Fine-tune model post results - STM seminar the next catalyst

Model update: We update our model following 9M results. We leave our FY group organic growth of 7.3% (7.9% ex Exhibitions) unchanged and increase our margin by 10bps to 35.3%. Our 2027 EPS falls by 1% to 158p (cons. 158p) due to an FX headwind since our last update. Our 2030 EPS falls by 5.5% to reflect the higher RELX share price and reduced accretion from buybacks (we hold ND/EBITDA at c2x and assume excess cashflow post dividends and M&A is used for buybacks). RELX continues to offer 2027-30 EPS growth of 14% pa and our DCF-based Dec-27 PT of 5,070p remains unchanged.

RELX will host an STM seminar on the 3rd of November. Please refer to this strategic developments note in which we discuss LeapSpace's product, pricing and take-up and the opportunity for RELX to leverage its content, data & tools, customer relationships and AI to increase its value proposition and expand its addressable market. In this note we discuss the Future of Research Publishing and here the (non) Impact of OMB. If you would like to go back to the basics of academic research, peer review, subscription and open access, then please refer to the appendix of this Info Service Series note on Health / STM. Our forecasts model an uplift from LeapSpace and imply STM organic growth accelerates to 8% by 2033. We see the potential for this acceleration to be pulled forward and for the longer term growth to be 10% or more in the longer term given the scale of the potential opportunity.

Valuation: RELX trades on c19x 2027E earnings, a c20% discount to its US peers. Over the next three years, we expect it to return 12% of its market cap in dividends and buy back 15% of its shares. This, combined with visible and improving growth, leaves RELX trading on just c11x 2030E earnings. We would argue that it should trade on c25x in 2030 to reflect recurring revenues, c8% organic growth, 10% EBITA growth, close to 40% margins and 95-100% cash conversion – this would imply 100% upside over three years.

Summary Investment Thesis and Valuation

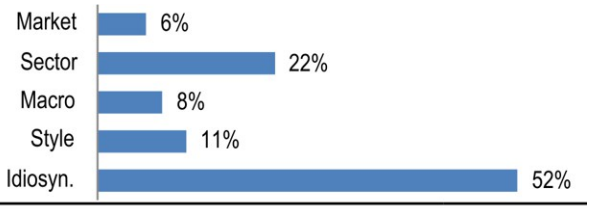

Investment Thesis

RELX offers structural growth supported by increasingly sophisticated information-based analytics and decision-making tools. RELX's STM division offers strong cash generation and predictable revenues, which, when combined with business and geographic diversification at the group level, results in the best earnings visibility/quality in the media sector.

Valuation

Our Dec-27 PT is 5,070p. We assume a WACC of 8.3% and a terminal growth rate of 4.3%.

Appendix - Overview of recent STM notes:

The evolution of scientific research

In this note we consider the evolution of scientific research, the role of publishers and the impact of AI. Scientific publishers organise peer review, establish the soundness and significance of research, protect the scientific record and disseminate validated findings. As AI reduces the cost of producing plausible scientific content, trusted mechanisms for distinguishing robust research become more, rather than less, valuable. We identify three complementary layers: the trusted scientific record; the research workspace; and scientific intelligence and execution. LeapSpace combines Elsevier content, Scopus and research applications across funding, discovery, collaboration, writing and publication. Nature Research Assistant focuses on literature understanding and manuscript development; Claude Science provides reasoning, coding, computation and orchestration. We argue that a serious research workspace cannot give a complete answer if it cannot include research from rival publishers. Some form of cross-publisher access appears economically rational, but the likely outcome is selective rather than unrestricted reciprocity. AI should increase the volume of research requiring peer review, while research workspaces expand publishers' role and addressable market beyond publication.

Strategic developments

In this note we set out four benefits of AI for STM: internal efficiencies and faster product development; more research requiring peer review; expansion into research planning, workflows and discovery; and applying intelligence to scientific knowledge. LeapSpace brings together peer-reviewed research from Elsevier and third-party publishers with Elsevier's data and tools in an end-to-end workspace spanning funding, discovery, analysis, collaboration, writing and publication. Elsevier reports several hundred thousand monthly users across thousands of organisations; 97% of surveyed users report time savings, with more than half reporting savings of over 50% of their research time. Unlike general AI tools that may rely on unverified web data or incomplete datasets, LeapSpace applies intelligence to trusted, peer-reviewed content in a publisher-neutral environment, with traceable citations, human oversight and privacy by design. Pricing combines a free tier, paid individual subscriptions and quote-based institutional licensing.

OMB concerns are overstated

In this note we assess the proposed OMB changes covering Article Processing Charges (APCs) and academic journal subscriptions. These would generally exclude APCs from

eligible grant costs, subject to agency exceptions, and may exclude journal subscriptions from federal awards. At publication, the proposals were not final and were likely to apply to new awards. We argue this is mainly a question of who pays, not whether publishers are paid. If total federal research funding is maintained but reweighted towards direct research, non-federal funding is freed up for APCs and subscriptions, although reallocation may be harder for smaller institutions and less well-funded researchers. Immediate public access does not remove the need for peer review or the need to pay for it. US federally funded research represents c.4-5% of global articles, with a three- to six-year funding-to-publication lag. Multi-year contracts, mission-critical content, journal quality and substantial excess demand for publication limit exposure. APC caps could distort journal choice, visibility and collaboration.

Risks to Rating and Price Target
The main risks to achieving our target price and rating include:

- GenAI does not provide the level of growth uplift that we expect (particularly in Legal and STM)
- The business proves less resilient than we expect with greater slowdown in cyclical revenues in parts of RBA and Exhibitions;
- Higher product investment
- FX moves
- Financial leverage is higher than expected and/or cash returns lower than expected
- Any negative open access newsflow
- Any market preference for cyclical stocks over defensives, or investor rotation away from perceived "bond proxy" stocks

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, https://www.jpmorganmarkets.com.
