Weekly theme: Hynix buyback implication, upbeat spot price, tech tour preview

Industry Overview

Positive implications of Hynix's massive share buyback

SK Hynix has announced a massive share buyback (W40tn by Nov-2026; [see our report](#)) and a high payout ratio (50%+ of FCF vs old 50% even). We present three positive implications for the memory chip industry: (1) extra cash spend for shareholders instead of irrationally increasing capex spend; (2) share buyback more critical to secure stronger ownership structure or future ADR issuance (mainly Hynix); and (3) 5-10x higher 2026 cash dividend vs long-term historical average even after massive share buyback (lots of cash still available to pay record-high year-end cash dividends). Memory chipmakers can easily offer high-single digit% shareholder returns (Hynix's case: 50% of 2026 FCF can be W85tn vs current market cap of ~W1,200tn). We also see similar shareholder-return ratio for Samsung Electronics, which also uses 50% of FCF for shareholder returns (dividend, buyback). Overall memory chipmakers no longer use fully operating cash flow for capex hike alone, due to more active buyback/cash dividends, led by Korean players.

DRAM/NAND spot prices broadly stronger than expected

DRAM spot price strengths have continued for more than two months despite low season or already established 1H high level. Most DRAM chips (16Gb DDR5, 8Gb DDR4, etc.) rose again low-single digit% this week. This also suggests 30%+/- QoQ increase. True, August contract price (for commodity DDR5) still shows low- to mid-20% hike QoQ (not yet +30%) but potentially rising Sept price could lead to a 30%+ QoQ rise in 3Q ASP, in our view. Of course, LTA-based 3Q price reveals very broad range of change (0-30%) but the majority seems close to 20% or higher, according to our analysis. NAND spot price also rose QTD but not as much as DRAM given only 20% range (but higher than our current forecasts of sub-20%). Our survey shows near-term memory chip order increase among module makers and OEMs, which are expected to launch to smartphone and PC products in Sept/4Q, with 10%+ higher retail prices YoY. Net-net, we don't see any downside risk to our global 3Q-blended ASP assumptions (DRAM: +23% QoQ; NAND: +15%). China's semis important data for July also present upbeat memory ASP (up 100%+ YoY): entire semis imports up 71% YoY (USD basis) but only +9% units; memory only imports up 200% YoY, far exceeded logic; this also implies very strong memory ASP.

Preview on virtual memory/Korea tech tour (24-28 Aug)

We will host a virtual tech tour via Zoom next week (24-28 Aug), with 13 corporates (C-level management and IR team) covering the following sectors: memory semis (DRAM, HBM, NAND), equipment (deposition, laser annealing), substrate (FC-BGA, PCB), OSAT (advanced packaging), AI/cloud services (CSP, MSP), etc. Key discussions will be memory super-cycle, ASP (3Q, 4Q, 2027), LTA (price vs volume), shareholder returns (payout ratio increase, buyback vs dividend), new fabs (construction vs mass production start), capex, new node migration (1c node DRAM, 300+ layers NAND), advanced packaging (TCB, hybrid bonding), etc. For registration, please contact your sales representative or corporate access team.

Memory spot/contract price trend

Exhibit 11: DRAM spot prices rebounded through June/July/Aug after softening through April–May, following a strong rally from September 2025 to January 2026. Prices have reached multi-decade highs, with 16Gb DDR5 (for PC) at ~\$53 and DDR4 at ~\$90, driven by supply reallocation toward HBM and server DRAM—well above the prior ~\$10 peak in October 2017.

Price objective basis & risk

SK Hynix (HXSCF)

Our PO of W3,000,000 is derived from 8x 2027-28E EPS. Our 8x target P/E is based on the midpoint between the previous peak cycle (4-5x in 2017-18 during the cloud boom) and the long-term historical average (low teens). This is slightly below our fair multiples for global DRAM peers (9-11x) given elevated share-price volatility in 1H26 and July. Investors may be concerned about a potential downturn (2027 or 2028), given the strong 2025-26 earnings results. This is the rationale for using the 2027-28 valuation period and excluding 2026. We believe the company's proven earnings strength in 2026 and estimated record-high earnings in 2027-28, along with its global leadership position and high-margin profile, will lead to a re-rating to above 8x fair P/E. Upside risk is stronger-than-expected AI chip demand from US Big Tech, while downside risk also relates primarily to weaker chip demand.

Equity Investment Rating Distribution: Global Group (as of 30 Jun 2026)

Coverage Universe	Count	Percent	Inv. Banking Relationships ^{R1}	Count	Percent
Buy	1987	56.11%	Buy	1190	59.89%
Hold	797	22.51%	Hold	496	62.23%
Sell	757	21.38%	Sell	391	51.65%

^{R1} Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. VOLATILITY RISK RATINGS, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. INVESTMENT RATINGS reflect the analyst's assessment of both a stock's absolute total return potential as well as its attractiveness for investment relative to other stocks within its Coverage Cluster (defined below). Our investment ratings are: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. An investment rating of 6 (No Rating) indicates that a stock is no longer trading on the basis of fundamentals. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster ^{R2}
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

^{R2} Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

INCOME RATINGS, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend. *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.

Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. Digital assets are extremely speculative, volatile and are largely unregulated. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein.
