## CoreWeave (CRWV) 2Q26: Credit where credit is due... until the credit is actually due

*CRWV reported on Tuesday night with a mild beat to revenue, a more meaningful beat on AOI (albeit on a small base), and some pretty positive operational signals. The company raised FY26 guidance given the strong demand environment, and the CRWV bulls are re-energized.*

**Credit where credit is due: this was the strongest print CRWV has delivered.** We've previously written about how this team has fallen down on execution, but in this quarter, they delivered. Backlog grew to ~\$129B (inclusive of the \$25B signed in early Q3), active power increased substantially (500MW added last quarter), contracted power is continuing apace (3.7GW), and the customer base is slowly broadening, with some minor decreases to average contract duration. We even like the Indonesia build plan.

**Is it enough to make us dream the neocloud dream? Unfortunately not.** While guidance went up on every line: revenue, AOI, exit ARR, active power... capex went up higher than all of them. Interest expense is ballooning to \$3.3B against \$7.4B of adj. EBITDA for 2026; cost of capital isn't falling fast enough for us to feel comfortable. In terms of revenue durability, strategically, yes, there are a few enterprise examples and perhaps some green shoots on managed inference + storage products, but they're all small, and, in our opinion, unlikely to make CRWV more competitive against hyperscalers.

**We're maintaining our Underperform on the long-term fundamentals of this company and have not changed our view that the growth trajectory could shift hard and fast.** We've already seen the customers threatening to become competitors ([Meta](#)), new entrants with huge scale + cost advantages ([SpaceX](#)), not to mention the ongoing questions of efficiency / profitability / circular financing across the industry. We are marginally more optimistic about CRWV's ability to meet its 2026 numbers after this quarter's demonstration (but they have to execute—it's not a given). However, we're still not fans of the model.

### Investment Implications

We are Underperform on CRWV with a price target of \$74. CRWV benefits from supply constraint in the data center market, which undoubtedly continues to exist today; however, as capacity eases, which we anticipate, this company will be among the first and hardest hit. We value the company on a 25.5x EV/EBIT basis (previously 28.4x).

## DETAILS

*CoreWeave reported a better-than-expected 2Q26 on several headline metrics, with revenue of \$2.58B (vs \$2.56B consensus and \$2.52 BERN), up 112% YoY and 24% sequentially, as the company continued converting previously contracted capacity into revenue-generating deployments. Revenue backlog increased to \$104B, up 46% YoY—not inclusive of >\$25B of net-new commitments signed early in 3Q. Importantly, management indicated that more than half of the reported backlog is now attached to contracts where delivery has commenced, with that proportion expected to exceed 2/3 by year-end. While we acknowledge that 2Q further validates CoreWeave's near-term demand visibility and deployment execution, our longer-term concerns remain unchanged, particularly around the durability of pricing, contract economics, and residual GPU values embedded in the company's long-term earnings power in a more challenging competitive environment.*

**The principal positive development was the beginning of the operating-leverage inflection that the company highlighted in 1Q.** Adjusted EBITDA rose to \$1.51B, up 101% YoY and approximately 30% sequentially, with EBITDA margin expanding to 59% from 56% in 1Q. Most notably, adjusted operating income increased to \$128M, or a 5% margin, from \$21M and a 0.5% margin in 1Q—above the company's prior \$30M–\$90M guidance range. Management attributed the improvement to a larger installed base, improving utilization, and better economics on newly signed customer contracts, which it said carry contribution margins 5–10 points above those added in recent quarters. CoreWeave also implemented roughly 25% price increases across SKUs in July, meaning the reported 2Q margin improvement preceded the benefit of those changes.

**CoreWeave added nearly 500 MW of active power during 2Q to finish the quarter at 1.5 GW.** Management raised its year-end active-power target to more than 1.85 GW from more than 1.7 GW previously. Contracted power reached 3.7 GW at quarter-end and approximately 4.2 GW as of the call, with another 1.5+ GW of potential power associated with powered land, site-expansion options, and executed LOIs. While these figures support the company's stated 8-GW active-power target by 2030, they also reinforce the scale of the execution challenge: converting power, land, equipment, networking, cooling, and financing into operating clusters without recreating the pre-revenue cost drag that pressured margins earlier in the year.

**Managed inference represents a potentially important expansion opportunity for CoreWeave,** allowing the company to monetize GPU capacity through token-based and shorter-duration consumption models rather than solely through long-term take-or-pay contracts. Management highlighted rapid initial traction, with booked managed-inference ARR growing from roughly \$1M at launch to more than \$100M in recent months, and targeting at least \$250M exiting 2026. The offering could be strategically useful in placing GPUs that roll off existing contracts and broadening CoreWeave's relevance with enterprise customers that may not be prepared to commit to traditional five-year capacity agreements. However, the business remains early, capacity constrained, and likely more operationally complex than the company's core contracted-cloud model; its ultimate margin profile, customer retention, utilization stability, and incremental capital requirements remain unproven.

**The capital intensity of the model remains substantial and, in our view, should remain a focal point for investors despite the improved operating results.** CapEx totaled \$9.4B in 2Q, above the high end of guidance, and construction in progress increased to \$11.9B from \$9.6B sequentially, suggesting another substantial wave of PP&E deployment early in 3Q. Management raised 2026 CapEx guidance to \$35B–\$39B from \$31B–\$35B, while 3Q CapEx is expected at \$11.5B–\$13.5B. GAAP net loss was \$626M, an improvement from the \$740M loss in 1Q but more than double the prior-year loss, as net interest expense rose to \$640M. The company raised roughly \$18B across debt, converts, and equity during 2Q and stated that it has secured more than \$32B of debt and equity capital to date; it also cited an almost 300-bp reduction in weighted-average debt cost over the past year. The improvement in financing terms is constructive, but the balance sheet is becoming increasingly consequential as both debt service and capital requirements ramp with deployment.

**Guidance was meaningfully stronger and should support upward revisions to near-term estimates.** CoreWeave guided 3Q revenue to \$3.45B–\$3.60B and adjusted operating income to \$200M–\$260M, implying continued sequential margin expansion and low-teens adjusted operating margin by 4Q. Full-year revenue guidance increased to \$12.4B–\$13.2B from \$12B–\$13B, while full-year adjusted operating income guidance increased to \$960M–\$1.15B. Management also lifted its 2026 exit annualized run-rate revenue target to \$18.5B–\$19.5B. The scaling of managed inference is an additional upside vector: booked ARR increased from roughly \$1M at launch to more than \$100M within several months, and management expects at least \$250M of managed-inference ARR exiting 2026.

## BERNSTEIN LONG VIEW

Our case hinges on our longer-term revenue expectations for CRWV, which are significantly lower than street expectations. In general, we question CRWV's ability to continue to sign large-scale hyperscale deals as data center supply becomes more

readily available (2028+) and are concerned that hyperscalers are likely to attempt head-on competition with neoclouds for enterprise business.

We disagree with CRWV's premise that its existing software moat will hold up to hyperscaler attacks, especially given hyperscalers' scale and ability to spend. We do not believe the structural concerns abate with increased AI demand, though the timing for our call may be pushed further out.

Importantly, we do not believe the tide will shift for CRWV in the very near term and anticipate them signing an incremental \$45B of deals between now and the end of 2027. We are roughly in line with consensus for 2026 expectations. By 2027, we begin to diverge, and by 2028, we are ~15% below consensus revenue estimates, accelerating through the forecast window.
