Investing in Asia is not a monolithic investment decision. The investment environment is increasingly differentiated between markets, sectors, and themes. We remain positive on the region with a focus on tech-driven earnings and an emphasis on alpha opportunities.

- **Asian equity markets have evolved**: The region is now the world's 2nd largest after the US at $50tr market cap, more liquid, and more tech-driven (tech is now about half of index cap and earnings). Market and sector leadership has changed, single stock concentration has increased, and macro sensitivity has moderated. These changes require a differentiated investment approach.

- **Tech-driven earnings recovery**: After 15 years of sub-par growth, regional earnings will grow 34% from 2026-2028 propelled largely by the tech sector. We expect info tech to grow at 20% CAGR over the next 5 years following exceptional memory-sector growth in 2026 as AI-driven compute demand drives a strong and long tech hardware cycle. Accordingly, we revise our 10-year MXAPJ index annual earnings growth forecast to 10%, 1pp above our previous estimate.

- **Valuation – separating tech from non-tech**: We use a DDM approach to value tech as this takes current super-normal profits into explicit account and apply our top-down macro modeling to the non-tech part of the region. We estimate 16% valuation upside for hard tech, 3% for non-tech, and 10% for the MXAPJ regional index as whole to 11.3x P/E.

- **Implementation**: We maintain a constructive view regionally, expecting 26% 12m USD price return and 14% 10yr annual average USD total return. Our focus remains on tech-driven North Asia with selected diversification away from tech. Key themes include AI, power, non-tech earnings compounders, and shareholder return.

Investors should consider this report as only a single factor in making their investment decision. For Reg AC certification and other important disclosures, see the Disclosure Appendix, or go to www.gs.com/research/hedge.html.

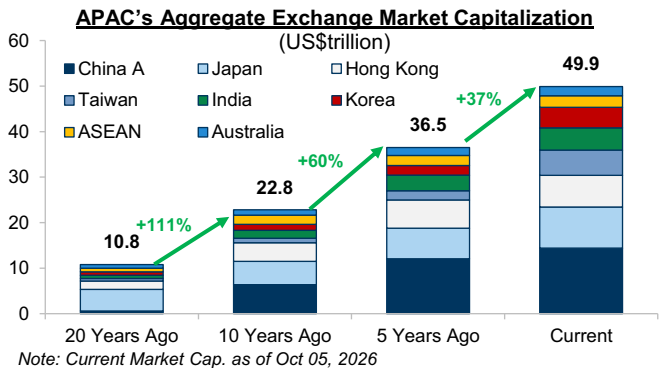

Asian evolution: The region is larger, more liquid, more tech-driven, and more differentiated

The composition of Asian equity markets has changed in recent years. The region's market capitalization and trading liquidity are considerably larger, and the relative size of markets and sectors has tilted towards technology. This impacts both the fundamental earnings outlook for the region and how it should be valued. We analyze these developments in this and several ensuing sections with a view to providing investors an updated perspective on how to invest in Asian equities. **The watchword is differentiation**, because thinking of Asia as a monolithic asset allocation decision is outdated. Instead, a greater degree of specificity is needed, which will help drive investment returns.

Asian equity markets are much larger

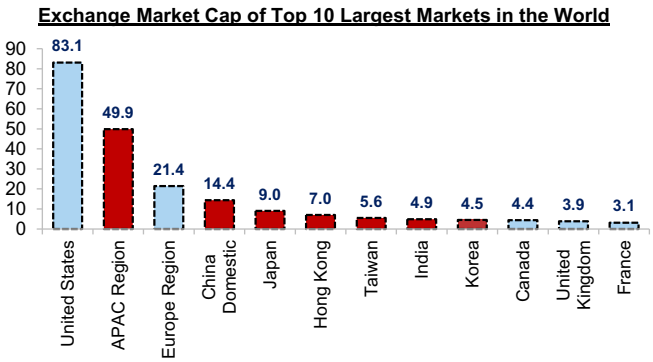

The aggregate market capitalization of Asian equity markets has increased 37% and 120% over the past 5 and 10 years to $50tr. Asian markets now account for 6 of the top 10 markets and occupy positions 2-7. While the US is by far the dominant market at $83tr market cap, Asia is the clear second-largest region globally with Europe a now distant third at $21tr, less than half the size of Asia.

Exhibit 2: Asian equity markets are now 6 of the top 10 global markets and the APAC region is the second largest

Source: Bloomberg, Local Stock Exchanges, Goldman Sachs Global Investment Research

Index composition has changed

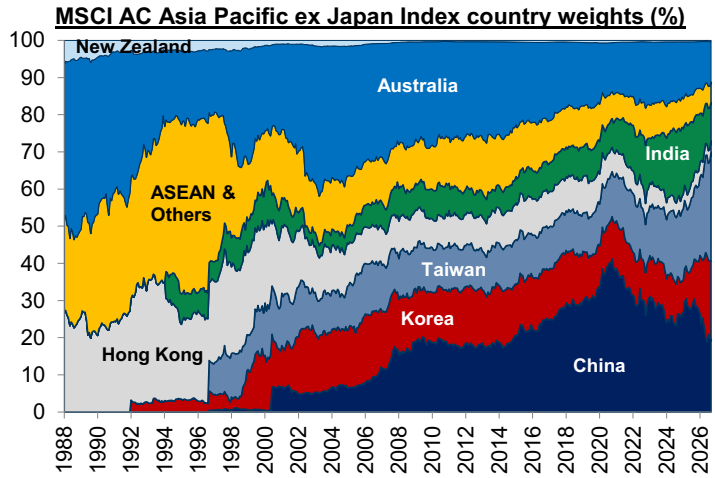

The make-up of the region (ex-Japan) has shifted meaningfully in recent years. **Taiwan** is now the largest market by index cap at 29%, while **Korea** has moved into second place at 22%. Together, these tech-heavy markets now make up half the regional index cap. **China**, which held over a 40% index share at its peak in late 2020 is now 19% and **India**'s share has compressed from 19% a few years ago to 10% currently. **Australia**'s index share has steadily dropped to its current 11% level and the **ASEAN** markets, which were well over 30% of the regional index weight in the mid-1990s, are now just 6%.

The main driver of these market changes is the **information technology** sector which now accounts for 43% of the index cap. It recently displaced **financials**, which had occupied pole position for three decades. As we note further below, this impacts the macro sensitivity of the region, because info tech is driven by more sector-specific dynamics whereas banks are highly sensitive to macro developments. Other noteworthy

sector changes include the diminished weight of **internet & entertainment** (from 22% at the late 2020 peak to 7%), **telecom** (from 15% in 2000 to 1%), and **real estate** (from 13% in late 1997 to 2%).

The region has also become more concentrated at the single stock level. The top 10 stocks now account for 41% of aggregate weight, which is 4.0 s.d. above the long-term mean of about 24%. The top 3 stocks – TSMC, Samsung Electronics, and SK Hynix – now comprise 29% of the MXAPJ regional index, and market concentration has increased in every market except India and China over the past decade.

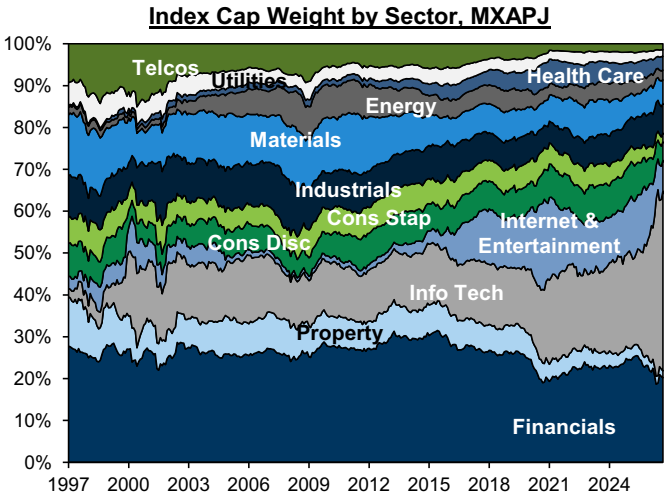

Exhibit 3: Taiwan and Korea now account for half of the MXAPJ index weight, having displaced China which was the dominant market

	Historical		Latest (Sep-26)
Market	Max Wgt.	Peak Date	Wgt.

Earnings drivers have changed

The composition of regional earnings has changed significantly, and this accounts for the shifts in market and sector index weightings noted above. Most important is the rise of **information technology**, which now accounts for 44% of MXAPJ index earnings. **Financials** are currently second at 24% of regional profits, having previously peaked at 39% a decade ago. The heavy concentration of technology hardware and semiconductors in north Asian markets has led **Korea** to become the top market by earnings at 38%, followed by **China** and **Taiwan** at 24% and 16% respectively. Even allowing for 'over earning' by the Korean memory manufacturers (which we discuss later), the regional profit composition has changed meaningfully compared to 1-2 decades ago.

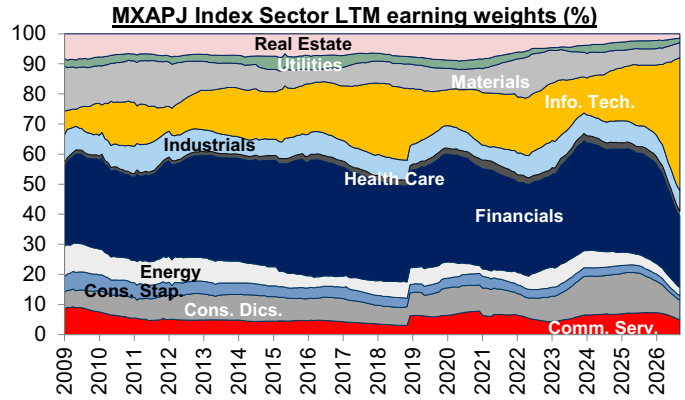

Exhibit 6: Korea is now the largest market by earnings share, followed by China and Taiwan

- **Regional markets' macro sensitivity has moderated as importance of tech has increased**

The dominant profit and index cap share of technology is changing the way the region's equity markets trade macro variables. The r-square or 'goodness of fit' of our macro model has dropped from a fairly persistent 50-80% range over the past two decades to 30% at present. This shows that investors cannot simply use a top-down framework to determine their regional equity views. Instead, they should now use a hybrid approach which includes the macro backdrop together with sector-specific analysis, most notably of info tech. This is underscored by the high correlation of the equal-weight regional index with our AI basket, i.e. the region is currently trading more in line with micro than macro variables. More broadly, the r-squares of individual regional markets and sectors to key macro variables such as US economic growth, US rates, and commodity prices differ meaningfully, supporting the argument for a more granular approach to investing in Asian equities.

Exhibit 8: Regional equity returns have become less sensitive to macro variables, more correlated with info tech, and with notable variation in macro sensitivity between markets and sectors

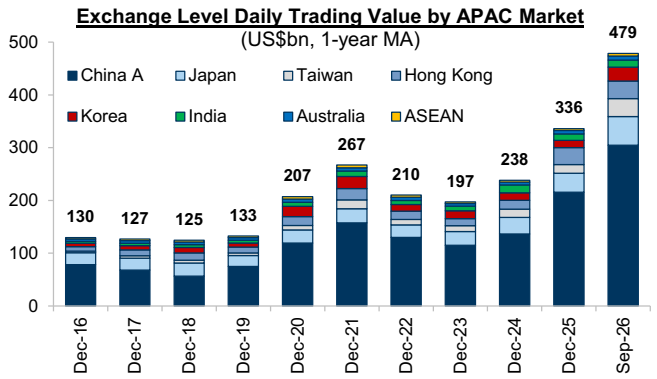

Source: FactSet, MSCI, Goldman Sachs Global Investment Research

Markets are more liquid but with high intraregional variation

Trading liquidity has increased even more than market capitalization. Aggregate daily value traded has nearly doubled over the past 5 years and more than tripled over the past 10 years to reach $480bn currently. However, the distribution within the region is very skewed. The onshore **China** market's size and active retail and quant fund cohorts are driving daily turnover levels of over $300bn, representing 64% of the region's aggregate value. **Japan**'s share of regional value traded has dropped, but it is still the second most liquid market at $54bn daily turnover and 11% share. **Hong Kong**, **Taiwan**, and **Korea** cluster around $26-34bn value traded and 6-7% regional share. Liquidity drops for **India** and **Australia**, although both have increased over the past decade. **ASEAN** has experienced a 5% decline in daily value traded over the past 5 years to just $5bn for the five markets of Thailand, Singapore, Indonesia, Malaysia, and Philippines and its share of regional turnover is just 1%.

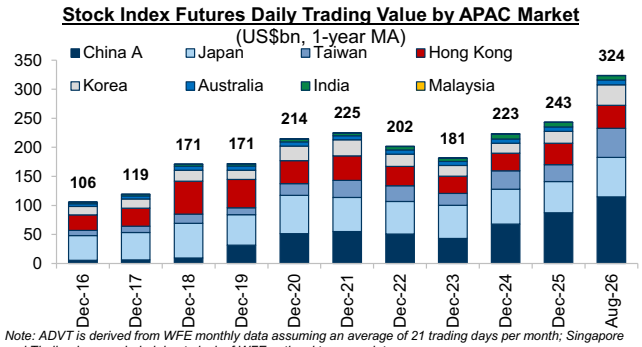

Futures market liquidity has also increased in parallel with cash equity trading value and works synergistically to enhance cash trading by providing a low cost and capital-efficient way to hedge market exposure. Aggregate daily turnover of index futures across Asia's regional exchanges is $324bn, +44% over 5 years and 3x over 10 years. The trading value is more evenly distributed between the larger markets of onshore China, Japan, Taiwan, Hong Kong, and Korea. Single stock futures trading value is about 10% of index future trading value but has also grown significantly (+85% over 5 years and 5x over 10 years).

Exhibit 9: Regional equity market average daily value traded has doubled in the past 5 years but is highly skewed towards north Asia

Source: Bloomberg, Local Stock Exchanges, Goldman Sachs Global Investment Research

Exhibit 10: Futures markets have also become more liquid

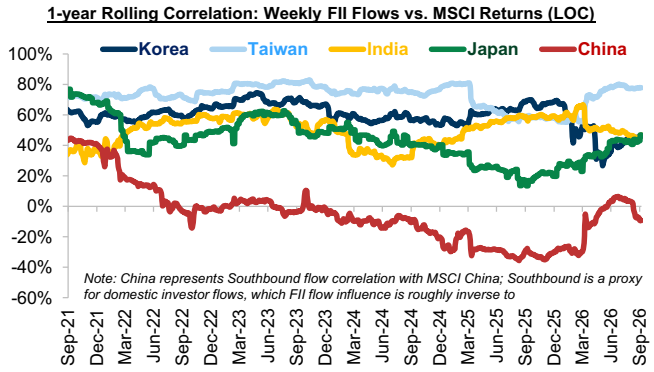

Note: ADVT is derived from WFE monthly data assuming an average of 21 trading days per month; Singapore and Thailand are excluded due to lack of WFE notional turnover data.

■ Foreign investors have an important, but varying, influence on Asian equities

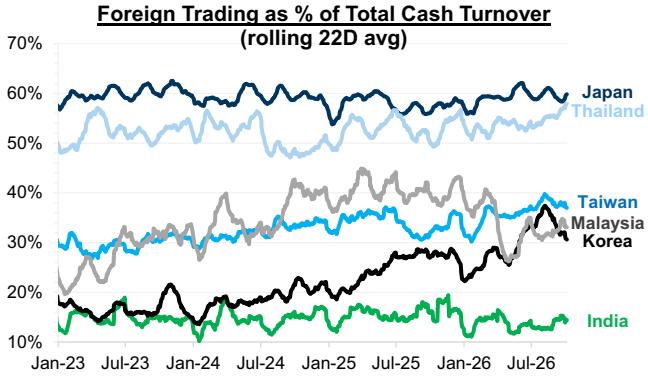

Foreign investor flows have been influential for Asian equity returns for a long time but there are variations both within and between markets that underscore the theme of differentiation with respect to investing in the region. First, rolling weekly correlations of FII flows vs. local index returns show marked fluctuations. Korea provides a recent example where retail investors drove the 1H26 equity rally but the influence of foreign investors rebounded in 3Q. Japan shows a similar pattern over a longer stretch, where FII correlations with local returns dropped steadily and sharply during 2023-25 but rebounded subsequently. Second, FII correlation levels and patterns differ between markets, indicating shifting FII market focus and varying influence of domestic investors, both retail and institutional. Third, foreign investor share of total cash turnover ranges from roughly 60% for Japan to about 15% for India and low single digit for onshore China. Of note, FII share of trading has trended up in Taiwan and Korea as these markets' technology sectors have assumed greater importance.

Earnings: Tech-driven recovery from an extended period of tepid growth

Asia is recovering from an extended earnings recession. Tech is the key driver and, within this, memory is a prominent part. To frame near and longer-term earnings forecasts, we focus on tech before expanding to the region in aggregate. The evidence supports a stronger for longer view on the typically deeply cyclical memory sector, together with potential for a more moderate downswing when the cycle does turn. Combining this with our modelling for other regional sectors, **we expect regional earnings to increase 25% in 2027 and 14% 2028 after +75% in 2026 and raise our 10yr trend annual earnings growth to 10% from 9%.** Within this, growth is likely to vary meaningfully, underscoring the theme of differentiation.

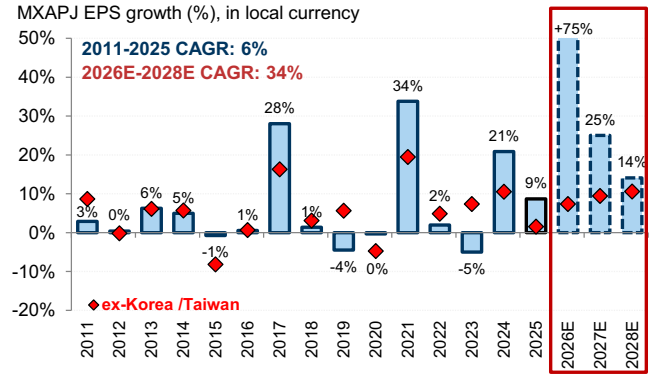

A tech-driven earnings resurgence

Asia went through a 15-year period of sub-par earnings delivery from 2011-2025. We examined why this occurred in The Asian earnings enigma and Asian earnings: where to find growth and framed a case for a recovery in earnings to low double-digit trend growth based on largely on shifts in index composition and adaptations to technology change. Earnings growth is now proving to be much stronger than we expected: **the region is apt to deliver a 34% earnings CAGR from 2026-2028** after producing just 6% compound annual growth during the previous decade and a half. This recovery in earnings has driven the region's improved index returns, demonstrating the central role profits play in equity performance.

The resurgence in earnings has been driven largely by the technology hardware supply chain, which is benefiting from a boom in AI-related capex propelled by the rapid improvement in and diffusion of artificial intelligence. **The information technology & semiconductor sector now accounts for 47% of estimated full-year 2026 regional earnings** and this may further increase in 2027. Given the importance of info tech, we focus on earnings prospects for this sector specifically in the analysis that follows. The bottom line is **we expect the info tech sector to grow at a 20% CAGR over 2027-2031 in our base case**, following +260% growth in 2026 and at the 60th percentile of historical 5-year earnings growth outcomes over the past 20 years. In turn, this leads us to **revise our aggregate 10-year MXAPJ index earnings forecast to 10%,** 1pp above the 9% trend growth we estimated last year.

Key debates regarding the information technology sector's earnings outlook

Info tech accounts for 47% of 2026E regional earnings and memory is likely to comprise 70% of this profit pool, up from 36% in 2025. This raises the concern that memory producers are 'over earning' and that their current high level of profitability (margins, ROE) is unsustainable in light of the historical deep cyclicality of the industry. To address this, we examine demand and supply issues and conclude (as per our sector analysts) that the memory cycle is apt to last longer and be stronger than it previously has. Moreover, when the downswing occurs, it may be less pronounced than in the past. This is effectively a constructive 'middle ground' view between the polarities of 'no cycle' (which appears unrealistic for a capital-intensive industry) and 'reversion to typical cycle' (which dismisses compelling evidence to the contrary).

Demand-side issues

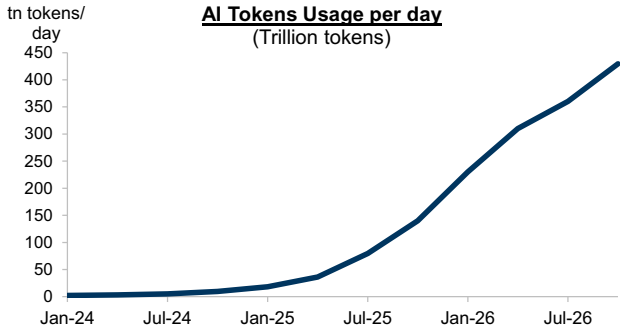

- **Demand for 'compute'** (processing power needed to process digital workloads) **is growing rapidly and for a sustained period**, driven notably by the shift from inference AI to the agentic AI economy. Our global semiconductor team expects global token usage to increase 24x from 2026-2030 to 120 quadrillion/month. The Tokens Per Day index estimates current usage at roughly 430 tr/day, around 2x

greater than 230 tr/day at the start of this year and tracking towards our longer-term forecast.

- **Hyperscaler capex continues to scale to satisfy compute demand.** Our analysts expect investment during 2026-2028 to be $829bn (+86%), $1,249bn (+51%), and $1,406bn (+13%), with total spending from 2026-2030 to be over $6tr. This is the key demand driver for the Asian upstream hard technology supply chain, including memory, foundry, AI compute & systems, and packaging & interconnect.
- **Hyperscaler return on investment**. Given the centrality of hyperscaler investment to the outlook for the Asian technology sector, investors question whether hyperscalers will earn a sufficient return on invested capital (ROIC) to justify continued and increasing capex. In Sizing the AI Economy Needed to Justify ROIC on Hyperscaler AI Capex, our sector analysts argue that although the hyperscalers' 2026–27 AI investments will weigh on near-term returns, they could achieve a 15% ROIC if they generate approximately $1.42 trillion of cumulative revenue in 2028–30. Current cloud backlogs and demand signals suggest that this target is achievable.
- **Hyperscaler financing**: Market concerns also focus on hyperscaler free cash flow turning negative in late 2026-2027 and whether sufficient financing will be available to fund their planned capex. Our credit strategists expect debt funding to rise from 33% of hyperscaler capex this year (about $250bn across global IG debt markets) to a peak of 35% in 2027 and then moderate to 25% in 2030 as monetization of AI investments improves cash flow from operations. Funding constraints are therefore unlikely to impede hyperscaler capacity build.

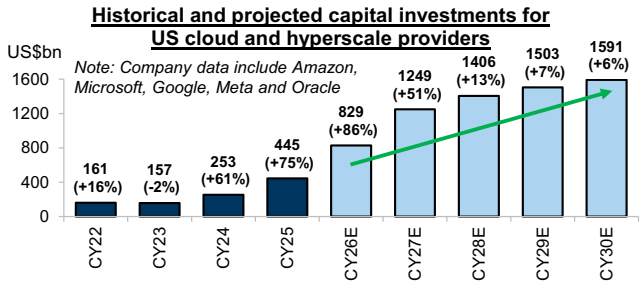

In sum, demand for compute is growing at unprecedented rates, hyperscalers are investing to meet this demand which is the key driver for the upstream Asian tech hardware supply chain, and the available evidence indicates that the hyperscaler buildout will be financeable and meet required investment return thresholds.

Exhibit 17: Daily tokens processed globally have reached 430tr and are tracking towards our longer-term forecast of 24x increase from 2026-2030 driven by consumer and enterprise agents

Source: tokensperday.com

Exhibit 18: Hyperscaler capex is apt to increase to 2030 with total spend exceeding $6tr from 2026-2030

Source: FactSet, Goldman Sachs Global Investment Research

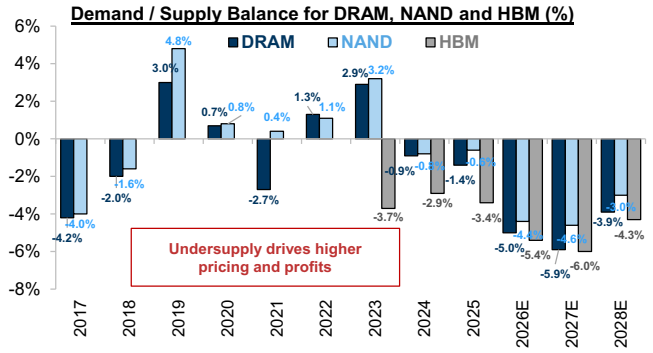

Supply-side issues

- **Record and persistent supply shortfall**. Our semiconductor analysts expect record global DRAM and NAND undersupply in 2026 and a further new record shortfall in 2027, with continuing (albeit narrower) undersupply in 2028 extending into 2029-2030 (although our semiconductor analysts do not have formal estimates yet for these outyears).
- **Longest and deepest memory undersupply drives pricing power and profitability.** Customers' willingness to sign 3- to 5-year long-term agreements (LTAs) and even more stringent strategic customer agreements (SCAs) signals their expectation of tight supply for an extended period, driving sustained favorable pricing for memory manufacturers. Coupled with high operating leverage, this dynamic is delivering unprecedented levels of profitability.
- **Faster supply response unlikely**. Assuming continuing rapid demand for compute, the principal risk to the memory sector's high level of profitability is a more rapid supply response than is currently forecast. This is unlikely for several reasons. First, **supply chain bottlenecks** upstream of memory fabs are constraining the elasticity of memory supply. These include shortages and extended lead times for clean rooms, semiconductor equipment, and advanced packaging equipment (notably for high bandwidth memory). Our semi analysts expect the DRAM capacity CAGR for 2026-2030 for the three leading memory manufacturers (SEC, Hynix, Micron) to be 4-5pp slower than during the 2017-2018 upcycle (7-8% vs. 12%). Second, **LTAs and SCAs** are reaching 50-70% of planned production capacity and give memory manufacturers longer term demand visibility, enabling them to better calibrate capacity expansion thereby reducing the risk of oversupply. Third, **HBM production** reduces conventional DRAM capacity because a wafer allocated to HBM subtracts capacity to make about 3 wafers of conventional DRAM. As the share of HBM rises, it acts as an added constraint on DRAM supply (our analysts expect HBM to reach about 20% of total DRAM revenue by 2028).
- **Chinese capacity addition**. Investors express concern that the rapid increase in ChangXin Memory Technologies' (CXMT) production capacity could disrupt the favorable industry dynamics for global DRAM makers in a similar manner to how Chinese capacity expansion depressed global prices and eroded profit margins in solar panels, lithium-ion batteries, electric vehicles, and steel. This appears unlikely, at least for the next several years. First, our analysts expect the China DRAM and HBM markets to grow at 50% and 188% CAGRs from 2026-2028 and for CXMT to cover only 50% and 40% of China's DRAM and HBM demand. This indicates low risk of excess capacity spillover to global markets. Second, there is a 2-3 generation technological gap between CXMT and the leading DRAM manufacturers. This gap is unlikely to narrow soon considering restrictions on procuring WFE (including EUV equipment) and typically 2-3 years for process node migration. Last, CXMT accounts for about 10% of total capex and revenue globally and these ratios are unlikely to shift meaningfully, indicating limited share gains in the next few years.

In sum, the memory supply shortfall is likely to persist potentially to 2030 with low risk of a more rapid increase in capacity beyond current projections. This supports

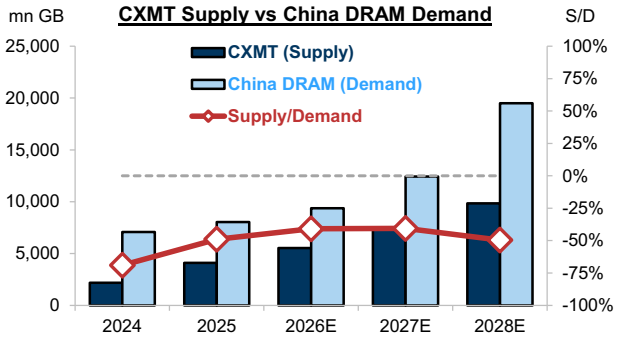

expectations of elevated memory (and related) industry profitability along with a more moderate downshift when demand/supply balances start to normalize.

Exhibit 19: Record memory undersupply is likely to intensify further in 2027 and remain well short of demand in 2028 and likely in 2029-30 as well

Source: Goldman Sachs Global Investment Research, Company Data

Exhibit 20: CXMT supply will cover only 50% of China DRAM demand by 2028, which reduces concerns that Chinese capacity additions will disrupt favorable global demand/supply balances

Source: Company data, Goldman Sachs Global Investment Research

Framing tech sector earnings growth expectations

To widen our aperture from semiconductor memory to the information technology sector as a whole, we consolidate the 11 principal subgroups into five broader categories and assess earnings growth prospects over the coming 5-year 2027-31 period. We build our base case on our analysts' estimates and industry insights summarized above, and frame optimistic and cautious scenarios using a market-based approach of current high and low consensus estimates. Beyond 2028, we assume earnings growth gradually normalizes toward historical cycle (20-yr) averages, converging to 18% growth by 2032.

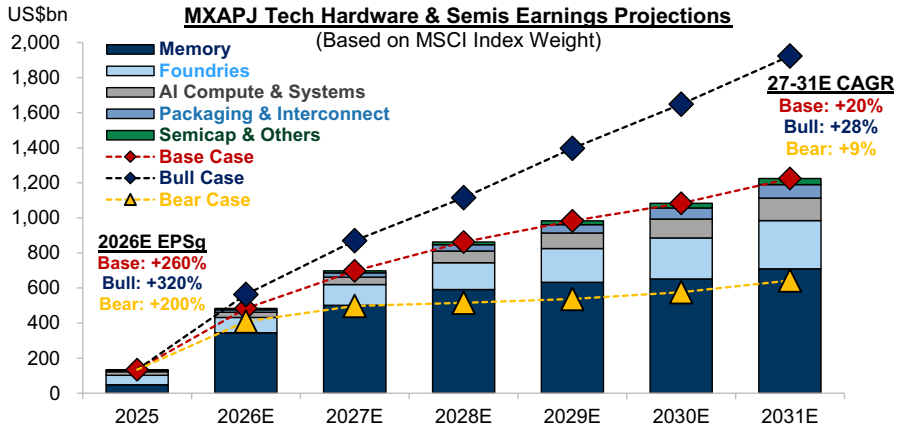

Based on these assumptions, in our base case we project MXAPJ tech-sector earnings to grow at a 20% CAGR over 2027-31 from +260% in 2026, equivalent to roughly the 60th percentile of historical five-year earnings growth outcomes over the past two decades. The bull case implies 28% CAGR (85th percentile), while the bear case implies only 9% CAGR (18th percentile), primarily driven by a sharp downturn in memory earnings.

Exhibit 21: Consensus expectations for the Asia ex-Japan information technology sector call for 41% growth in 2027 and 15% in 2028 after a 260% increase in 2026

EPS Growth (%)	MXAPJ Tech			Past 20Y (2006-25)			2026E Consensus/GS				2027E Consensus/GS				2028E Consensus/GS

Refreshing our 10-year earnings growth forecasts

Building on our tech sector analysis, we refresh our long-term 10-year earnings growth forecasts we first introduced in our global strategy paper last year. To do so, we update our forecasts for 2026-2028 (years 0-2) and then model 2029-2036 (years 3-10) based on the historical relationship between earnings growth and GDP growth, while assuming that growth and margins gradually normalize toward long-term levels. We also explicitly model the year 3-4 transition for Taiwan and Korea to reflect our constructive views on AI-related fundamentals. For Taiwan, this incorporates our outlook on AI capex and industry supply-demand dynamics, which we believe will support above-cycle earnings growth. For Korea, we assume earnings growth moderates from an elevated base and margin level but remains positive rather than turning negative.

We apply further adjustments to long-term EPS growth to capture structural factors not fully reflected in GDP forecasts:

- AI adoption: We assume 20% of the estimated 2.1% annual productivity gain from AI is realized, recognizing that some benefits are already embedded in GDP forecasts. The impact varies by market based on our previous research.
- AI capex cycle: Provides additional support to markets with meaningful exposure to the AI supply chain, particularly Taiwan, Korea, China, and Japan.
- Reform and policy initiatives:
  - China: "Going Global", anti-involution measures, AI and strategic investment initiatives, among others.
  - Korea: Policy-driven improvements in corporate governance and ROE.
  - Singapore: Additional moderate reform-related benefits.

The bottom line is we expect regional earnings to grow 25% and 14% in 2027 and 2028 after an outsized 75% increase in 2026. For the next 10 years, we project 10% earnings CAGR, 1pp above our previous 9% expectation. If the AI cycle proves stronger or weaker than our base case, annual earnings growth could be 2pp higher or lower at 12% or 8%. The growth outlook varies by market and will be impacted by

variance in technology exposure, different macro sensitivities, and idiosyncratic policy measures, underscoring the theme of differentiation within the region.

Exhibit 23: We expect MXAPJ earnings to grow 25% in 2027 and 14% in 2028 after 75% in 2026, in line with consensus but with meaningful variation by market

Note (1): Bull Case (Stronger AI Cycle): Assumes the AI capex cycle accelerates and remains strong for longer, extending the strong earnings cycle through 2028-29. Earnings growth gradually normalizes thereafter as the cycle matures.
Note (2): Bear Case (Weaker AI Cycle): Assumes the incremental earnings boost from the AI capex cycle peaks earlier and begins to normalize in 2H27. Oversupply emerges in early 2028, resulting in more rapid earnings normalization during 2028-29.
Note (3): GS (old) estimates are as of November 2025; since then, MXAPJ 2026/27 EPS has been revised upward by 46%/65%.

Valuation: Separating tech from non-tech

The information technology sector is now the dominant contributor to regional earnings following exceptional growth and profitability. This raises questions of how to value tech, whether the market has overpaid for the earnings boom, and what the appropriate methodology for assessing regional valuation should be. Similar to our approach to earnings, we find a strong case for **assessing tech and non-tech valuations separately** and then combining them to arrive at a composite regional view. We use a DDM approach to value tech as this takes current super-normal profits into explicit account and apply our top-down macro modeling to the non-tech part of the region. **The bottom line is we find the market is underpricing both tech and non-tech and estimate 16% valuation upside for hard tech, 3% for non-tech, and 10% for the MXAPJ regional index as whole (from 10.3x to 11.3x on a 12m forward basis).**

Has the market overpaid for strong tech earnings?

As an initial check on whether market performance has exceeded tech sector profit delivery, we find that market capitalization of the regional tech hardware & semiconductor sector has moved roughly in line with delivered earnings. On this metric, recent strong tech share price performance reflects underlying profit growth rather than undue optimism over AI.

Exhibit 25: Asian regional tech sector increases in market cap track underlying profit delivery

Source: FactSet, Bloomberg, MSCI, Goldman Sachs Global Investment Research

The case for separating tech from non-tech when valuing regional equities

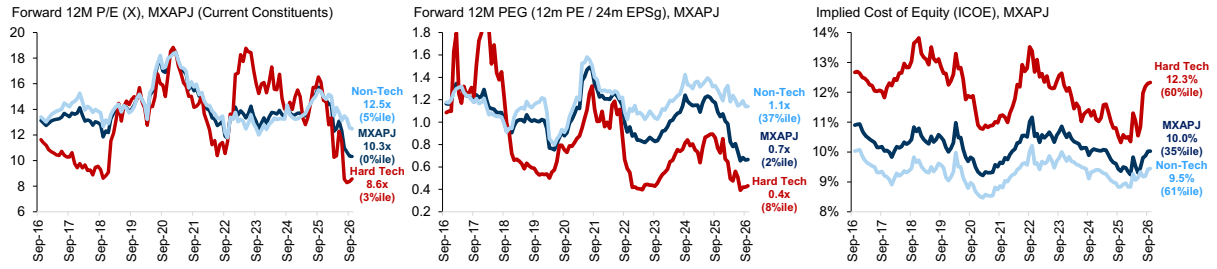

Valuation metrics for tech appear low relative to historical ranges and differ materially from non-tech. This includes 12m forward P/E (8.6x, 3rd %ile of 10yr range), price/earnings to growth (0.4x, 8th %ile), and the DDM-based implied cost of equity which assumes excess profitability fades over time (12.3%, 60th %ile; note that higher is more attractive). In contrast, non-tech trades at higher valuations in absolute terms and relative to range, and the gap between these two segments has recently widened.

Furthermore, we note that our top-down macro valuation model, which has worked well for more than a decade, is no longer functioning effectively. The MXAPJ index P/E is well below the model's fitted value, likely reflecting a deep discount to near-term supernormal tech earnings. In contrast, if we strip tech out, our macro model continues to function well and suggests the non-tech forward P/E could recover modestly over the

next 12 months given expectations of an improving Asian FX and flow backdrop, long rates moderating from current elevated levels, and a more normalized growth environment.

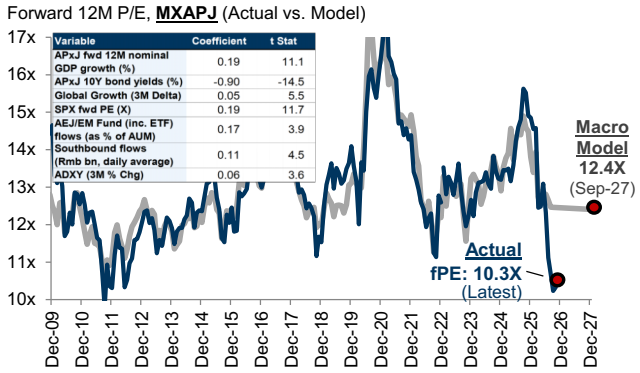

These insights argue convincingly for evaluating tech and non-tech separately and then combining them into an aggregate regional valuation.

Exhibit 26: The tech sector trades meaningfully below the non-tech sector along P/E, PEG, and DDM-based metrics in absolute terms and relative to historical ranges, supporting the case for assessing tech and non-tech valuations separately

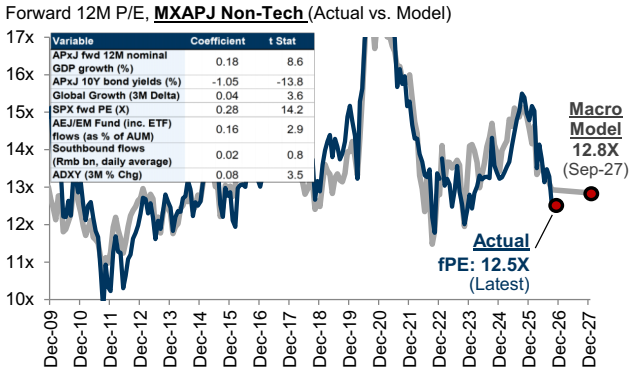

Source: FactSet, MSCI, Goldman Sachs Global Investment Research

Exhibit 27: MXAPJ P/E is well below our macro model's fitted value, likely reflecting a deep market discount on near-term supernormal tech earnings

Source: FactSet, Bloomberg, MSCI, Goldman Sachs Global Investment Research

Exhibit 28: In contrast, our macro P/E model continues to work well for the non-tech sector and projects a moderate recovery from 12.5x to 12.8x over the next 12 months

Source: FactSet, Bloomberg, MSCI, Goldman Sachs Global Investment Research

A DDM approach to valuing tech

The challenge with applying customary valuation metrics to tech is they can be distorted by the sector's current high level of profitability. A dividend discount approach which explicitly models reversion to more normalized profitability is more robust.

In Exhibit 29, we evaluate what the market is currently pricing for the regional technology sector in terms of its medium-term ROE and the equity risk premium. Given current 47% ROE and expected 40% earnings CAGR over the next 2 years, the market is pricing a sharp fade in ROE to a 20-26% range equivalent to the 10- to 3-year average levels, depending on cost of equity assumptions. The overarching insight is the longer the AI-driven ROE premium can be sustained at a given cost of equity, the greater the valuation upside for tech, assuming other factors remain unchanged.

Based on this framework, **we estimate 16% valuation upside to the tech sector**, equivalent to the forward 12-month P/E expanding from 8.6x to 10.0x. This is driven by assumptions that medium-term ROE moderates only to 26% (3yr average) by Year 4 in

环球研报直通车 一手研报库 订阅报告-微信：waiziyanbao

our DDM from the current 47%, and that the market-priced cost of equity reverts to its 5-year average level (11.7% COE, or 6.7% ERP at the current ~5% risk-free rate). These numbers are, of course, open to debate, but they do make explicit the underlying longer-term earnings and profitability trajectory along with the cost of capital which simple P/E or P/B metrics do not.

Combining this with our top-down modeling of non-tech, **we estimate the MXAPJ index forward P/E could rise from 10.3x to 11.3x, implying 10% upside**.

Exhibit 29: Our DDM model indicates the market is pricing a sharp reversion in tech sector profitability from current elevated levels; the longer the AI-driven ROE premium can be sustained, at a given cost of equity, the greater the valuation upside

Potential chg in MXAPJ Hard Tech's fair-value valuations under different ERP & ROE assumptions in a DDM model

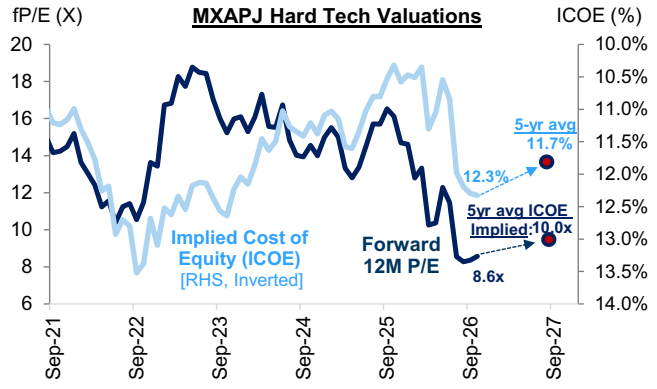

(Equity Risk Premium Scenario) Assuming risk free rate = 5.0%	Equity Risk Premium (ERP) Assumptions	Potential chg in fair-value valuation under a DDM model	MXAPJ Hard Tech Medium-Term ROE Assumptions (Current Fwd ROE: 47%; Next 12/24M EPS Growth: 40% CAGR)					
			(20yr avg) ROE: 18%	(10yr avg) ROE: 20%	(5yr avg) ROE: 22%	(3yr avg) ROE: 26%	ROE: 34%	(Current Level) ROE: 47%
5-Yr Maximum ICOE		8.5%	-47%	-40%	-34%	-23%	0%	39%
		7.9%	-41%	-33%	-25%	-13%	13%	59%

5-Yr Average ICOE		6.7%	-22%	-11%	0%	16%	52%	114%
3-Yr Average ICOE		6.3%	-12%	0%	12%	31%	71%	140%
		5.8%	0%	14%	28%	50%	96%	176%
1-Yr Minimum ICOE		5.4%	16%	33%	49%	74%	128%	222%

(Current Market Priced / Implied Assumptions)

Note: Our implied IERP/ICOE model is based on a multi-stage dividend discount model (DDM), assuming: (1) short-term EPS growth (next 1-2 years) equals consensus estimates; (2) medium-term ROE (Year 4) reverts to the average ROE over the past three years; (3) medium-term growth (Years 4-7) is based on realized and forecast real GDP growth over the next seven years; and (4) terminal growth converges to long-term nominal macro earnings growth of ~4.5%. We use the UST10Y yield as the risk-free rate assumption for the USD-denominated MSCI APxJ Index.

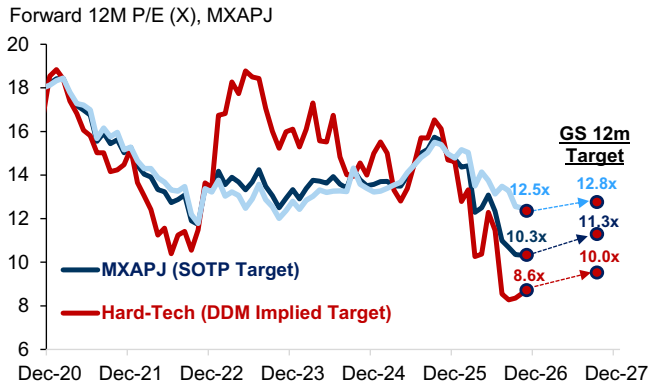

Source: FactSet, MSCI, Goldman Sachs Global Investment Research

Exhibit 30: We estimate close to 16% upside valuation for the regional tech sector, assuming medium-term ROE fades to the 3-year average of 26% from the current 47% and the cost of equity reverts to its 5-year average level

Source: FactSet, MSCI, Goldman Sachs Global Investment Research

Exhibit 31: Combining tech DDM-based valuation with non-tech macro modeling, MXAPJ forward P/E could rise 10% to 11.3x

Source: FactSet, MSCI, Goldman Sachs Global Investment Research

Implementation: Constructive outlook, North Asia tech focus, thematic emphasis

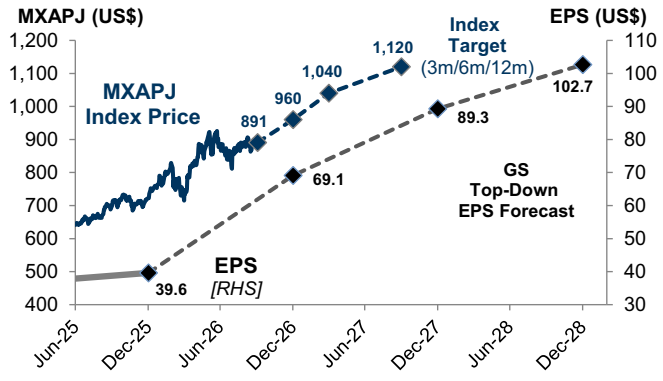

We maintain a constructive view on Asian equities and anticipate attractive returns both for the coming 12 months and on an average annual basis over the next decade. In keeping with the overriding theme of differentiation, we focus on tech-driven earnings, which are the strongest fundamental factor and in turn lead to a north Asia market focus. We would add selective diversification away from AI to balance risk and broaden factor exposure. This includes the themes of defense, power, HALO (heavy asset/low obsolescence), and improving shareholder returns. Last, we feature screens of GS buy-rated AI stocks, non-AI GARP names, and stocks with high shareholder yields.

Attractive near and longer-term potential return

We maintain our MXAPJ 12m index target of 1120, which implies +26% USD price returns, propelled by Korea and Taiwan (+11% ex-these markets). Earnings growth of 25% in 2027 and 14% in 2028 is the principal driver of returns, with moderate valuation recovery from current suppressed levels as previously discussed.

We also refresh our 10-year annualized return forecasts and raise our USD total return to 13.6%, 1pp above our previous forecast and driven by higher earnings growth (10% vs 9%). This is at the upper end of the historical 10-year range (89th %ile) and is supported by strong earnings fundamentals following an extended period of substandard profit growth which in turn led to low annual returns.

Exhibit 32: Our 1,120 12-month MXAPJ target implies a 26% USD price return, driven by continuing strong earnings growth

Source: FactSet, MSCI, Goldman Sachs Global Investment Research

Exhibit 33: Our 10-year annualized total returns for Asian equity markets are towards the high end of their historical distribution, driven by AI benefits and corporate reform

North Asia tech focus with selective broadening

Our market and sector allocations are driven significantly by expected earnings growth, which leads to a tech focus and overweights on the north Asian markets of Korea, Taiwan, Japan, and China A shares where tech sector weightings are highest. As we noted in the first section and our emerging market strategists examine in Concentration Conundrum, the top 6 tech stocks account for 36% of MXAPJ index cap, which leads to concentration risk. Accordingly, we also recommend selective broadening away from tech and note the appeal of non-AI opportunities with high earnings visibility and lower volatility. Singapore is a good example: it is the 4th best performing regional market this year (+19%) after Korea, Taiwan, and Japan, with a beta of just 0.64 to the MXAP index and trailing 30d annualized volatility of just 11%.

Exhibit 35: We remain overweight North Asia and underweight Australia and much of ASEAN

Thematic focus to generate alpha

The wide disparity in year-to-date market and sector performance underscores the theme of differentiation. The spread between the best and worst markets is 143% (Korea +101%, Indonesia -42%) and between the best and worst sectors is 114% (info tech +89%, communication services -25%). In addition to active views on markets and sectors, alpha can also be generated through thematic focus. Beyond the dominant AI topic, we also favor power demand, defense, HALO, US reindustrialization, specific China policy-driven opportunities (e.g. 15th 5-year plan beneficiaries), and improving corporate governance (proxied by rising shareholder returns).

Exhibit 37: Recent pullbacks offer better entry points for our top regional themes

Source: FactSet, MSCI, Goldman Sachs Global Investment Research

Stock screens

We feature 3 stock screens of GS Buy-rated stocks to complement the concepts discussed with specific investment ideas. First, the dominant theme of **AI**. The median 2026-27 earnings CAGR for this list is 58% and it trades at 24x 2027 P/E and a 0.7 PEG ratio. Second, **non-tech stocks** to add diversification away from AI. The median 2026-27 earnings CAGR for this set is 21%, and the list trades at 12x 2027E P/E and a 0.9 PEG ratio. Last, **strong shareholder returns** to add a lower beta, income-focused dimension. This list offers a 4% dividend yield and 2% buy-back yield for a 6% total shareholder yield and trades at 11x 2027E P/E.

Disclosures

MSCI disclosure

All MSCI data used in this report is the exclusive property of MSCI, Inc. (MSCI). Without prior written permission of MSCI, this information and any other MSCI intellectual property may not be reproduced or disseminated in any form and may not be used to create any financial instruments or products or any indices. This information is provided on an "as is" basis, and the user of this information assumes the entire risk of any use made of this information. Neither MSCI, any of its affiliates nor any third party involved in, or related to, computing or compiling the data makes any express or implied warranties or representations with respect to this information (or the results to be obtained by the use thereof), and MSCI, its affiliates and any such third party hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of this information. Without limiting any of the foregoing, in no event shall MSCI, any of its affiliates or any third party involved in, or related to, computing or compiling the data have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages. MSCI and the MSCI indexes are service marks of MSCI and its affiliates. The Global Industry Classification Standard (GICS) was developed by and is the exclusive property of MSCI and Standard & Poor's. GICS is a service mark of MSCI and S&P and has been licensed for use by The Goldman Sachs Group, Inc.

Basket disclosure

The ability to trade the basket(s) in this report will depend upon market conditions, including liquidity and borrow constraints at the time of trade.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; registered market maker. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with a subject company, public appearances and trading in securities covered by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Brazil:** Disclosure information in relation to CVM Resolution n. 20 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 10th Floor, Ascent-Worli, Sudam Kalu Ahire Marg, Worli, Mumbai-400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. Registration granted by SEBI and certification from NISM in no way guarantee performance of the intermediary or

provide any assurance of returns to investors. Goldman Sachs (India) Securities Private Limited compliance officer and investor grievance contact details, a copy of the annual compliance audit report and other relevant information and disclosures can be found at this link: https://www.goldmansachs.com/worldwide/india/research-analyst. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, and Investment Management Association of Japan. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Global product; distributing entities

Goldman Sachs Global Investment Research produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. Available Weekdays (except holidays), from 9am to 6pm. Canal de Comunicação com o Público Goldman Sachs Brasil: 0800 727 5764 e/ou contatogoldmanbrasil@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom.

Goldman Sachs International ("GSI"), authorised by the Prudential Regulation Authority ("PRA") and regulated by the Financial Conduct Authority ("FCA") and the PRA, has approved this research in connection with its distribution in the United Kingdom.

European Economic Area: Goldman Sachs Bank Europe SE ("GSBE") is a credit institution incorporated in Germany and, within the Single Supervisory Mechanism, subject to direct prudential supervision by the European Central Bank and in other respects supervised by German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) and Deutsche Bundesbank and disseminates research within the European Economic Area.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, make a market or act as liquidity provider in, and buy or sell, any securities, derivatives, or other financial instruments referred to in this research (including any financial instruments issued by the companies referred to herein), unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is focused on investment themes across markets, industries and sectors. It does not attempt to distinguish between the prospects or performance of, or provide analysis of, individual companies within any industry or sector we describe.

Any trading recommendation in this research relating to an equity or credit security or securities within an industry or sector is reflective of the investment theme being discussed and is not a recommendation of any such security in isolation.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and https://www.goldmansachs.com/disclosures/cftc_fcm_disclosures. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

Disclosure information is also available at https://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.
