Feedback On Our Assumption

Investor feedback was in agreement with our framework and relative preferences. Investors continue to favor Infrastructure and Cybersecurity, while remaining cautious on Applications. The sector debate still leans bearish, though sentiment appears less negative than a few months ago.

Key Takeaways

- Investors favor Infra and Cyber over Apps, but consensus is crowded, and sentiment leans bearish on software broadly, though less so than before.
- Post 4Q26 print, MSFT just needs solid beats and raises, not another blowout, to keep the incremental investor engaged given how depressed sentiment had been.
- Investors want proof AI drives revenue acceleration. Disclosing DAUs, API calls, or AI adoption rates could help build that case ahead of reported revenue.
- Cyber names are up over 30% in six weeks on AI tailwinds, but early (FTNT) vs later (TENB, VRNS) beneficiary dynamics could bring digestion around Q2 prints.
- App software's recent 20%+ outperformance looks more like a short squeeze; we favor SMID-cap apps (TWLO, NAVN) over Large-cap (NOW, SHOP, ADSK) near-term.

Please see our previously published assumption of coverage note: [Software: The Moat & The Journey – Assessing Software Durability + Growth in the Age of AI \(21 Jul 2026\)](#). Our high-conviction Overweights include: MSFT, PANW, CRWD, SHOP, NET, NOW, DDOG, & SNOW.

Overall, investor feedback following our assumption of US Software coverage suggests investors are broadly aligned with the Moat & Journey framework, but remain cautious on adding broad sector exposure. Where clients do want exposure, they continue to gravitate toward Infrastructure Software and Cybersecurity, but with some concerns around the higher valuations. Application sentiment remains bearish given AI disruption risk, switching-cost concerns and limited evidence of AI monetization flowing through to reported numbers. Microsoft was the most discussed name, with investors balancing confidence in platform consolidation against questions around Copilot adoption and timing of upside realization.

Key Discussion Topics:

1. Preference For Infrastructure + Cybersecurity Over Applications Is Very Consensus. We were a bit surprised by the lack of pushback from investors around our more cautious view on application software. Investors clearly still have a preference for infra and cyber over apps given infra and cyber are perceived to have stronger and clearer AI demand drivers. Investors remain quite bearish on apps even on some of the higher quality platforms like ServiceNow and Shopify despite the depressed valuation levels, suggesting sentiment is increasingly being driven by

Morgan Stanley does and seeks to do business with companies covered in Morgan Stanley Research. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of Morgan Stanley Research. Investors should consider Morgan Stanley Research as only a single factor in making their investment decision.

momentum and price action rather than fundamental value. There also remain a lot of questions around the potential impacts of AI to incumbent app vendors. ***These highly consensus views do make us a bit worried on a go forward basis given how extremely crowded both sides of this trade are.***

2. What Drives the Next Leg Higher for Microsoft? Following a 4Q26 print where Microsoft's \$450 billion one-day gain in market capitalization was the largest by any U.S. business ever (see our recap note [here](#)), investors have been asking what is needed to drive outperformance from here. Investors are wondering whether Microsoft needs to deliver more of these big beats on Azure and Copilot expectations for the stock to keep working. We disagree because sentiment has been so negative on the name, valuation had been so depressed, and now you have had a potentially big narrative changing quarter with the 4Q26 print. As such, we believe Microsoft now just need to put together solid beats and raises for the incremental investor to get involved from here.

3. What Gets Investors More Interested in Software? Many investors have clearly capitulated their software exposure over the past year and remain hesitant to add broad software exposure. The feedback we consistently heard is that investors want to see clearer evidence that AI products can and will drive revenue acceleration, durable pricing uplift, and margin support before rotating more meaningfully back into broader software. ***While reported revenue is the key metric investors are using to judge the impact of AI, companies can start to lay the groundwork around the early benefits they are seeing by disclosing metrics like DAUs, MAUs, # of API calls, or % of the customer base using AI as evidence that customers are actually using their AI / agents and getting value out of the solutions.***

4. Cyber as Beneficiaries, But Will We See That in Q2? In general, [with cyber names up 20% over the last month](#) and a half vs. S&P up 5%, there is recognition of the themes we talked about in our sector assumption, namely that cyber sees early, but phased investment from AI, as organizations address technical debt, invest in upskilling tools for SOC analysts and eventually turn to the larger opportunity of securing AI. We are seeing this play out in earnings thus far, with FTNT seeing 52% Y/Y product growth, but TENB / VRNS putting up more expected quarters (being later beneficiaries). As a result of this dichotomy of early vs. later beneficiaries, but nearly all names seeing share price appreciation, [there has been a view of investors that there could be more digestion on earnings](#). While the [Hugging Face incident](#) reignited concerns as to how safe environments can be against AI-native adversaries, and whether all cyber vendors can benefit, we think bias of investors still leans long, just [not into the Q2 print](#).

5. Is the Recent Application Software Outperformance Sustainable? Over the past month, application software has outperformed infrastructure and cybersecurity by >20%, prompting investors to wonder if this is a sign of potential leadership change within the sub-sectors. Our view is that the recent move is most likely driven by short squeezes as the highly crowded short positioning started to unwind. We do not think there has been a fundamental change that has driven this re-rating as there has not been a meaningful step change in revenue growth rates or AI adoption within application vendors just yet. As such, the rally is likely less durable. That being said, ***we believe investors should start to slowly increase exposure to apps***

by picking through the rubble as we are starting to see some AI greenshoots that likely drive meaningful re-ratings and more dispersion among the individual names, especially given how crowded short positioning is across the whole sub-sector. Within apps, we have a near-term preference for SMID-cap apps over Large-caps for a couple reasons: 1) Smaller revenue bases so it takes less AI revenue to meaningfully move overall growth rates and 2) Less tech debt to deal with. In SMID-cap, we prefer TWLO and NAVN. In Large-cap, we prefer NOW, SHOP, and ADSK.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of July 31, 2026)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.
