Cameco (Outperform) disclosed significant additional color around their 49% stake in Westinghouse in their 2Q26 MD&A ([CCJ 2Q26 Results: Journey to the Westinghouse IPO begins?](#)). We had previously investigated its value ([Bernstein Uranium/Nuclear: A reasonable DCF underwrites Cameco's value](#)) but acknowledged a lack of complete disclosure.

Westinghouse is likely moving closer to the public markets. On July 31, 2026, the company confidentially submitted a draft S-1 to the SEC for a proposed IPO. The filing comes less than three years after Cameco and Brookfield acquired Westinghouse in November 2023 for an enterprise value of roughly \$7.9bn. Today, Cameco owns 49% of the business and Brookfield owns 51%.

We remind investors: In October 2025, the U.S. government, Cameco and Brookfield agreed to a framework intended to support at least \$80 bln of new Westinghouse reactor construction in the U.S. If the government makes the required investment decisions and enters definitive agreements for that buildout, its participation interest vests, giving it 20% of distributions above a \$17.5bln threshold. If that interest has vested and Westinghouse can achieve an underwritten IPO valuation of at least \$30bln by January 2029, the government can require an IPO and its participation interest can convert into a five-year equity warrant. At a \$30bn valuation, management has illustrated that as roughly an 8% interest in Westinghouse.

More recently, DOE conditionally committed up to \$17.5bln of financing for long-lead equipment supporting as many as 10 AP1000 reactors. Combined with a growing international pipeline, Westinghouse now has considerably more new-build opportunities than at any point in the recent past.

Given the timing and backdrop, we lay out a quick 20 questions (as a start!) that can kickoff discussions with management.

Investment implications: We like Cameco (CCJ) for (1) its high-quality uranium assets, (2) its disciplined management team and track record, and (3) its 49% ownership stake in Westinghouse, which provides both potential IPO upside and exposure to Westinghouse's expanding reactor pipeline.

DETAILS

STRATEGY

1. What strategic capabilities does being a public company unlock for Westinghouse that are harder to achieve under the current Cameco/Brookfield ownership structure?
2. If we came back five years from now and Westinghouse had materially exceeded the financial expectations investors set at IPO, what would most likely have driven that upside?

STRUCTURE

1. IPO structure and use of proceeds: How should investors think about the potential mix of primary versus secondary shares in an IPO? If Westinghouse raises primary capital, what would be the highest priorities for those proceeds?
2. If the U.S. government's participation interest ultimately converts into a warrant around an IPO, how should investors think about the mechanics of that dilution relative to existing owners?

OPERATIONS

1. When investors look at New Plants new order intake alongside reported backlog, what is the best way to bridge those figures into future revenue? Can a meaningful portion of an order be executed and recognized as revenue within the same year and therefore never appear in period-end backlog? How should we think about the typical lag between order intake, backlog and revenue recognition?
2. For a typical AP1000 project, how should we think about the portion of eventual Westinghouse project value that becomes contractually committed at each stage - FEED, Early Services, first long lead item order and full procurement? Is only a small portion of the eventual \$8–11 bln two-unit revenue opportunity contracted during FEED and ESC, with the majority entering backlog once long-lead procurement begins?
3. At what point in the AP1000 project lifecycle does revenue become financially meaningful, and which milestones create the biggest step-up in annual revenue recognition?
4. For projects currently in FEED and Early Services, can you give investors a sense of the typical Westinghouse revenue opportunity per reactor before the project reaches long-lead procurement?
5. How should investors think about conversion through the AP1000 funnel, from FEED to Early Services, then into long-lead procurement and ultimately full project execution? Are there multiple bidding processes at different stages?
6. How should investors think about the path to NOAK economics in Europe? Can AP1000 projects in different European countries leverage a common design, supply chain, and construction experience, or does each market effectively require its own learning curve?
7. For a near-term two-unit AP1000 project, Westinghouse estimates \$8–11 bln of revenue, or roughly 40–45% of total project value. What are the major components inside that scope?
8. Historically, Westinghouse discussed a wider range for new build margins (16% - 19%). What are the biggest factors that could drive margins above or below that level?
9. Outside the US, how should investors think about the durability of AP1000's competitive position? What prevents those competitors from taking a greater share?
10. How should we think about Westinghouse's ability to maintain oth its 40-45% share of project value and 20% normalized EBITDA margin?

11. How should investors think about cash generation over the life of an AP1000 project relative to reported EBITDA? Do customer advances and milestone payments generally allow cash collection to lead revenue recognition?
12. If a project experiences a Vogtle-like delay driven by site labor or civil construction, when would that affect Westinghouse revenue, margin or working capital versus remaining primarily the owner's or construction contractor's risk?
13. You estimate roughly \$45–60mn of annual average Operating Plants revenue for a two-unit AP1000 project once the reactors are operating. How should investors think about the EBITDA, free cash flow and business durability? and revenue-quality characteristics of that opportunity?
14. Should margins resemble the existing Operating Plants business?
15. Within that \$45–60mn, how much comes from recurring fuel and outage services versus more episodic parts, engineering and long-term-operations work?
16. What converts the 20 U.S. reactors from pipeline into backlog? For the U.S. government-supported AP1000 opportunities, what is the next milestone investors should watch that turns a reactor from a government-supported opportunity into contracted Westinghouse economics? Is the key event partner, utility selection or formation of the funding vehicle or customer equity commitment?

DISCLOSURE APPENDIX

I. REQUIRED DISCLOSURES

References to "Bernstein" or the "Firm" in these disclosures relate to the following entities: Bernstein Institutional Services LLC (April 1, 2024 onwards), Sanford C. Bernstein & Co., LLC (pre April 1, 2024), Bernstein Autonomous LLP, BSG France S.A. (April 1, 2024 onwards), Sanford C. Bernstein (Hong Kong) Limited 盛博香港有限公司, Sanford C. Bernstein (Canada) Limited, Sanford C. Bernstein (India) Private Limited (SEBI registration no. INH000006378), Sanford C. Bernstein (Singapore) Private Limited, Sanford C. Bernstein Japan KK (サンフォード・C・バーンスタイン株式会社) and analysts employed by Société Générale Africa Technologies & Services to produce Bernstein research under a Global Services Agreement in place between Bernstein and Société Générale.

Bernstein is part of a joint venture between Société Générale (SG) and AllianceBernstein, L.P. (AB). Unless specifically noted otherwise, for purposes of these disclosures, references to Bernstein's "affiliates" relate to both SG and AB and their respective affiliates.

VALUATION METHODOLOGY**Cameco Corp**

We rate Cameco Outperform and value Cameco at \$135/sh (CAD \$189/sh) using a 23x EV/EBITDA multiple on its 2030E EBITDA of CAD\$3.2bln.

RISKS**Cameco Corp**

Downside risks to our price target include:

1. Nuclear safety - related risks

Nuclear power safety concerns, often due to reactor mismanagement, can cause delays in permits and construction. This slowdown in the nuclear energy sector adoption directly reduces the demand for Cameco's uranium, hitting its sales and revenue. Public fear and regulatory tightening can further dampen the market.

2. High labor costs

Cameco faces high costs for skilled labor in the nuclear industry. The limited supply of specialized workers drives up wages, squeezing profit margins. Labor - market fluctuations like shortages or strikes can disrupt production and increase expenses.

3. The rise of plutonium & thorium use could reduce demand for uranium

The growing use of plutonium and thorium in Fast Breeder Reactor (FBRs) and Molten Salt Reactor (MSR) threatens Cameco's uranium market share. However, Plutonium's high radioactivity and potential for misuse lead to strict regulations and possible public opposition, and the development of FBR and MSR are still in the early stage with more exposure in Asia. Considering Cameco's small exposure in Asia (17% uranium & 5% of UF₆ sold to Asia in 2024), the impact of this Gen IV reactor development will be limited on Cameco.

4. Inconsistent operation and transparency in Inkai with Kazatoprom

In the Inkai project with Kazatoprom, inconsistent operations can lead to production inefficiencies and unexpected costs. Lack of transparency may cause misunderstandings and disputes between the partners. Both issues can undermine the project's performance and Cameco's returns.

RATINGS DEFINITIONS, BENCHMARKS AND DISTRIBUTION**EQUITY RATINGS DEFINITIONS****Bernstein brand**

The Bernstein brand rates stocks based on forecasts of relative performance for the next 12 months versus the S&P 500 for stocks listed on the U.S. and Canadian exchanges, versus the Bloomberg Europe Developed Markets Large and Mid Cap Price Return Index EUR (EDME) for stocks listed on the European exchanges and emerging markets exchanges outside of the Asia Pacific region, versus the Bloomberg Japan Large and Mid Cap Price Return Index USD (JPL) for stocks listed on the Japanese exchanges, and versus the Bloomberg Asia ex-Japan Large and Mid Cap Price Return Index (ASIA) for stocks listed on the Asian (ex-Japan) exchanges - unless otherwise specified.

The Bernstein brand has three categories of ratings:

- Outperform: Stock will outpace the market index by more than 15 pp
- Market-Perform: Stock will perform in line with the market index to within +/- 15 pp
- Underperform: Stock will trail the performance of the market index by more than 15 pp

Coverage Suspended: Coverage of a company under the Bernstein research brand has been suspended. Ratings and price targets are suspended temporarily, are no longer current, and should therefore not be relied upon.

Not Rated: A rating assigned when the stock cannot be accurately valued, or the performance of the company accurately predicted, at the present time. The covering analyst may continue to publish research reports on the company to update investors on events and developments.

Not Covered (NC) denotes companies that are not under coverage.

Bernstein brand stock ratings are based on a 12-month time horizon.

Autonomous brand – common stocks

The Autonomous brand rates common stocks as indicated below. As our benchmarks we use the Bloomberg Europe 600 Financials Price Return Index (E600BK) and Bloomberg Europe Dev Mkt Financials Large and Mid Cap Price Ret Index EUR (EDMFI) index for developed European banks and Payments, the Bloomberg Europe 600 Insurance Price Return Index (E600IN) for European insurers, the S&P 500 and S&P Financials for US banks and Payments coverage, S5LIFE for US Insurance, the S&P Insurance Select Industry (SPSIINS) for US Non-Life Insurers coverage, the Bloomberg Emerging Markets Financials Large, Mid and Small Cap Price Return Index (EMLSF) for emerging market banks and insurers and Payments, and the Bloomberg Japan Financials Large & Mid Cap Price Return Index (JPFILM) for Japanese Financials. Ratings are stated relative to the sector (not the market).

The Autonomous brand has three categories of common stock ratings:

- Outperform (OP): Stock will outpace the relevant index by more than 10 pp
