Our [regular AWS web metric updates](#) from Q3'25 to Q1'26 showed exceptionally strong demand signals — the strongest since COVID. Following right on cue were reported ex-AI results for AWS rising from an estimated ~14% YoY in Q2'25 to an estimated 21.5% YoY in Q2'26. This growth created knock-on tailwind for the stack of cloud consumption names that support those workloads like modern databases (e.g., Snowflake), software infrastructure components (e.g., Twilio), cloud operations (e.g., Datadog), and application distribution (e.g., Cloudflare). **CAUTION! Our prior update flagged slowing web metric growth starting in May ([here](#), [here](#)). Update: this slowdown persists through early September** (Exhibit 1). Reminder: this is alt data with good historic fit, but for a variety of reasons it could stop being predictive. Fundamental explanation remains important.

Not a Q3 issue: ex-AI revenue growth should accelerate again. It is important to remember that our data effectively operates on a one-quarter lead relative to reported financials. What we are measuring is closer to incremental ARR added in the quarter, whereas reported results reflect postpaid billing and revenue recognition from existing ARR. The web metric trends started very strong in Q2, with weakness only emerging in May/June (Exhibit 2), meaning the Q2 QoQ growth is still reasonably strong. From a YoY growth basis, this is beneficially compared to a weak -1 year (tariffs and DOGE). As a result, we believe Q3 could show a further ~50 bps of acceleration in AWS ex-AI revenue growth.

Q4 could see a more meaningful deceleration in non-AI revenue growth. While web metric trends improved following the seasonally slow US July 4th holiday period, it wasn't enough to overcome the weak starting point. As a result the QoQ growth has consistently trailed 2025 levels throughout July and into early September. In fact, the divergence has widened further during the first two weeks of September, partly due to the later timing of Labor Day this year. We still need another two weeks of September data before drawing firm conclusions, but if current trends hold, **the resulting YoY growth headwind could be up to -100bps worse than what is currently embedded in our Q4 ex-AI revenue estimates** (our current model is for ~150bps headwind in Q4 to YoY growth in AWS' ex-AI revenue vs. the 22% we expect in Q3).

Net of AI, AWS and Datadog could see additional upside that offsets this weakness. A meaningful portion of the recent revenue acceleration at both AWS and Datadog was from AI revenue. We believe OpenAI and Anthropic are the two largest AI-native customers for Datadog and serve as important indicators of broader AI infrastructure demand. While Q2 had been relatively slow for OpenAI with [revenue growing 18% QoQ](#), momentum appears to have reaccelerated in Q3 where [ARR grew 20%+ month-over-month in July](#). Anthropic also showed impressive growth with [ARR at over \\$65B in July](#), up from \$47B in May and only \$9B at the end of 2025. The strength at these leading AI labs likely reflects accelerating token consumption across the broader AI-native ecosystem, which should benefit both AWS and Datadog's AI revenue. Therefore, weakness in traditional non-AI workloads may have a more limited impact on total revenue growth than our web metrics alone would suggest. However, for other consumption-linked names with limited AI exposure like TWLO and NET, the slowdown we are observing in AWS-related web metrics could translate into a more pronounced headwind to revenue growth during Q4.

No change to models, price targets, or recommendations.

Amazon: we maintain our Outperform rating and \$320 PT.

Datadog: we maintain our Market-Perform rating and \$237 PT.

Twilio: we maintain our Market-Perform rating and \$199 PT.

Cloudflare: we maintain our Market-Perform rating and \$164 PT.

DETAILS

EXHIBIT 1: AWS web metrics has been lagging behind the QoQ growth levels observed in 2025 Q3, with the second week of September dipping further due to a late Labor Day this year

Data for Sept 12, 2026, which is part of 2nd week: Sept data, is currently based on our estimate

EXHIBIT 2: Q2 started strong with AWS web metric trending above prior three year levels, but growth started to stall in May and did not recover in June, with the slower consumption trend persisting into Q3.

WHY DO WE CARE ABOUT AWS WEB METRICS DATA

SSO DATA SERVES AS A LEADING INDICATOR FOR AWS EX-AI REVENUE

As we have shared over the past few years, we have observed a strong correlation between -1 quarter (last quarter) engagement with AWS' single-sign-on ("SSO") page and current quarter revenue growth for AWS. This makes sense as the amount of human interaction with the SSO can't really oscillate that much due to personal work preference, and instead it more likely represents the portion of people actually tasked with doing projects on AWS. And because the amount of work any individual person can do (and is expected to deliver) remains pretty consistent over time, and their work turns into similar amount of revenue (with some curvature created by issues such as changing list prices and productivity, that can be adjusted for), then the volume of people will translate through the SSO volume into consumption volumes.

However, that level of human work comes before the revenue is observed. Why does this make sense? Their work turns into consumption, which gets more fully realized in the following period (between the ramp-up of their projects and usage, and timing within the quarter not providing full-quarter usage). Our data is available daily, so we've tested a variety of time-shifts, and find the highest correlation is ~1 quarter. Thus, the level of human engagement with the SSO last quarter is a leading indicator of revenue recognition changes in the current quarter.

But the engagement levels alone still have variation to fit. Over time, AWS changes its rate cards, offers credits, sees rationalization (that changes consumption per person), and even has sales behaviors that can pull forward some level of revenue. We try to adjust for these variations and look at the regression only for the "base" AWS revenue.

REMINDER: ALT DATA MAY DISCONNECT FOR A VARIETY OF REASONS, EVEN WITH GOOD HISTORIC FIT.

We have seen the data gyrate for short periods of time in the past. We had not brought up this deviation until now, given this reality. But at 4+ weeks of weakness it seems more likely a trend. With that said many things could go wrong on this read-through. For instance the vendor itself has even occasionally changed their collection methodology creating weirdness during a transition period. We are most interested when a fundamental explanation supports the data. We are continuing to gather data points that could refute (or further confirm) if the trend readthrough makes sense and is predictive of future financial results.

VALUATION METHODOLOGY**Amazon.Com Inc**

We value Amazon on a Price Target of \$320 using a 50/50 combination of SOTP method (which values the Retail segment at a 2027E EV/Sales multiple of 3x and the AWS segment at a 2027E EV/EBIT multiple of 25x), and a DCF using a WACC of 9% and a terminal growth rate of 3.5%.

Datadog Inc

Our price target of \$237 is an average of DCF (with 11% WACC and 3% terminal growth) and P / Sales (Next 5-8Q) comp multiple. P / Sales (Next 5-8Q) comp multiple of 16x is based on a peer-SaaS regression in their relevant >10% OpM Cloud SaaS cohort from our "Rule-of-40" based valuation framework analysis. We assume current Cloud SaaS multiples regression line remains consistent for 1+ year.

Twilio Inc

Our target price of \$199 is a 50/50 average of DCF (with 11% WACC and 3% terminal growth) and P / Sales (Next 5-8Q) comp multiple. P / Sales (Next 5-8Q) comp multiple of 5x is based on a peer-SaaS regression in their relevant OpM Cloud SaaS cohort from our "Rule-of-40" based valuation framework analysis. We assume current Cloud SaaS multiples regression line remains consistent for 1+ year.

Cloudflare Inc

Our price target of \$164 is an average of DCF (with 10% WACC and 3% terminal growth) and 16x P / Sales (Next 5-8Q) comp multiple. P / Sales (Next 5-8Q) comp multiple is selected in the 10%+ OpM Cloud SaaS cohort from our valuation framework analysis. We assume current Cloud SaaS multiples regression line remains consistent for 1+ year.

RISKS**Amazon.Com Inc**

Downside risks to our price target:

- Amazon is currently under investigation in multiple regulatory proceedings across both anti-trust and privacy, domestically and abroad. Any regulations or actions by either the FTC, DOJ, or EU agencies could negatively impact the company's financials and valuation.
- New investments such as Groceries, Healthcare, AI, and Other Bets could result in a new investment cycle resulting in elevated capital intensity, compressing operating margins, and lower FCF.
- Share loss across core businesses from new eCommerce entrants and main AWS competitors could derate the multiples associated with both core businesses

Datadog Inc

Downside risks beyond the macroeconomic risks include: increased competition from well-funded competitors in the industry; margin expansion slower than expected due to worse scale leverage in operating costs items; execution missteps or missed earnings expectations could lead to significant downside given the current valuation. Upside risks include: better product traction than expected, better than anticipated pace of new cloud workloads going into production, more major AI-customer wins, more upside in "Born-in-AI" customer growth.

Twilio Inc

Downside risks beyond the macroeconomic risks include: slow down in future synergetic M&A activities; slow down in overall growth in CPaaS sector, particularly from customer base that is exposed to retail consumption; increased competition from well-funded competitors in the industry; execution missteps or missed earnings expectations could lead to significant downside given the current valuation.

Upside risk beyond the macroeconomic risks include: better than expected unit economics from scale leverage; competitors in the industry fail to catch up with Twilio's offering.

Cloudflare Inc

Downside risks beyond the macroeconomic risks include: continued tie to cloud growth, execution risk in sales model transformation; less visibility in consumption and revenue predictability; building credible Act II / III products and demonstrating demand, hyperscalers moving into their core CDN and expansion security businesses, high valuation.

Upside risks include AI driving demand for their edge PaaS, and success selling a broader cybersecurity platform either of both of which exceed revenue expectations.

RATINGS DEFINITIONS, BENCHMARKS AND DISTRIBUTION**EQUITY RATINGS DEFINITIONS****Bernstein brand**

The Bernstein brand rates stocks based on forecasts of relative performance for the next 12 months versus the S&P 500 for stocks listed on the U.S. and Canadian exchanges, versus the Bloomberg Europe Developed Markets Large and Mid Cap Price Return Index EUR (EDME) for stocks listed on the European exchanges and emerging markets exchanges outside of the Asia Pacific region, versus the Bloomberg Japan Large and Mid Cap Price Return Index USD (JPL) for stocks listed on the Japanese exchanges, and versus the Bloomberg Asia ex-Japan Large and Mid Cap Price Return Index (ASIAX) for stocks listed on the Asian (ex-Japan) exchanges -unless otherwise specified.

The Bernstein brand has three categories of ratings:

- Outperform: Stock will outpace the market index by more than 15 pp
- Market-Perform: Stock will perform in line with the market index to within +/- 15 pp
- Underperform: Stock will trail the performance of the market index by more than 15 pp

Coverage Suspended: Coverage of a company under the Bernstein research brand has been suspended. Ratings and price targets are suspended temporarily, are no longer current, and should therefore not be relied upon.

Not Rated: A rating assigned when the stock cannot be accurately valued, or the performance of the company accurately predicted, at the present time. The covering analyst may continue to publish research reports on the company to update investors on events and developments.

Not Covered (NC) denotes companies that are not under coverage.

Bernstein brand stock ratings are based on a 12-month time horizon.

Autonomous brand – common stocks

The Autonomous brand rates common stocks as indicated below. As our benchmarks we use the Bloomberg Europe 600 Financials Price Return Index (E600BK) and Bloomberg Europe Dev Mkt Financials Large and Mid Cap Price Ret Index EUR (EDMFI) index for developed European banks and Payments, the Bloomberg Europe 600 Insurance Price Return Index (E600IN) for European insurers, the S&P 500 and S&P Financials for US banks and Payments coverage, S5LIFE for US Insurance, the S&P Insurance Select Industry (SPSIINS) for US Non-Life Insurers coverage, the Bloomberg Emerging Markets Financials Large, Mid and Small Cap Price Return Index (EMLSF) for emerging market banks and insurers and Payments, and the Bloomberg Japan Financials Large & Mid Cap Price Return Index (JPFILM) for Japanese Financials. Ratings are stated relative to the sector (not the market).

The Autonomous brand has three categories of common stock ratings:

- Outperform (OP): Stock will outpace the relevant index by more than 10 pp
- Neutral (N): Stock will perform in line with the market index to within +/- 10 pp
- Underperform (UP): Stock will trail the performance of the relevant index by more than 10 pp

Coverage Suspended: Coverage of a company under the Autonomous research brand has been suspended. Ratings and price targets are suspended temporarily, are no longer current, and should therefore not be relied upon.

Not Rated: A rating assigned when the stock cannot be accurately valued, or the performance of the company accurately predicted, at the present time. The covering analyst may continue to publish research reports on the company to update investors on events and developments.

Those denoted as 'Feature' (e.g., Feature Outperform FOP, Feature Under Outperform FUP) are our core ideas.

Not Covered (NC) denotes companies that are not under coverage.

Autonomous brand common stock ratings are based on a 12-month time horizon.

Autonomous brand – preferred stocks

The Autonomous brand has three categories of preferred stock ratings:

- Outperform (OP): The total return of the preferred instrument is expected to outperform preferred securities of other issuers operating in similar sectors or rating categories over the next six months.
- Neutral (N): The total return of the preferred instrument is expected to perform in line with preferred securities of other issuers operating in similar sectors or rating categories over the next six months.
- Underperform (UP): The total return of the preferred instrument is expected to underperform preferred securities of other issuers operating in similar sectors or rating categories over the next six months.

Autonomous preferred stock ratings are based on a 6-month time horizon.

AUTONOMOUS CREDIT RESEARCH

Where this report contains investment recommendations for credit instruments, as defined in article 3(1)(35) of the Market Abuse Regulation, the information below is presented to comply with its disclosure requirements.

The report may also include reference(s) to published opinions by other Autonomous or Bernstein analysts covering the equity securities of the issuer(s) referenced herein. Please note an investment recommendation for credit instruments published by the author(s) of this report may differ from the published view of the analyst covering equity securities for the issuer(s) contained in this report and vice versa.

CREDIT RATINGS DEFINITIONS

The Autonomous brand has three categories of credit ratings:

- Credit Outperform (C-OP): The total return of the Reference Credit Instrument is expected to outperform the credit spread of bonds of other issuers operating in similar sectors or rating categories over the next six months.

- **Credit Neutral (C-N):** The total return of the Reference Credit Instrument is expected to perform in line with the credit spread of bonds of other issuers operating in similar sectors or rating categories over the next six months.
- **Credit Underperform (C-UP):** The total return of the Reference Credit Instrument is expected to underperform the credit spread of bonds of other issuers operating in similar sectors or rating categories over the next six months.

Autonomous credit ratings are based on a 6-month time horizon.
