

AMERICAS BROKERS & CRYPTO

A cautiously optimistic outlook for 2H26: structural and cyclical traditional brokerage and prediction markets growth, and upside crypto optionality, if recent trends persist

Brokers and crypto stocks under coverage are up 3% on average since 7/21/26 (ahead of the group's first earnings), outperforming the S&P 500 by 1pp, as we enter tougher seasonality in the late summer in traditional retail trading, and the crypto backdrop has been muted until the past week. However, we remain cautiously optimistic on the Brokers & crypto stocks from here from both a structural and cyclical perspective. We see positive structural and cyclical growth trends across traditional brokerage and prediction markets. Further, despite persistently weaker crypto volumes, a very recent spike in crypto market cap, if it were to persist, could drive a positive inflection in trading. This could be catalyzed by crypto regulatory reform - while the crypto market structure bill passing under this US Congress appears increasingly unlikely, US regulatory agencies continue to push forward with regulatory changes that should drive ecosystem expansion at least to some degree. Moreover, digital assets firms have demonstrated willingness to rationalize cost to cushion the impact of a challenging operating backdrop. Finally, average valuation across the group appears attractive, at only ~30th %ile levels over the past 5 years on GSe adj. P/E and

EV/EBITDA. We highlight 5 key themes coming out of 2Q26 earnings:

- 1. We see tailwinds for retail trading inflection into the fall, both structurally and cyclically...** When adjusting for account/asset growth of the brokerages over the past few years, 2Q26 retail volumes remain below prior cycle peaks. Further, July and August remain two of the weakest seasonal months. While volumes in July/August of this year were down 30%/21%, underperforming typical historical seasonality, we attribute this in part to volumes being pulled forward into a record June, given strong ECM trends in the month. Further, seasonality inflects in September, and could benefit further from record IPO activity that GS Portfolio Strategy anticipates over the course of the rest of the year.
- 2. ...And similar or even more pronounced structural and cyclical growth potential in prediction markets.** Prediction markets have experienced explosive growth over the past 2 years (rising 1,160% from Jan'24-Jul'26

annualized¹), which we expect to continue, as the number of users continues to rise, albeit somewhat unevenly. While structural growth has masked seasonality, we believe that 2/3 largest prediction markets categories (sports and elections) are seasonal, with weakness in the summer months, given lack of sports activity, and given we remain some months from the US midterm elections. As such, August industry volumes are down ~15% MTD MoM. However, seasonality is positive in September and into the fall, once sports leagues restart, and ahead of the election. Further, the other of the 3 largest prediction markets categories, crypto, is highly cyclical, and could improve going forward.

3. **Crypto trading remains weak, but optionality of an inflection increases, driven by recent spike in market cap...**
Crypto volumes fell 30% in July and 21% in August MTD MoM, continuing a 10-month cyclical downswing. That being said, with crypto market cap up 21% over the past week, this could herald an improvement in activity. Given we have seen false starts in the past year, e.g., a spike in crypto market cap in May that did not lead to crypto volumes inflecting, we believe market cap needs to remain at this higher level for some time before it would conclusively driven an inflection in volumes.
4. **...and continuing crypto regulatory reform, despite lack of legislative clarity.** While the likelihood of the crypto market structure bill (the CLARITY Act) passing the Senate continues to decline, thanks, given the short window before the midterms, and Congressional leaves until then, US regulatory agencies continue to drive crypto regulation. While not as permanent, and thus less impactful for innovation and institutional adoption as legislation, the recently proposed SEC innovation exemption, as well as 10+ digital asset firms being approved for de novo OCC trust bank charters, likely contribute to ecosystem expansion, at least to some degree. However, we believe that meaningful incremental institutional digital asset adoption hinges on digital asset legislation.
5. **With a more challenged crypto backdrop, digital asset firms have increasingly rationalized cost, which has cushioned margin impact from lower top lines.** Across our coverage, firms have rationalized 2026 expenses by ~5% on average, which has added ~6pp to operating margins.

Across the group, we prefer:

- **Best-in-class through-the-cycle structural growth** at Buy-rated **FIGR**, **HOOD** and **IBKR** (on the Americas Conviction List), each of which has demonstrated robust structural platform expansion. FIGR has consistently scaled its core consumer loan marketplace volume 100%+ YoY over the past few months, which we expect to continue, given accelerating origination partner growth that should sustain volume growth for longer. In addition, HOOD and IBKR have each demonstrated robust platform expansion, with HOOD's product velocity and successful marketing putting it well on track to outperform its 20% annualized net deposit growth target in 2026E. IBKR turning up marketing and its global

¹ Source: Company data, Dune Analytics.

business model driving sustainable growth have led to it tracking to 30%+ YoY account growth for 2026E, well above its 20-25% target.

- In addition, Buy-rated **COIN** offers upside optionality from any persistent improvement in the crypto backdrop, and continues to see strong idiosyncratic growth in newer businesses (including derivatives and prediction markets). We also see COIN as a beneficiary of the recently proposed SEC digital asset innovation exemptions, given its tokenization services offerings. Finally, the company offers attractive valuation in an historical context.

Key themes

1. **When juxtaposing cyclical and seasonality within traditional retail brokerage, further growth appears likely, beginning in September.** When adjusting for structural account and asset growth, we see the potential for further cyclical growth in traditional brokerage, as recent negative seasonality in the late summer typically inflects positively in September. Our proxy for retail industry equities trading exhibited 14%/15% sequential declines in August/July, which has prompted question on whether the retail trading cycle has turned, following record June levels, and given 2Q26 volumes/margin balances are ~40%/100% above 2021 peaks ([Exhibit 2](#), [Exhibit 6](#), [Exhibit 8](#)). We continue to believe there is further runway for retail trading growth this cycle, albeit at a slower pace, given: 1) when adjusting for account growth since 2Q21, 2Q26 volumes remain 8% below prior cycle peaks, which could support further growth from here ([Exhibit 7](#)); 2) similarly, margin balances / client assets also remain below prior cycle peaks, and further growth in margin balances support trading volume growth as well, with a strong correlation between margin balances and volumes historically ([Exhibit 9](#), [Exhibit 10](#)); and 3) ECM issuance has historically supported retail trading volumes on a 1Q lagged basis, and GS Portfolio Strategy forecasts record 2026 equity issuance of ~\$675bn, following record 2Q26 issuance of \$252bn (report [here](#)) ([Exhibit 12](#), [Exhibit 13](#)). July/August retail volumes have weak seasonality historically, and have modestly underperformed historical seasonality this year ([Exhibit 11](#)). However, we believe the weaker July and August seasonality likely reflects some activity pulled forward into a record June. We expect at least a typical seasonal positive inflection in September, and even potential outperformance, given the weakness in July and August. Hence, we continue to project 28% YoY traditional retail brokerage commissions growth in 3Q26E.
2. **Positive seasonality in prediction markets likely more pronounced than is typical, beginning in the fall.** The preponderance of event contracts traded are in what we would define as seasonal or cyclical categories (namely elections, sports and crypto), and have lower volumes in late summer before a positive September inflection, which should continue into the balance of the fall, representing a near-term tailwind for prediction markets volumes. August industry prediction markets volumes has fallen ~15% MTD MoM, which, in our view, is primarily driven by the inherent seasonality underlying event contracts, given two of the three largest event categories: sports and politics (79%/2% of July volumes), are each seasonal, while crypto (15% of July volumes) is cyclical, could begin to inflect positively – see below ([Exhibit 18](#)). We believe a portion of prediction market's historical seasonality has been obscured by the fact that this is a nascent product, which has experienced rapid structural growth, with a ~1,160% annualized CAGR in total January 2024–July 2026 industry prediction markets volume, with the number of users growing each month MoM since August 2025 (ex. April 2026), and with robust YoY growth each month since August 2025 ([Exhibit 15](#)[Exhibit 16](#), [Exhibit 17](#)). Looking ahead, beyond continued structural growth in the asset class (which is <3 years old), we expect a positive seasonal inflection in prediction markets in September by examining products that are adjacent to or components of prediction markets: 1) US industry online sports gaming (OSG) gross gaming revenue, which are analogies for sports event

contracts. These exhibit strong positive seasonality in September through January ([Exhibit 19](#), [Exhibit 20](#), [Exhibit 21](#)); and 2) Political event contracts, which track election cycles. While we only have limited historical volumes during elections, activity has historically risen meaningfully ahead of elections ([Exhibit 22](#)). Finally, crypto is heavily cyclical, and could inflect positively, which would likely support crypto event contract volumes as well.

3. **The outlook for crypto trading remains uncertain, but with potential upside if rising market cap persists...** Crypto volumes have continued to soften in recent months, but we believe that they could inflect, if the very recent crypto market cap appreciation were to persist for longer. Crypto volumes/market caps have fallen ~65%/50% on avg. over the last 6 cycles, and are down ~75%/40% this cycle ([Exhibit 23](#), [Exhibit 24](#)). Industry crypto volumes fell 30% in July, and 21% in August TD, but we believe that there could be an inflection going forward ([Exhibit 25](#), [Exhibit 26](#)). Specifically, crypto market cap has risen 21% over the past week. This is, in itself, not sufficient for a positive inflection, as we believe we need to see more persistently higher market cap – note that we had a spike in market cap in April-May, in which crypto market cap rose 5%, but then reversed, and volumes did not persistently trend higher. Further, this crypto downturn has lasted longer than the average of historical downturns. This cycle's decline has lasted for 10 months, slightly longer than the 4-month median from peak-to-trough over the previous 5 crypto cycles ([Exhibit 27](#)).
4. **...And if we continue to see digital asset regulatory reform.** Despite the likelihood of the crypto market structure bill (the CLARITY Act) passing this Congress falling, regulatory reform – albeit less permanent than in the form of legislation – continues, driven by the recently proposed SEC Innovation Exemption, as well as OCC bank charter approvals among digital asset firms. These could catalyze ecosystem expansion. Nonetheless, we believe a meaningful structural unlock in institutional adoption and new use cases requires legislation. Progress on the CLARITY market structure bill in Congress has stalled, as a Senate vote did not occur before the August recess. With the upcoming midterm election and further Congressional recesses, the path for CLARITY to pass under this Congress continues to narrow. That being said, US agencies continue to make progress on digital asset regulatory reforms, which should support ecosystem expansion and innovation, at least to some degree:
 - a. **The SEC recently proposed a variety of innovation exemptions** (see our report [here](#)), which would provide temporary relief from registration and qualification requirements for certain digital assets issuers and securities. In our view, if passed as written, this could, at least to some degree, drive new use cases for digital assets outside of crypto trading, within tokenization and decentralized finance (DeFi), although we believe legislative clarity on these topics is a precondition for fully fledged innovation.
 - b. **10 additional firms have received OCC novel bank charters in 2026**, which provide money transfer licenses and authority to custody assets ([Exhibit 30](#)). In addition, we believe these incremental charter approvals provide a stamp of approval from US Federal banking regulators of the crypto ecosystem, and entrenches the crypto ecosystem within the US Federal banking system.

Nonetheless, we continue to believe that meaningful incremental adoption and a full unlock of innovation for digital assets would require digital assets legislation to pass Congress. Many institutions still view regulatory uncertainty as the primary barrier to entering the crypto market, with 35% of surveyed institutions citing it as the biggest hurdle to greater adoption, and 32% of institutions citing regulatory clarity as a top catalyst for institutional crypto adoption - both stats from a 2025 GS survey ([Exhibit 28](#), [Exhibit 29](#)).

- 5. How much expense leverage can crypto firms use to offset a challenging operating environment?** Several digital asset firms have taken actions to reduce expense bases, which, while not fully sufficient to offset a weak operating backdrop, added ~5.8pp to adj. operating margins. Crypto market cap has fallen 12% YTD, with lower volumes across crypto spot and crypto derivatives, falling 65%/60%, which has driven meaningful downward revenue estimate revisions across the Street ([Exhibit 24](#)). Against this backdrop, several crypto firms have taken substantial cost reduction actions, which, on our estimates, have resulted in an ~5% average reduction in total expenses ([Exhibit 31](#)). In turn, this has added ~5.8pp to operating margins, and has partially offset the earnings impact from lower revenue estimates ([Exhibit 32](#)).

How much expense leverage can crypto firms use to offset a challenged operating environment?

Exhibit 31: 5 brokers & crypto firms took actions to reduce expense base in 2026 amid the muted crypto backdrop, resulting in ~4% estimated annual expense reductions on average...

Source: Company data, Goldman Sachs Global Investment Research

Exhibit 32: ...which translated to ~580bps higher operating margins

Source: Company data, Goldman Sachs Global Investment Research

Debated stocks

Top picks among covered brokers and crypto names: Buy-rated **HOOD**, **FIGR**, **IBKR** and **COIN**.

- **Buy-rated HOOD** - Best in class structural growth, with cyclical tailwinds, as the business diversifies and moves up market into more active traders and new businesses, supported by its rapidly scaling Rothera prediction markets exchange, continued retail trading strength, elevated ECM activity, with upside optionality from other newer products. We see 16% ARPU growth from 2025-28E, as HOOD continues to drive 20% annualized net deposit growth. This is driven by HOOD continuing to move up market into active traders in its core brokerage business, as well as continuing to add new products for customers. We see structural growth in a number of newer businesses, including: 1) prediction markets (13% of 2026E revenue), with the recently launched HOOD JV prediction markets exchange, Rothera, rising to the third largest prediction markets exchange in under 2 months post launch to ~\$150mn of annualized revenue²; 2) digital banking (deposits and credit card); and 3) digital wealth. We also see longer-term upside optionality from nascent products, including: 1) agentic trading; and 2) Trump accounts. Further, we see cyclical improvement from here, as the company remains best positioned to capture any reacceleration in retail trading momentum: 1) after record equity/options/prediction markets volumes in June, and, notably, record July options trading volume, which significantly outperformed industry wide declines; and 2) in light of record forecasted 2026E ECM activities, which should support securities lending, equities trading, and retail IPO access fees. All in, we see a positive revenue growth inflection in the fall of 2026 and beyond. In our view, the company's 29%/21% 2025-28E client asset/top-line CAGRs appear attractive relative to peers, for which we forecast only 13% top-line p.a. growth. All-in, we are 2% above 2026E adjusted EPS.
- **Buy-rated FIGR** - Robust, structural growth in tokenized HELOC lending, supplemented by further asset class expansion, largely insulated from crypto volatility, platform growth across the core HELOC business, and attractive valuation driven by misguided focus on take rates and crypto sell off. FIGR's HELOC business continues to see accelerating momentum, with our constructive view on structural growth underpinned by robust originating partner growth, with the number of partners rising from 73/178 in 2024/25 to 80 in 1Q26, and 102 in 2Q26, with no signs that marginal partners are bringing less volume. Further, the company continues to migrate more of the business to its balance sheet-light marketplace (FIGR Connect) more quickly than expected, which we believe merits a higher multiple - FIGR Connect volumes reached 65% of total volumes, with a target of 70%. Near-term, 3Q26 TD volumes have remained strong, implying another month of >100% YoY growth, +17% QoQ to ~\$5.0bn. While the overall net consumer loan marketplace take rate has declined, this is a function of stronger volumes and mix shift, vs. pricing cuts. Specifically: 1) clients sending greater volumes to FIGR receive pricing discounts; 2) the company is mix shifting by adding fast-growing new product TAMs, certain of which have

² Note: We derive ~\$150mn annualized revenue run rate from reported 2Q26 Rothera revenue of \$17mn since late May launch, adjusted for daycount. Source: Company data, Dune Analytics

lower take rates, but comparable contribution margins; and 3) the company is pivoting quickly to capital-light FIGR Connect, which has relatively lower take rates, but the highest margins of the HELOC channels. Growth has been robust, with a 50% 2022-25 top-line CAGR, which we expect to remain strong at 38% from 2025-28E. Finally, while the stock trades at ~23.0x adj Q5-Q8 P/E, which compares to ~19.5x for peers, we view this premium as justified, given FIGR's 23pp 2025-28E top-line CAGR premium vs. peers on average.

- **Buy-rated IBKR (on the Americas Conviction List) - Steady, structural growth and exposure to positively inflecting traditional brokerage, with potential upside from TAM expansion into nascent verticals, including prime brokerage and prediction markets.** We expect IBKR to deliver robust organic account growth as the company continues to scale its global presence. ~85% of new accounts are ex-US, with broad diversification across countries, and the largest non-US account growth country at only ~5% of app downloads. IBKR has low single digit account market share in each of the key global regions in which it operates: the Americas, Europe, and Asia. The company also continues to invest in prime brokerage, prediction markets (it owns a predictions market DCM, ForecastEx), and RIA technology. Further, the company is a beneficiary of ECM strength, as one of the few players that offers global clients access to IPOs, and one of even fewer brokers that offers this service at low cost. We forecast a 27% 2025-28E average account CAGR (which compares to only 8% for peers), and a 15% top-line CAGR, with de minimis AI and crypto price risk, with confidence in our forecasts underpinned by the company continuing to invest heavily in its product set and efficiency, with an enhanced focus on marketing. IBKR also offers a unique 75%+ pre-tax margin profile driving robust capital generation.
- **Buy-rated COIN - We believe COIN offers upside optionality from growth in 3 key areas, best-in-class expense discipline, tailwinds from recently proposed SEC digital asset innovation exemption, as well as an attractive valuation entry point.** Three key growth areas: 1) Structural growth in crypto derivatives trading, in which COIN has taken ~8pp of market share since 1Q24. 2) Ongoing expansion of COIN's crypto infrastructure businesses, including stablecoins, custody, staking, and prime brokerage (termed subscription & services). We believe that these businesses, which comprised ~40% of 2025 revenue, should benefit from SEC's innovation exemption rule passing, and/or the market structure bill passing, both of which would catalyze institutional adoption and new digital asset use cases. COIN appears best positioned across the peers to service crypto innovation, given its institutional tokenization service offering. 3) Asymmetric upside potential from new products. In the past few months, COIN has begun to roll out new businesses, including prediction markets, equities trading, banking, and wealth. As these businesses currently generate limited revenue, growth represents top-line upside. We expect COIN to be able to effectively sell these products to its large installed base of ~7.5mn monthly active users. In addition, while crypto market has remained muted, COIN has demonstrated cost discipline, with its 2026E expense guidance implying a ~\$600mn reduction from its 4Q25 expense runrate, driving the firm to be consistently adj. EBITDA positive. Finally, valuation screens as attractive, with COIN trading at ~28.0x Q5-Q8 adj. P/E, only a ~5th %ile multiple over the past 5 years.

HOOD:

Exhibit 33: We model HOOD to grow ARPU at a ~16% CAGR from 2025-2028E, as it mix shifts to more profitable active traders, and it cross-sells more products

Source: Company data, Goldman Sachs Global Investment Research

Exhibit 36: ...as HOOD has notably diversified revenue into new businesses, including prediction markets, subscription revenue, and other (which include Trump accounts)...

Source: Company data, Goldman Sachs Global Investment Research

Exhibit 34: HOOD has sustainably generated 20%+ structural net new asset growth, which we view as the long-term structural growth of the business

Source: Company data, Goldman Sachs Global Investment Research

Exhibit 37: ...with tailwinds from its rapidly scaling Rothera prediction markets exchange, which has captured 3pp of market share within 2 months of launch

Source: Dune Analytics, Company data, Goldman Sachs Global Investment Research

Exhibit 35: We expect continued transaction revenue growth, after an inflection in 2Q26, mostly through traditional brokerage and other non-crypto products...

Source: The Block, Company data, Goldman Sachs Global Investment Research

Exhibit 55: COIN currently trades at GSe Q5-Q8 P/E of ~28.0x, only a ~5th %ile multiple since COIN's its IPO

Source: FactSet, Visible Alpha Consensus Data, Company data, Goldman Sachs Global Investment Research

Valuation and new vs. old

Since the beginning of the 2Q26 earnings season, brokers & crypto outperformed the market by ~1pp, with 3% higher stock prices on average largely driven by multiple rerating, representing investor concern surrounding slowing retail trading after a record 2Q26 and a continued, muted crypto backdrop ([Exhibit 57](#)). We believe valuations appear somewhat attractive, in light of potentially positively inflecting retail trading and prediction markets volume trends based on historical seasonality. Valuations are at ~24.0x/14.5x GSe Q5-Q8 P/E and EV/EBITDA, or ~30th %ile over the last 5 years, and we see rerating potential over time ([Exhibit 61](#), [Exhibit 63](#)).

Exhibit 56: Brokers & crypto have performed 1pp better than the broader market since the first 2Q26 EPS print (07/21/26)...

Note: We have considered market capital weighted price performance for each group

Source: FactSet, Goldman Sachs Global Investment Research

Exhibit 57: ...primarily by multiple rerating

Note: We consider change in cons. 2027 EPS estimates for COIN, CRCL, HOOD, ETOR, IBKR, and WLTH, and consider adj. EBITDA estimates for GLXY, BTGO, and revenue estimate for GEMI.

New vs. old:

We update estimates based on latest volume and market data. We mark to market assets on platform to crypto prices, and adjust our custody/asset/reserve revenue accordingly. All in, our median 2027E EPS decreases by 1%. We increase crypto firms BTGO, CRCL, COIN, and GLXY target multiples given a better outlook for crypto names, given upward trending crypto market caps. We increase FIGR's multiple to reflect some exposure to crypto as well, as well as additional analysis suggesting continued structural consumer marketplace volume growth. We reduce ETOR target multiple to reflect market share questions in the highly competitive US market into which they are investing heavily. Overall, our median target multiple remains unchanged. All in, we increase our price target by 4% and now forecast a median total return of 7%.

New vs old estimates, multiples and price targets

Exhibit 68: Key risks

Ticker	Rating	12m Price Target	Risks	
			Downside	Upside
HOOD	Buy	\$124.00	Lower retail engagement levels, lower interest rates impacts the NII growth trajectory, weaker cross-sell of new products to user base with lower margins, payment for order flow regulation.	NA
IBKR	Buy*	\$114.00	Account growth deceleration; fewer trades/account; lower revenue/trade; faster interest rate cuts than expected; market volatility and margin loans; margin compression required to sustain account growth.	NA
FIGR	Buy	\$43.00	Reliance on HELOC product; Lower interest rates driving lower HELOC demand; Credit/funding risk from economic deterioration; Reduced demand from private credit purchasers	NA
COIN	Buy	\$196.00	Crypto deregulatory reform is insufficient; product evolution outside of trading takes longer; crypto market cap trending down over time; pricing pressure impacting margins.	NA
ETOR	Neutral	\$32.00	Unsuccessful US expansion; retail trading cycle slows down; crypto market enters a downturn; substantially lower interest rates.	Expansion in the US happens more quickly and more cheaply; CopyTrader is more differentiated and harder to replicate than expected; US broker expansion takes longer; crypto trading accelerates once again.
GLXY	Neutral	\$25.00	Crypto market volatility; persistently lower crypto market cap; slowing of AI investment and data center oversupply; lower market interest rates.	Favorable crypto regulation; further increases in crypto market cap; faster than expected institutional uptake of digital assets activity; scaled up data center offerings.
WLTH	Neutral	\$9.50	Lower interest rates; insufficient product development leading to slower client acquisition; macroeconomic and market volatility; competitive intensity and pricing pressure; higher mortgage and credit expansion risk.	Stronger structural growth and demographic tailwinds; continued market share gains; sustained or higher interest rates leading to stronger cash management performance; rapid and successful mortgage origination expansion.
BTGO	Neutral	\$6.50	Crypto market volatility; persistently lower crypto market cap; cybersecurity risks; share gains fail to materialize; crypto regulatory reform not materializing; lower market interest rates; deal integration falls short of expectation.	Favorable crypto regulation, futher increase in crypto market, market shift toward pure-play custody providers, execution in expansion business, crypto volatility, higher interest rates.
CRCL	Neutral	\$81.00	Ecosystem growth slows; as a result of a weaker crypto market backdrop; Market share gains from USDT not continuing; Coinbase de-emphasizes USDC; and competition from other stable coins.	Favorable crypto regulation, accelerated USDC market share gains, higher-for-longer rates benefiting reserve income, further increases in crypto market cap, a higher-for-longer interest rate environment.
GEMI	Sell	\$3.50	NA	Favorable crypto regulation; Higher crypto market cap; Earlier than expected profitability; and better credit performance

Note: * on the US Conviction List - Directors' Cut

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Distribution of ratings/investment banking relationships

Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	50%	34%	16%	65%	59%	43%

As of July 1, 2026, Goldman Sachs Global Investment Research had investment ratings on 3,104 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage universe and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Regulatory disclosures**Disclosures required by United States laws and regulations**

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; registered market maker. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes

investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at <https://www.gs.com/worldwide/brazil/area/gir/index.html>. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 10th Floor, Ascent-Worli, Sudam Kalu Ahire Marg, Worli, Mumbai-400 025, India, Corporate Identity Number U71410MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. Registration granted by SEBI and certification from NISM in no way guarantee performance of the intermediary or provide any assurance of returns to investors. Goldman Sachs (India) Securities Private Limited compliance officer and investor grievance contact details, a copy of the annual compliance audit report and other relevant information and disclosures can be found at this link: <https://www.goldmansachs.com/worldwide/india/research-analyst>. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: <https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html>. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at <https://www.gs.com/disclosures/europeanpolicy.html> which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, and Investment Management Association of Japan. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at <https://www.gs.com/research/hedge.html>.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances.

Early-Stage Biotech (ES). An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.

Global product; distributing entities

Goldman Sachs Global Investment Research produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom.

Goldman Sachs International ("GSI"), authorised by the Prudential Regulation Authority ("PRA") and regulated by the Financial Conduct Authority ("FCA") and the PRA, has approved this research in connection with its distribution in the United Kingdom.

European Economic Area: Goldman Sachs Bank Europe SE ("GSBE") is a credit institution incorporated in Germany and, within the Single Supervisory Mechanism, subject to direct prudential supervision by the European Central Bank and in other respects supervised by German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research within the European Economic Area.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (<https://www.sipc.org>).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage universe as described herein.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, make a market or act as liquidity provider in, and buy or sell, any securities, derivatives, or other financial instruments referred to in this research (including any financial instruments issued by the companies referred to herein), unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or

price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at <https://www.theocc.com/about/publications/character-risks.jsp> and https://www.goldmansachs.com/disclosures/cftc_fcm_disclosures. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to <https://research.gs.com>.

Disclosure information is also available at <https://www.gs.com/research/hedge.html> or from Research Compliance, 200 West Street, New York, NY 10282.
