

JPM | APAC Technology - Memory / AI Development

Duncan Wagner
+852 2800 8874
duncan.wagner@jpmorgan.com

Memory: remains the most frequently questioned sub-sector by investors; strategist Mixo Das SG marketing indicated divided views of 'higher-for-longer' pricing vs memory de-spec concerns across HBM and even now NAND solutions, as per DeepSeek V4.1 KV significant Cache reduction amidst industry supply, specifically from YMTC. Gokul also notes bandwidth and interconnect have replaced pure memory capacity as the critical bottlenecks. SPE historically trades as a second derivative of peaking memory names and / or pricing and remained governed by investor positioning. Opening bell, a divergence has stood out between TEL, which the bulls, mainly longer-term investors, cite HBM/DRAM order strength and N2 logic gains vs skeptics of margin improvement as Mio sees mgmt. hitting their 50% GM target earlier than expected into F4Q27 (Mar '27) vs F1H28; and Lasertec, which was the most highly requested name last week as the co believes can see an additional ~3 EUV Layers needing Actinic Inspection Tools once qualified at TSMC A14 process and Purchase Orders granted (expected CY27), in addition a reset of FY6/27 investor order expectations which were ~Y400bn into the F4Q26 (June '26) print vs actual Y350bn midpoint

AI Development: US TMT Spec Mark Schilsky elaborates on the revelation that Recursive Self-Improvement (RSI) 'is starting to happen across the industry.' Secondly, Mark posits that he does not believe AI development is going to materially slow down, rather, in fact, it is more likely to accelerate if RSI is near [link](#). Agentic AI consumes increased CPUs as the CPU : GPU ratio remains on a pathway to approach parity; Nikkei reported Fujitsu may be set to intro their CPU on N2 early in Nov ahead of CY27 launch [link](#) and press reports Kinsus set to increase its FY27/28 capex to NT\$16bn/NT\$19bn from FY26 NT\$14bn, specifically geared towards ABF Substrates for CPUs - Gokul also notes Kinsus slated in development w/ TSMC for an EMIB-T solution. In order of preference, Substrate, specifically Unimicron, may be right the investors' pecking order behind Advanced Logic (TSMC) and Advanced Packaging (ASE)

Corporate / Analyst Access: Please join Global Tech Spec sales team Mark Schilsky, Josh Meyers, Scott Silver & I Thurs Sep 17 8am NY ET / 1pm UKT [link](#); Jay Kwon next Tues Sep 22 4pm HKT / 9am HKT Mr. Tian, China Memory Expert w/ a Closer Lens at the NAND Market [link](#)

Please welcome Zoe Xu to our global tech spec team, focused on China tech and APAC Internet, happy to add to her distribution list [link](#) and connect

Key Highlights Today

- **TDK (OW PT Y4,500):** Passive components briefing strategy, Akita and Yamagata plant visits – Akinori Kanemoto [link](#)
- **Asia Equity Strategy:** Tech/AI complex earnings concentration a trade to embrace – Rajiv Batra / Mixo Das [link](#)

Detailed Highlights

TDK (OW PT Y4,500): Passive components briefing strategy, Akita and Yamagata plant visits – Akinori Kanemoto [link](#)

- **We visited 3 TDK plants Sep 11:** Honjo Plant West Site (MLCCs) in Akita, and the Sakata Plant (common mode filters) and Tsuruoka East Plant (thin-film inductors) in Yamagata. We also attended a briefing on the passive components strategy, w/ a positive overall impression. TDK is extending their competitiveness in auto high-voltage MLCCs and high-temp-condensation types into AI server applications. Its proprietary vapor-deposited foil and formation processes already make it the industry leader in snap-in aluminum electrolytic capacitors for AI servers, and we expect revenue to grow from here. Revenue for thin-film inductors looks set to grow substantially in optical transceivers, vertical power delivery integrated voltage regulators (IVRs), and embedded components for AI accelerators as well as auto. TDK is also highly competitive in areas as DC-link power capacitors for solid-state transformers (SSTs). TDK plans to grow passive component revenue for AI data centers 10x from FY25-30 from Y10bn -> Y100bn. We believe this plan is comfortably achievable and see scope for upside

Asia Equity Strategy: Tech/AI complex earnings concentration a trade to embrace – Rajiv Batra / Mixo Das [link](#)

- **Investors in our SG meetings appear to be re-engaging w/ 1H26 trades.** Earnings and participation measures, as well as our expectations about macro conditions, reinforce our view that any rotation from Tech into Cyclical or Defensives remains more tactical than durable. We believe the earnings concentration in the Tech/AI is a trade to embrace, and we believe the structural catalysts underpinning this view – the durability of s-d imbalance and the continuity of capex spend have been reinforced. NVDA ~70% DC rev growth outlook implies stronger DC capex growth than consensus 40-50%. TSMC indicated rising confidence in AI demand growth and sustainability, w/ visibility extending into 2029-30. Longer-run earnings growth continues to favor tech, w/ renewed price action leadership. Memory remains the most highly debated sub-sector w/n tech, w a divided few on higher-for-longer vs the memory, and specifically, HBM de-spec trend

Sector Key Newsflow

- **Kioxia** Is Said to Consider Raising \$10 Billion in US Listing ([Bloomberg](#))
- **TSMC** to Hike Advanced Chipmaking Capacity 22% by Mid-2027: EDN ([Bloomberg](#))
