It is cultivating its FDE engineers internally. The FDE model is very suitable to address the AI deployment demand in large SOEs and government in China. It can also change some project-based models to more recurring models.

## What's changed

Following 2Q26 earnings, we fine-tune our revenue forecasts: -0.9% for 2026, +0.7% for 2027, and +3.1% for 2028E, incorporating the latest results, which mainly lowered our outlook for enterprise cloud services.

We raise our EBITDA forecasts 2.5% for 2026, 4.9% for 2027, and 10.1% for 2028, reflecting a better GPM outlook and disciplined opex control – we reduce our total opex assumptions 9.2%-10.7%.

As a result, our normalized loss per share estimate for 2026 narrows 26%. We have raised our normalized EPS estimates 764% for 2027 and 84% for 2028, reflecting a very low base.

## Risk Reward – Kingsoft Cloud Holdings (KC.O)

Benefiting from computing power shortage

### PRICE TARGET US\$16.00

Base case, derived from 5.5x 2027e EV/EBITDA multiple. This multiple is at a discount to the US neocloud peer average of 13x and median of 10x to reflect lower asset yields and greater uncertainty around supply chain availability. We prefer EBITDA for comparability across companies given differences in depreciation policies and limited EBIT.

### OVERWEIGHT THESIS

- We forecast AI revenue to grow 109% in 2026, driven by strong computing power demand and total server investments of Rmb15bn.
- We expect gross margin to expand on the strength of its more profitable AI business.
- Our price target is based on 5.5x 2027e EV/EBITDA, at a discount to US neocloud peers to reflect greater uncertainty around supply chain availability.
- Nonetheless, this implies multiple expansion.
