KL & Johor DC Tour takeaways: Bottlenecks reshape the build-out

Our recent DC tour strengthened our conviction that Malaysia's build-out is a durable, multi-year domestic capex cycle, rather than speculative. Rising utilization validates underlying demand, while tighter approvals improve pipeline quality by requiring operators to deliver local economic value. More importantly, **we identified three new findings: (1)** self-generation is emerging as a solution to grid constraints, creating a new pool of private power capex; **(2)** DC density is rising to ~1.5MW/acre from ~1MW/acre, easing land and siting constraints per MW; and **(3)** 25-35% RE requirements are creating structural demand for solar and storage. With generation resources adequate, the key bottlenecks are grid access and water infrastructure funding, where both are increasingly shifting investment towards the private sector. In Malaysia, we prefer TNB, YTLP, SCGB, and GAM.

- **DC demand is real and the tighter gate is a positive.** Inquiries now exceed RM100bn (~3GW, assuming a minimum 100MW per project), with Johor alone at 62 approved DCs (~7GW). More importantly, Johor's ~1.5GW live capacity is ~70% utilised, up from ~50% a year ago, providing a stronger read-through on real demand than the headline pipeline. Penalties and clawbacks for under-use further improve our confidence in the conversion from approvals to actual load. With DCTF's (Data Center Task Force) more stringent requirements, this should weed out speculative projects without constraining genuine demand. As Johor faces tighter power and land availability, AI-training workloads are increasingly spilling into Selangor and vicinity, where greater grid and land headroom remains. New local workforce, sourcing and self-generation requirements should also channel more DC capex into the domestic ecosystem.
- **The opportunity is shifting from generation to access and Renewable Energy (RE).** Malaysia has sufficient generation capacity to support the approved DC pipeline, with further supply being added. The constraint is increasingly grid connection timing, which should drive greater adoption of self-generation and allow uncommitted projects to accelerate while shifting part of the power investment to operators. Beyond grid access, the 25–35% RE requirement creates a structural second wave of DC-related capex. We estimate up to RM60bn (US\$15bn) of CRESS-related opportunities, with demand becoming more visible as projects move from construction to energisation.
- **The bottleneck is water infrastructure, creating a new capex pool.** Malaysia has sufficient raw-water resources, but lacks the funded infrastructure to deliver supply where DCs need it. Malaysia Water Association (MWA) flagged funding constraints, while a MNC hyperscaler identified aging pipes as Johor's key issue. The gap is significant with ~34% NRW, a ~39,000km AC-pipe replacement backlog, only ~1,000km funded over five years, and tariffs below long-run cost until at least the 2028 review. Rapid DC growth adds urgency, with Johor and Selangor reserve margins already at ~16% and ~12%; a two-year WTP delay could reduce these to ~4% / <1%. Private capital is increasingly stepping in through operator-funded NRW works, alternative state financing and DC self-provisioning, while premium tariffs of ~RM5.33/m³ improve economics. This is creating a new, multi-year private-sector water capex pool.

DC landscape: Sizeable with more criteria

The pipeline is sizeable, but actual usage gives us greater conviction. DC inquiries now exceed RM100bn (~3GW, min. 100MW each), with Johor alone having 62 approved DC projects (~7GW). More importantly, utilisation on Johor's ~1.5GW of live capacity has risen to ~70%, from ~50% a year ago, giving us a better read-through on actual demand than the headline pipeline. MIDA tracks under-use with penalties and clawback — a useful reality check that increasingly separates genuine projects from speculative allocations. This gives us greater confidence that the approved pipeline will translate into actual DC construction and sustained electricity consumption.

DCTF and ranked approval criteria. The approval regime has shifted from a relatively loose process to a coordinated two-tier framework involving the DCTF and state authorities. The key criteria, ranked by importance, are:

1. **Confirmed off-taker** — a verified final end-user, typically LOI-backed, with no speculative projects.
2. **Secured power commitment** — the key bottleneck for anything uncommitted.
3. **Secured water commitment** — with Tier 3/4 projects requiring waterless or alternative cooling solutions.
4. **Local sourcing programme** — required to qualify for incentives such as the 10-year tax incentives.
5. **RE sourcing / self-generation plan** — targeting 25–35% renewables.

We therefore see the tighter gate as a positive demand filter rather than a restriction on the cycle. Once applicants meet the requirements, government approval can take ~28 days to three months; delays are more often driven by applicant readiness, particularly securing internal off-taker approvals and infrastructure commitments. In other words, the bottleneck is increasingly project readiness, not government appetite for DCs.

Johor still the hub, but spillover to Selangor and vicinity. Johor retains its structural advantages from Singapore and submarine-cable connectivity, but tightening power and land availability is increasingly pushing new builds outward. Johor has already turned into a net power importer as DC demand ramps, while Gamuda sees competition for development sites intensifying as clients increasingly turn elsewhere. We therefore expect the next wave of growth to be more geographically diversified. AI-training capacity should drive much of the spillover, given its lower latency sensitivity, while latency-sensitive colo should remain concentrated in Johor. Selangor/Cyberjaya and its vicinity stand out as the key beneficiaries, offering greater land and grid headroom. Our proprietary 13GW DC tracker supports this shift: Johor currently accounts for ~70% of live DC capacity, but we expect its share to gradually decline towards ~65% as new capacity is increasingly developed outside the state.

Policy is shifting DCs from resource consumers to economic contributors. New approval conditions require operators to contribute through local sourcing, workforce development and infrastructure investment. 80% of workers must be local, including 25% in managerial, technical or supervisory roles, while Supermicro and Delta are localising server-rack and component production, supporting a broader ecosystem of manufacturers and construction SMEs. Self-generation adds another layer, shifting infrastructure investment onto the operators themselves and potentially allowing new, uncommitted projects to accelerate approvals by bringing their own power. We view

these requirements as supportive of domestic DC enablers as more of the DC capex and associated economic value is captured locally.

Figure 1: Our DC tracker hits 13GW, with ~3.5GW live/under construction, ~4GW committed and ~5GW early-stage

Capacity in MW

Source: The Edge, Data Centre Dynamics, J.P. Morgan estimates. Under Construction: Capacity currently under build, with M&E installation in progress. Committed: High-conviction pipeline capacity, with required elements largely secured (i.e., land, power, etc.). Early-stage: Announced/speculative pipeline capacity, with all required elements yet to be secured.

Electricity: Enough at the system level; new DCs must bring their own

Electricity is not the constraint the market fears; grid access is. Our DC tour reinforced our view that Malaysia has sufficient generation capacity to support the approved DC pipeline, with new supply already being lined up. System reserve margins are expected to remain above 25%, rising from ~28% in 2025 to ~31% by 2031 even after absorbing ~6GW of DC load. MIDA also pointed to incoming generation capacity alongside Johor's ~7GW approved pipeline. The implication is clear: the issue is not whether Malaysia can generate enough electricity, but whether it can deliver it to the right site at the right time.

Self-generation could provide an alternative route, allowing operators to source power without waiting for conventional connections, while potentially accelerating approvals for new uncommitted projects from DCTF. This was one of the more important takeaways from the tour and was not fully captured in our original thesis: operators are increasingly being pushed to solve their own power requirements. In our view, this not only improves conversion potential for the sizeable DC pipeline, but also creates a new pool of private-sector power capex. Importantly, we believe integrated players with existing power and water capabilities will be front-runners, given their ability to offer end-to-end solutions. We see GAM and YTLP as the best positioned to capture this opportunity.

The RE mandate is becoming the next DC investment wave. Another new finding was that new DCs must source 25–35% of their power from renewables, creating a structural demand pool for Malaysia's RE build-out. As projects move from construction towards energisation, we expect the next focus to be power procurement and RE compliance, driving a new wave of CRESS-related announcements. CRESS is the near-term workhorse, allowing DCs to contract renewable power through the grid without owning generation. Gamuda can offer an integrated power, water and renewables solution. We see rising RE requirements translating into a growing contracted pipeline rather than a one-off compliance exercise, with Gamuda the key beneficiary.

Figure 4: Potential peak power demand from DC

Water: Enough in the ground; the DC bar and the funding gap are what bite

Water scarcity is not the issue; distribution infrastructure and funding are. Our tour reinforced that reservoir capacity is not the immediate bottleneck, with Malaysia Water Association's Secretary General highlighting funding as the key constraint and AirTrunk confirming that Johor's issue is aging distribution pipes rather than raw water availability.

Three pressure points will become more acute as DC load builds. **First**, water reserve margins are already thin at ~16% in Johor and ~12% in Selangor; a two-year WTP delay could reduce these to ~4% and <1%, respectively, leaving little room for execution slippage. **Second**, NRW remains high at ~34%, with ~39,000km of aging AC pipes but only ~1,000km funded for replacement over five years (~RM1.8bn), highlighting that effective water capacity is constrained by the network even where raw water is available. **Third**, tariffs remain below long-run cost, with the current true cost of water at ~RM2.20/m³ and the next review only in 2028. The takeaway is that Malaysia does not need to find more water first; it needs to fund and build the infrastructure to deliver it.

Private capital is increasingly the solution to Malaysia's water funding gap — and it has to be. Federal funding is insufficient to even address the ~39,000km AC-pipe backlog, with only ~1,000km funded over five years. DCs make the shortfall more urgent by bringing forward WTP, storage and reserve-margin investments that cannot wait for stretched government budgets. Funding models are already evolving, with operators self-funding metering and leak detection, while Selangor and Penang are using alternative financing to build plants outside the slower PAAB build-and-lease model. The government is also encouraging private capital into industrial water and NRW reduction. DCs further improve project economics through self-provisioned assets and premium tariffs (~RM5.33/m³).

Sustainability: From differentiation to permissioning — and now a timeline & cost variable

Sustainability is shifting from reporting to permissioning, because the binding constraints regulators and communities care about are now measurable: water intensity, power/RE sourcing, and local economic contribution. Our tour reinforced that operators are already optimizing for “approve-ability”, not just engineering outcomes. One of the MNC DCs we visited is a clear example: it has 100% ESG-linked debt, with any interest savings reinvested into local social impact funds, and it emphasised 98–99% local subcontractors and ecosystem-building credentials (via partnership with SMEs, universities, and local procurement). We read this as a practical response to tighter approval regimes that increasingly require visible local benefit alongside infrastructure commitments.

Water availability a swing factor behind headline efficiency. Malaysia’s incentive regime may define minimum PUE/WUE thresholds, but on the ground we saw a simple reality: PUE is increasingly a function of water access. Equinix’s JH1 is air-cooled because it does not have water supply and runs at ~1.4–1.5 PUE, while it targets lower numbers in the next phase with water cooling. Similarly, one of the MNC DCs we visited framed PUE as a water–power balancing act, highlighting that recycled/alternative water is as much a resilience and social acceptability concern as an operating choice. The takeaway is that bankable water strategies are increasingly becoming a gating requirement.

Land use and biodiversity are on the radar. The TNB solar site visit highlighted the land-use externalities that sit alongside DC growth and associated RE build-out. On the positive side, the site is running active biodiversity management on ex-palm land converted to solar, including tracking 28 species (three migratory) and implementing human–wildlife conflict measures. However, sustainability trade-offs are also operational: panel cleaning has moved to daily due to dust from nearby DC construction, while drainage upgrades and a perimeter dyke are being built to manage runoff and resilience risks. As RE requirements rise alongside DC build-out, the tour highlighted that these land-use and community-facing impacts extend beyond the DC fence line.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe). NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, <https://www.jpmorganmarkets.com>.

J.P. Morgan Equity Research Ratings Distribution, as of July 04, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	36%	12%
IB clients**	83%	80%	73%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	92%	87%

*Please note that the percentages may not add to 100% because of rounding.

**Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.

For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at <http://www.jpmorganmarkets.com>, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, <http://www.jpmorganmarkets.com>. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of <http://www.jpmorganmarkets.com> where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to [UK MIFID Research Unbundling exemption](#) for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Digital assets, which may also be referred to as virtual or crypto assets or crypto currencies (e.g. bitcoin), discussed in this research report are subject to a rapidly changing regulatory landscape. The application of relevant laws in respect of such assets may be unsettled, and the legality

of any digital asset investment may be unclear. Prior to making any investment decision regarding any digital asset, investors should seek their own legal advice and be aware of any legal considerations regarding the purchase, holding or selling of such an investment. For relevant regulatory advisories on digital assets, including bitcoin and ethereum, please see

<https://www.jpmorgan.com/disclosures/cryptoasset-disclosure>.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit <https://www.theocc.com/components/docs/riskstoc.pdf> for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless stated otherwise. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below in the legal entity disclosures, this material has been distributed by the legal entity responsible for production, or where more than one legal entity is listed under the analyst's name, the first legal entity will be responsible for distribution. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

This material must not be acted on or relied on by persons who are not UK relevant persons. Any investment or investment activity to which this material relates is only available to UK relevant persons and will be engaged in only with UK relevant persons. A description of J.P. Morgan EMEA’s policy for prevention and avoidance of conflicts of interest related to the production of Research can be found at the following link: [J.P. Morgan EMEA - Research Independence Policy](#).

U.S.: J.P. Morgan Securities LLC (“JPMS”) is a member of the NYSE, FINRA, SIPC, and the NFA. JPMorgan Chase Bank, N.A. is a member of the FDIC. Material published by non-U.S. affiliates is distributed in the U.S. by JPMS who accepts responsibility for its content.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst’s involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan’s current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of

risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.

Confidentiality and Security Notice: This transmission may contain information that is privileged, confidential, legally privileged, and/or exempt from disclosure under applicable law.
