Where We Stand: Equity Call, Credit View, and Recent Work

NVDA is increasingly using its balance sheet to support AI infrastructure financing. Equity stakes, prepayments, leases, residual value support, unsold capacity, and revenue-sharing arrangements are becoming key funding mechanisms for ecosystem compute, warranting greater credit focus as contingent exposures grow.

Equity — Joseph Moore, US Semiconductors Research Analyst

Overweight | PT \$300

Rubin ramp, 70%+ CY27 revenue growth and a reset to more realistic gross margins improve the setup — inexpensive at ~14x CY27e EPS.

Credit — Lindsay Tyler, TMT Credit Research Analyst

Neutral | Sidelined

Exceptional growth is turning balance-sheet strength into a strategic AI financing tool – and introduces new risks. Our model and relative value are supportive, but we think the tail remains too early-stage, opaque, and sizable to step in.

The Equity Case: Rubin Ramp, 70% CY27 Growth, and Multiple Levers for Upside

Overweight; PT \$300 on 20x CY27e EPS of \$15.01 — a strong quarter that improves the setup from here.

- **Rubin lets NVDA take back the narrative.** 30x higher throughput per megawatt and 35x lower token cost vs Grace Blackwell Ultra, with opportunity per GW scaling from \$18bn (Hopper) to \$25bn (Blackwell) to \$40bn (Vera Rubin).
- **FY28 commentary very constructive at early stages.** ~70% FY28 revenue growth still severely supply constrained with demand as far greater than that level. Increasing product depth (networking, Groq, Vera) enables higher value capture
- **The gross margin reset clears an overhang.** Guidance for FY28 GM of 72-73% was broadly in line with MSe and essentially pass-through of expensive memory that grows gross profit dollars; supply commitments more than doubled to \$279bn, with \$179bn covering most of the \$252bn FY27-28 COGS estimate.
- **Rev share is upside not yet in numbers.** The neocloud opportunity is small today but growing quickly. At just a handful of GWs deployed we could begin to see double digit upside to FY29 EPS estimates with limited downside
- **Investments in the ecosystem will continue, and so will cash return.** Dividends plus buyback were >\$100bn run rate in the quarter, and will should roughly in-line with revenues next year. Supporting the case for value even through ecosystem support

Recent NVDA Credit Initiation – Balance Sheet-as-a-Service

Exceptional growth is turning balance-sheet strength into a strategic AI financing tool – and introduces new risks. Our model and relative value are supportive, but we think the tail remains too early-stage, opaque, and sizable to step in.

We forecast CY28-end all-in credit exposure scales to ~\$200bn, with ~\$170bn of that away from funded debt

But credit metrics look strong as that contingent exposure scales, even if headline growth moderates

Credit: Three Buckets of Debt Adjustment and Contingent Exposure

We incorporate **~\$170bn of debt adjustments and contingent obligations at CY28-end**. That number is comprised of three main buckets:

- 1) **~\$40bn of minimum ratings adjustments** for lease liabilities, including uncommenced commitments, partner lease guarantees, etc.
- 2) **~\$65bn of potential residual value support tied to the >\$500bn partnership** (discussed next)
- 3) **~\$65bn of illustrative support under our new revenue-sharing / credit-support model on 5GW** (discussed next)

Source: Company filings, Morgan Stanley Equity Research (Moore model dated 5/21/26), Moody's, S&P, Bloomberg, Morgan Stanley Credit Research

Credit: Forecasting Residual Value Support Exposure Related to \$500bn Partnership

As part of efforts to mobilize >\$500bn of third-party capital, NVDA may provide residual value support of up to 25% in some cases. Our multi-year RVS model illustrates potential timing and scale of NVDA exposure, incorporating assumed tranches, delayed draws, and amortization.

Our illustrative tail-risk exposure peaks near ~\$90bn shortly after CY28-end (~\$70bn tax-affected)

Source: Company filings, Morgan Stanley Equity Research (Moore model dated 5/21/26), Moody's, S&P, Bloomberg, Morgan Stanley Credit Research

A potential chip lease SPV would purchase chips, with debt backed by an AI customer chip lease and possibly IG support

Credit: Assessing Revenue-Sharing and Credit-Support Model

NVDA introduced a revenue-sharing and credit-support model in a July blog post that may create minimum revenue floors, helping bridge shorter-duration customer contracts and longer-duration financing.

Our hypothetical analysis assumes a 5GW capacity support roll-out, price floors triggered in year 3 at \$3/watt, and more

Credit: Spread Compensation Improved After Widening, But We Recommend Patience

NVDA trades at optically wide levels for an Aa1/AA credit, but we feel it's too early to step in given the scale and limited transparency of >\$1tr guided GPU/XPU-related creative financing in the ecosystem. The risk to our neutral stance is lower-than-expected contingent exposure.

Morgan Stanley & Co. LLC makes a market in the securities of Aeva Technologies Inc, Ambarella Inc.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of August 31, 2026)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

Stock Rating Category	Coverage Universe		Investment Banking Clients (IBC)			Other Material Investment Services Clients (MISC)	
	Count	% of Total	Count	% of Total IBC	% of Rating Category	Count	% of Total Other MISC
Overweight/Buy	1555	42%	450	48%	29%	767	44%
Equal-weight/Hold	1577	43%	395	42%	25%	770	44%
Not-Rated/Hold	3	0%	1	0%	33%	1	0%
Underweight/Sell	559	15%	93	10%	17%	216	12%
Total	3,694		939			1754	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.
