Bottom Line: The AI compute demand environment is robust. The key debate is shifting beyond GPU access as CoreWeave looks to monetize higher value layers of the AI stack through managed inference, software services, and Omni; while self-built infrastructure should enhance control, economics, and differentiation over time.

Key Takeaways

- **Demand environment is robust.** CoreWeave continues to see demand for AI compute materially exceeding available supply, with largest customers consuming large amounts of infrastructure. While much of the focus is on hyperscalers and frontier labs, management pointed to a new growth vector: enterprises increasingly treating AI infrastructure as a strategic asset and building dedicated AI clusters for training and inference workloads (e.g. Caterpillar). On the supply side, while acknowledging the magnitude of new supply being announced in the ecosystem, the company emphasized that building and operationalizing AI infrastructure at scale remains difficult and that many announced projects still need to be executed successfully. Against that backdrop, securing and controlling supply is increasingly important; their first self-built data centers are expected to begin coming online over the next year, with vertical integration less about margin capture and more about gaining greater control over deployment timelines, operations, and future product innovation. CoreWeave noted that owning more of the underlying infrastructure provides a better environment to iterate on new technologies and optimize performance across the stack.
- **Platform depth.** Management highlighted several ways it is monetizing its software layer on top of infrastructure. The most obvious example is managed

Goldman Sachs does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. inference, where customers are looking for a robust AI stack that includes infrastructure, networking, storage, observability, orchestration, and operational support, rather than raw compute alone. Over time, we believe these software and services layers should carry higher strategic value than GPU access itself, creating deeper customer relationships and more durable revenue streams.

- **Margin expansion.** Management outlined several initiatives to strengthen economics: 1) on the infrastructure side, CoreWeave continues to move into self-built data centers, as a way to gain greater operational control and accelerate innovation, with margin capture a secondary benefit; 2) growing momentum around Omni, which allows customers to run CoreWeave's software stack on infrastructure that CoreWeave does not own. We think this is strategically important because it expands the company's addressable market while leveraging third-party balance sheets. Combined with increasing software attach rates and managed services adoption, CoreWeave appears to be creating paths to growth and profitability that are less dependent on continuously adding GPUs and data center capacity.

Valuation/Risks

We remain Neutral rated and our 12-month price target is \$139, based on 22x EV/EBIT to CoreWeave's SNTM non-GAAP EBIT (unchanged). Our PT implies 17x on 2028 EBIT (maintained).

Key risks include: upside: rapid adoption of AI that supports demand for AI that continues to outpace supply, continued technical differentiation through future generations of GPUs, faster-than-expected path to positive FCF, stronger-than-expected demand for CoreWeave's broader suite of software solutions; downside: a reduction in overall demand for GenAI compute, increased competition from hyperscalers and neoclouds, disruptions to the procurement of data center equipment, difficulties raising additional financing at competitive rates.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at <https://www.gs.com/research/hedge.html>.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.
