Semiconductors | North America

Weekly: Earnings Week 2 (AMKR, NVTS, NXPI, SWKS, QCOM, ALGM, ON); Thoughts on MRVL/Frozen, MCHP/Hailo

Stocks continue to see some downward pressure - but the numbers have been good and for the most part we see that continuing this week. We also touch on Google "Frozen" and Microchip's acquisition of Hailo.

Google Frozen could be a Marvell opportunity. Google (covered by Brian Nowak) is reportedly exploring "Frozen v2," a new chip designed specifically to run Gemini models more efficiently. Unlike a general-purpose TPU, Frozen v2 could hardwire elements of Gemini's architecture directly into the silicon, improving inference speed and power efficiency. Our checks suggest the chip will use on-chip SRAM, eliminating the need for CoWoS packaging, with limited production beginning in 2027 and a broader ramp in 2028. Per industry checks, we believe Marvell is a likely development partner, although the supplier has not been confirmed. More broadly, Frozen v2 reinforces the emerging trend toward SRAM-based solutions optimized for inference workloads. While volumes are expected to be modest initially, the program could still support Marvell's custom silicon outlook, particularly given management's guidance for more than 100% growth in 2027.

Microchip announced a definitive agreement to acquire Hailo on Friday while COO Richard Simoncic has resigned to become CEO of Menlo Microsystems (private). Hailo is a provider of accelerated edge AI processors, advanced vision processing solutions, and robotics processors - with financial terms undisclosed, the deal expected to remain immaterial, and closing targeted by end of September 2026. The deal fits a broader trend of semis positioning at the Physical AI/edge intersection, validated by ON's acquisition of Synaptics, and is consistent with Microchip's long history of acquisitions - having executed roughly 17 deals between 2009 and 2018 alone, including Atmel, Microsemi, and PMC-Sierra. While the strategic rationale is clear, with so many acquisitions over the years it can be difficult to track where value is being created - not necessarily a negative, but a complexity worth acknowledging given the core business remains deeply embedded in product markets where AI-driven revenue uplift is slow to materialize.

AMKR (EW, reporting after the market close on Monday, July 27th): Looking for additional details on the NVIDIA and TSMC deals and the pace of GM% expansion. With the stock up 50% YTD and advanced packaging continuing to see momentum, the focus around the Arizona opportunity has continued to intensify

Morgan Stanley does and seeks to do business with companies covered in Morgan Stanley Research. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of Morgan Stanley Research. Investors should consider Morgan Stanley Research as only a single factor in making their investment decision.

For analyst certification and other important disclosures, refer to the Disclosure Section, located at the end of this report.

throughout the quarter. The Analyst Day in May provided greater clarity on the Arizona build-out, though we continue to view estimate revisions as more likely to be driven by later in the year - particularly around the HDFO ramp cadence and the 2H margin bridge. **For the print, we're focused on:**

1.) Potential for AMKR pricing benefit as OSAT capacity tightens. The broader backend capacity environment is clearly tight: industry utilization overall is running at ~90% (while AMKR is at mid-70's%), ASE has raised advanced packaging quotes by more than 20%, and non-TSMC CoWoS capacity (Amkor + ASE) is expected to reach ~80kwpm by end-2027 with Amkor growing from 20kwpm to 30kwpm (MSe). TSMC confirmed its own advanced packaging capacity is "*so tight that it is limited by customers' growth*," welcoming third-party OSATs to absorb overflow. The question is how much of this pricing power flows through to Amkor's P&L - mgmt cited pricing, utilization, and mix as the three levers for 2H GM% expansion, but substrate and material constraints (advanced silicon, memory, BT substrate up 20-30%) are creating nonlinear loading that could limit the capture. We want to hear how much of the industry price upcycle is already in guidance vs. still to come.

2.) Whether the Arizona dilution path has changed since the Analyst Day. The key overhang on the stock in our view remains the pace of GM% recovery and is the primary driver of our EW rating. Mgmt guided for 1-2% operating income dilution starting in 2027 as Arizona construction costs flow through OpEx before programs qualify in ~2028, and the 2028 EPS target of \$2.50 came in below both our estimate and consensus. [The \\$1.5bn NVIDIA deal](#) and TSMC procurement agreement are strategically important validations of the demand side, though it remains to be seen whether they materially change the dilution math - higher depreciation from front-loaded HDFO equipment and ongoing material supply constraints are real offsets, and we think the earnings power inflection timeline warrants watching closely. We are modestly more conservative than the Street on the pace of the bridge and look to the print for any update to the 2028 framework.

NVTS (UW, reporting after the market close on Monday, July 27th): Expectations are high for an 800V sampling update and additional detail on recent NVTS announcements. As we move through 2H26 and closer to 2027, investors are hyperfocused on evidence of progress in Navitas' 800V roadmap. The company delivered final production samples to customers last quarter and recently announced a licensing deal with Magnachip for GeneSiC Gen 4/5 TAP SiC technology - though we view the Magnachip opportunity as immaterial to the Navitas story near-term, as Magnachip is only just beginning its SiC journey and investors remain squarely focused on the 800V GaN HVDC theme. Legal actions from Renesas and Wolfspeed against Navitas remain an overhang on the stock.

We continue to acknowledge that Navitas 2.0 is moving in the right direction and give credit for the HSD q/q growth mgmt has guided to - but significant proof points remain in question. The stock has pulled back ~70% from its June ATH of \$34 - a meaningful reset, but one that still leaves a wide gap between where the stock is and where the fundamentals are, with a sub-\$10mn quarterly run rate and a long-duration catalyst path. We continue to see more favorable risk/reward elsewhere for

high-power themes such as GaN in other MS-covered names such as Innoscience (Daisy Dai), Renesas (Kazuo Yoshikawa), and Infineon (Lee Simpson), which already have incumbency status.

NXPI (OW, reporting after the market close on Tuesday, July 28th): We expect NXP to report an above-consensus JunQ and SepQ guide as peer read-throughs have been quite strong. In our [2Q26 Distributor Survey](#), auto expectations were notably mixed relative to Industrial, with respondents recording weaker-than-seasonal expectations increasing from 6% to 15%. That said, after overall strong results from [TI](#) and [STMicro](#) last week - with auto in particular outperforming (+HSD % q/q for TI and +14% q/q for STMicro) - the setup for NXP's print has become more de-risked. More broadly, TI reported a beat and raise, characterizing this point in time as "the start of a cycle that is very, very broad." STMicro similarly beat its JunQ guide, led by auto and Industrial, book-to-bills close to 2 overall, and distribution inventory now below its standard target. With NXP having guided 2Q26 revenue of \$3.45bn (+18% y/y, +8% q/q) and auto at +HSD q/q, the peer data de-risks the JunQ guide and raises the bar for a SepQ raise. What we are focused on for earnings:

1. Lead times and supply tightness: TI confirmed lead times ticked up a couple of weeks in 2Q26 - from below 13 weeks to slightly above - "simply because the demand is growing," with competitors now quoting 52-week lead times. Additionally, CEO Haviv Ilan called out auto dynamics: *I think our automotive customers have taken their inventory to very low levels. And now, as there is a little bit more demand, they find themselves in a situation that is not sustainable. I think that also drove part of the demand.* Backlog built throughout 2Q26 for both immediate and forward shipment, with short lead time orders a meaningful driver of TI's above-range result. For NXP, which at 1Q26 noted "slight bottlenecks in certain parts of the supply chain" and was already taking selective pricing adjustments, the TI data suggests tightness has intensified further through the quarter - any commentary on lead time extension or escalating customer urgency would be a meaningful positive signal for 2H visibility.

2. Automotive strength driven by China EV/hybrid momentum: TI's automotive inflection was led by China EVs/hybrids, with demand having "developed throughout the quarter" - not visible at the April call and building as the quarter progressed, suggesting the cycle is still early. STMicro confirmed automotive performed "above what we expect and what the market is expecting," guiding the segment to grow ~13-14% y/y for the full year. The read-through for NXP is particularly strong: unlike TI's analog/power-heavy auto exposure, NXP's growth is driven by SDV architecture transitions - S32N, S32K5, imaging radar, 10-gigabit Ethernet - which are content-per-vehicle stories independent of SAAR. NXP's accelerated growth drivers were already north of 45% of auto revenue in 1Q26 and growing double digits, positioning it to capture the tailwinds seen by TI and STMicro.

SWKS (EW, reporting after the market close on Tuesday, July 28th): Skyworks has continued to execute well despite a challenging smartphone environment, and we see a relatively balanced setup heading into the June-quarter print. We

model mobile revenue declining ~4% q/q, consistent with management's outlook for an LSD decline, with Broad Markets remaining relatively stable. Apple demand appears to be the most resilient part of the smartphone market, and our hardware team does not anticipate any meaningful changes in iPhone builds in the C2H (Apple covered by Erik Woodring). Given Skyworks' concentration in premium smartphones, we believe the company should hold up better than suppliers with greater exposure to lower-end devices, although rising memory costs and the resulting pressure on handset pricing and demand remain an industry-wide headwind to watch. Blended RF content at Apple should remain roughly flat near term.

Looking to September, we model total revenue increasing 10% q/q, including mobile growth of 16%. Mobile growth is slightly below seasonal, which is typically ~20% q/q, but we are remaining conservative given memory-related cost inflation that is a significant risk, and September iPhone builds that are tracking below seasonal, which may be partly due to Apple's staggered launch. We continue to view the Qorvo acquisition positively, with management targeting an early-2027 close or possibly late 2026.

QCOM (EW, reporting after the market close on Wednesday, July 29th): We moved off Underweight after Qualcomm's data center investor day, as the \$5bn FY27 target made the diversification story far more tangible. Handsets remain under pressure from Android weakness, memory inflation and Apple modem share loss, but the debate has shifted to whether data center can scale fast enough to offset those headwinds. We expect challenging handset fundamentals for the next few quarters.

Double-digit chipset pricing could cushion the Android downturn. We model June handset revenue of \$4.9bn, in line with guidance, with management calling June the bottom for China Android. Bloomberg reported that Qualcomm is raising chipset prices by double digits to offset higher costs, which should support margins, though the benefit will take time and could further pressure demand. We model flattish Android revenue in September and see limited recovery thereafter, with some weakness broadening beyond the low end. Qualcomm should outperform given its premium mix, but we remain below consensus for September at \$9.5bn of revenue (1.5% q/q and -15.5% y/y), including \$4.6bn of handset revenue (-7% q/q and -33% y/y). Apple share loss also becomes more material, with Qualcomm's share of iPhone units falling from roughly 70% in September to 40% in December, though this is well understood. We updated our model to reflect our hardware team's latest Apple assumptions and our revised expectations for Qualcomm's share, with no material change to our full-year estimates.

Diversification is gaining traction, with automotive as the foundation and data center the key swing factor, with possible Trainium participation. Automotive should remain a bright spot, with Qualcomm on track to exit FY26 at approximately a \$6bn revenue run rate according to the latest guidance. In data center, the \$5bn FY27 target appears largely driven by custom silicon, including at least two \$1bn-plus programs, with little contribution from Qualcomm's own CPU or merchant

accelerator products. Alphawave's existing wins should be a meaningful part of the ramp. Qualcomm also continues to develop a custom AI XPU for ByteDance that uses LPDDR rather than HBM, with shipments expected next year. We have also heard Qualcomm could receive a portion of the Trainium opportunity alongside Marvell and Alchip, potentially supported by its access to 3nm wafers. Qualcomm remains our least-preferred AI exposure and the longer-term roadmap is still a show-me story, but \$5bn in FY27 would materially help fill the handset hole and validate the diversification strategy.

ALGM (OW; reports before market open Thursday, July 30th): Strong quarter with continued secular momentum expected, though expectations for auto strength are elevated. We expect Allegro to come in at the high end of its JunQ revenue range with a strong SepQ guide. Following last quarter which was squarely in-line amidst exceptionally high expectations, Allegro is expected to report near the high-end of guidance this quarter as peers TI and STMicro have noted a clear and durable acceleration in automotive demand and overall cyclical dynamics continue to improve.

Since last earnings, the stock has seen significant volatility concentrated in late June/early July which we believe was driven by excitement in Physical AI following ON's acquisition of Synaptics. While Allegro has clarified that material revenue from humanoid robotics is a 2030 opportunity, the company has continued to highlight customer engagement and design win activity. Peer TI flagged that Physical AI was one of the strongest areas within Industrial outside of A&D and energy, and greater detail may provide upside to the stock. **For earnings, we are focused on the following:**

1) Auto e-Mobility momentum. Auto was flat sequentially in MarQ due largely to seasonal CNY impacts. For JunQ, MSe is +2.1% q/q (+16.0% y/y) to \$167mn, with further acceleration in SepQ to \$174mn (+4.0% q/q, +11.7% y/y). Lean OEM inventories and continued PHEV/BEV content gains support the recovery. TI reported auto up mid-teens y/y and upper-single digits q/q in JunQ, characterizing demand as "everywhere" and noting "a cycle that is very, very broad," led by China EVs/hybrids and unsustainably low customer inventory levels. STM reported auto up 16% y/y and 14% q/q in Q2, with design momentum building across OEM and Tier 1 ecosystems in onboard chargers, powertrain and ADAS.

2) Data Center momentum and progress on the current sensor ramp. Data center reached ~14% of MarQ revenue (up from ~10% in DecQ), and mgmt guided it to reach 16-17% of revenue in JunQ - a new record, implying 20-25% sequential growth. The fastest-growing component is now current sensors, which represented 18% of data center shipments in MarQ (up from zero at the start of FY26), driven by content gains replacing resistors in power racks. Data center and broader Industrial momentum remains according to peers. Critically, current sensors are one of Allegro's higher-margin products - previously data center was margin dilutive driven by motor drivers, but as current sensor mix increases, data center GM is approaching fleet average and is expected to exceed it in the back half of FY27.

ON (++, reporting after the market close on Monday, August 3rd): Expectations have moderated following the stock's sell-off along with power semi peers. While the company reiterated 2Q guidance, we still see potential for a beat and raise as the setup is more favorable than it appears given +ve peer read-throughs. **For the print, we are focused on:**

1.) Power market recovery: STMicro's 2Q26 earnings call this week highlighted that SiC revenue grew low-teens year-over-year and mid-30s% quarter-over-quarter in 2Q, supported by a book-to-bill well above 1 and a growing backlog - with mgmt confirming SiC revenues will grow double-digit in 2026 versus 2025 based on existing design wins and backlog. STM also noted confidence in a strong 2026, citing *"on top of ADAS, SiC, sensor, general-purpose micro, clearly, AI infrastructure and low-earth-orbit satellite will be a very strong contributor to the performance of ST in 2026,"* along with improving demand in SiC-based power solutions for data center and continued traction in auto design wins. We do believe the broader power market environment has improved, which could have positive netting effects for 2H if replenishment remains muted or does not materialize as expected.

2.) GM% expansion: As of 4Q25, ON had ~700bps of GM% headwinds as a result of underutilization charges (driven by topline). The company gave guidance toward an uptick in utilization in 1Q - which came in at 77%, up from 68% - and an expected trend toward the mid-70s% for the year with progression weighted toward 2H, with utilization guided flat to up slightly in 2Q. With ON already having announced \$200-\$300mn of impairment charges to be recognized through 1H of this year, an associated \$45-\$50mn depreciation benefit in 2026 hitting the P&L in 2H as inventory bleeds through, pricing actions now offsetting input cost headwinds in 2H, and the July 7 announcement of two fab divestitures expected to generate ~\$35mn in annual cost savings starting in 2027, we do see upside toward the year's GM% with the potential for a 4-handle (vs. MSe and Street at 39.6%), which we would see as a surprise relative to buy-side expectations.

AlphaSignals Earnings Preview

Focus KPI	Focus KPI Surprise	Likely impact to consensus EPS*
-----------	--------------------	---------------------------------

Skyworks Solutions Inc SWKS.O

Mobile Revenue — In-line — Largely unchanged

- Skyworks has continued to execute well despite a challenging smartphone environment, and we see a relatively balanced setup heading into the June-quarter print.

Qualcomm Inc. QCOM.O

September Revenue ⬇️ Likely downside surprise — Largely unchanged

- Handset fundamentals remain challenged, but the \$5bn FY27 data center target could materially accelerate Qualcomm’s diversification.

Amkor Technology Inc AMKR.O

AMKR Earnings Preview

The company is scheduled to report after the market close on Monday, July 27th.

Looking for additional details on the NVIDIA and TSMC deals and the pace of GM% expansion. With the stock up 50% YTD and advanced packaging continuing to see momentum, the focus around the Arizona opportunity has continued to intensify throughout the quarter. The Analyst Day in May provided greater clarity on the Arizona build-out, though we continue to view estimate revisions as more likely to be driven by later in the year - particularly around the HDFO ramp cadence and the 2H margin bridge.

For the print, we're focused on:

1.) Potential for AMKR pricing benefit as OSAT capacity tightens. The broader backend capacity environment is clearly tight: industry utilization overall is running at ~90% (while AMKR is at mid-70's%), ASE has raised advanced packaging quotes by more than 20%, and non-TSMC CoWoS capacity (Amkor + ASE) is expected to reach ~80kwpm by end-2027 with Amkor growing from 20kwpm to 30kwpm (MSe). TSMC confirmed its own advanced packaging capacity is "so tight that it is limited by customers' growth," welcoming third-party OSATs to absorb overflow. The question is how much of this pricing power flows through to Amkor's P&L - mgmt cited pricing, utilization, and mix as the three levers for 2H GM% expansion, but substrate and material constraints (advanced silicon, memory, BT substrate up 20-30%) are creating nonlinear loading that could limit the capture. We want to hear how much of the industry price upcycle is already in guidance vs. still to come.

2.) Whether the Arizona dilution path has changed since the Analyst Day. The key overhang on the stock in our view remains the pace of GM% recovery and is the primary driver of our EW rating. Mgmt guided for 1-2% operating income dilution starting in 2027 as Arizona construction costs flow through OpEx before programs qualify in ~2028, and the 2028 EPS target of \$2.50 came in below both our estimate and consensus. [The \\$1.5bn NVIDIA deal](#) and TSMC procurement agreement are strategically important validations of the demand side, though it remains to be seen whether they materially change the dilution math - higher depreciation from front-loaded HDFO equipment and ongoing material supply constraints are real offsets, and we think the earnings power inflection timeline warrants watching closely. We are modestly more conservative than the Street on the pace of the bridge and look to the print for any update to the 2028 framework.

Details on the June quarter: We model revenue of \$1,810mn (up 7.4% q/q and up 19.8% y/y), in-line with the street at \$1,811 mn. We model gross margin/EPS of 15.1%/\$0.46, in-line with the street at 15.2%/\$0.47.

September quarter outlook: We model revenue of \$2,026 mn (up 11.9% q/q and 2% y/y), below street at \$2,098mn. We model gross margin/EPS of 16.3%/\$0.59, below the street at 17.4%/\$0.63.

Navitas Earnings Preview

The company is scheduled to report after the market close on Monday, July 27th.

Expectations are high for an 800V sampling update and additional detail on recent NVTS announcements. As we move through 2H26 and closer to 2027, investors are hyperfocused on evidence of progress in Navitas' 800V roadmap. The company delivered final production samples to customers last quarter and recently announced a licensing deal with Magnachip for GeneSiC Gen 4/5 TAP SiC technology - though we view the Magnachip opportunity as immaterial to the Navitas story near-term, as Magnachip is only just beginning its SiC journey and investors remain squarely focused on the 800V GaN HVDC theme. Legal actions from Renesas and Wolfspeed against Navitas remain an overhang on the stock.

We continue to acknowledge that Navitas 2.0 is moving in the right direction and give credit for the HSD q/q growth mgmt has guided to - but significant proof points remain in question. The stock has pulled back ~70% from its June ATH of \$34 - a meaningful reset, but one that still leaves a wide gap between where the stock is and where the fundamentals are, with a sub-\$10mn quarterly run rate and a long-duration catalyst path. We continue to see more favorable risk/reward elsewhere for high-power themes such as GaN in other MS-covered names such as Innoscience (Daisy Dai), Renesas (Kazuo Yoshikawa), and Infineon (Lee Simpson), which already have incumbency status.

Details on the June quarter: We model revenue of \$10.0mn, up 16.3% q/q, in-line with the Street at \$10.0mn. Our gross margin/EPS estimate of 40.7%/(\$0.04) is also in-line with the Street at 38.8%/(\$0.04).

September quarter outlook: We model revenue of \$11.4mn, up 14.5% q/q, slightly above the Street at \$11.1mn. Our gross margin/EPS estimate of 41.0%/(\$0.04) is broadly in-line with the Street at 39.2%/(\$0.04).

RISK REWARD CHART

Key: — Historical Stock Performance ● Current Stock Price ◆ Price Target

Source: Refinitiv, Morgan Stanley Research

UNDERWEIGHT THESIS

- The GaN market is increasingly looking more competitive, with STMicro, Infineon, and Renesas all making inroads into GaN via acquisitions and partnerships. While these larger players may expedite the adoption of GaN in markets outside smartphone chargers and expand the TAM, we expect these opportunities to be captured by more established power semi providers rather than Navitas given their supply assurance and automotive qualification experience.
- NVDA's 800V AI server racks are an enticing opportunity, but given competition and timeline, we think it is too early to fully price in this opportunity.

Risk Reward Themes

Special Situation: Positive
Technology Diffusion: Positive

View descriptions of Risk Rewards Themes [here](#)

BULL CASE

\$22.70

70x CY2027 revenue of \$79.3mn

GaN & SiC adoption progresses in automotive and data center, and a smartphone market recovery accelerates Navitas' revenue growth. Navitas' GaN business growth outpaces the market and the company gains market share at NVDA's 800V AI server racks.

-CY2027 revenue of \$79.3mn (+83% y/y)

BASE CASE

\$13.70

50x CY2027 revenue of \$66mn

Navitas' GaN & SiC business continue to struggle due to increased competition from large players. Navitas is only able to capture marginal share at NVDA's 800V AI server racks.

-CY2027 revenue of \$66mn (+53% y/y)

BEAR CASE

\$4.90

20x CY2027 revenue of \$52.8mn

Competitors threaten Navitas' market share by rolling out lower ASP products, subsequently pressuring Navitas' market share and margins. Growth in SiC business slows due to increased competition. Navitas is unable to capture any share at NVDA's 800V AI server racks.

-CY2027 revenue of \$52.8mn (+22% y/y)

Risk Reward – Navitas Semiconductor Corp (NVT.S.O)

KEY EARNINGS INPUTS

NXPI Earnings Preview

The company is scheduled to report after the market close on Tuesday, July 28th.

We expect NXP to report an above-consensus JunQ and SepQ guide as peer read-throughs have been quite strong. In our [2Q26 Distributor Survey](#), auto expectations were notably mixed relative to Industrial, with respondents recording weaker-than-seasonal expectations increasing from 6% to 15%. That said, after overall strong results from [TI](#) and [STMicro](#) last week - with auto in particular outperforming (+HSD% q/q for TI and +14% q/q for STMicro) - the setup for NXP's print has become more de-risked. More broadly, TI reported a beat and raise, characterizing this point in time as "the start of a cycle that is very, very broad." STMicro similarly beat its JunQ guide, led by auto and Industrial, book-to-bills close to 2 overall, and distribution inventory now below its standard target. With NXP having guided 2Q26 revenue of \$3.45bn (+18% y/y, +8% q/q) and auto at +HSD q/q, the peer data de-risks the JunQ guide and raises the bar for a SepQ raise. What we are focused on for earnings:

1. Lead times and supply tightness: TI confirmed lead times ticked up a couple of weeks in 2Q26 - from below 13 weeks to slightly above - "simply because the demand is growing," with competitors now quoting 52-week lead times. Additionally, CEO Haviv Ilan called out auto dynamics: *I think our automotive customers have taken their inventory to very low levels. And now, as there is a little bit more demand, they find themselves in a situation that is not sustainable. I think that also drove part of the demand.* Backlog built throughout 2Q26 for both immediate and forward shipment, with short lead time orders a meaningful driver of TI's above-range result. For NXP, which at 1Q26 noted "slight bottlenecks in certain parts of the supply chain" and was already taking selective pricing adjustments, the TI data suggests tightness has intensified further through the quarter - any commentary on lead time extension or escalating customer urgency would be a meaningful positive signal for 2H visibility.

2. Automotive strength driven by China EV/hybrid momentum: TI's automotive inflection was led by China EVs/hybrids, with demand having "developed throughout the quarter" - not visible at the April call and building as the quarter progressed, suggesting the cycle is still early. STMicro confirmed automotive performed "above what we expect and what the market is expecting," guiding the segment to grow ~13-14% y/y for the full year. The read-through for NXP is particularly strong: unlike TI's analog/power-heavy auto exposure, NXP's growth is driven by SDV architecture transitions - S32N, S32K5, imaging radar, 10-gigabit Ethernet - which are content-per-vehicle stories independent of SAAR. NXP's accelerated growth drivers were already north of 4-5% of auto revenue in 1Q26 and growing double digits, positioning it to capture the tailwinds seen by TI and STMicro.

Details on the June quarter: We model revenue of \$3.486bn, up 9.6% q/q and up 19.1% y/y, slightly above the Street at \$3.466bn. We forecast Automotive sales to be up 10.0% q/q and up 13.4% y/y, Industrial & IoT to be up 18.0% q/q and up 35.7% y/y, Mobile to be down 12.0% q/q and up 4.0% y/y, and Communications to be up 16.0% q/q and up 37.8% y/y. We estimate gross margin and EPS of 58.0%/ \$3.57, in-line with the Street at 57.9%/ \$3.52.

September Quarter Outlook: We estimate revenue of \$3.706bn, up 6.3% q/q and up 16.8% y/y, in-line with the Street at \$3.706bn. We forecast Automotive sales to be up

6.0% q/q and up 13.1% y/y, Industrial & IoT to be up 4.0% q/q and up 33.1% y/y, Mobile to be up 16.0% q/q and down 7.2% y/y, and Communications to be up 4.0% q/q and up 40.2% y/y. We estimate gross margin and EPS of 58.7%/\$4.08, in-line the Street at 58.7%/\$4.03.

Risk Reward – NXP Semiconductor NV (NXPI.O)

OW as cyclical and idiosyncratic tailwinds align

PRICE TARGET \$335.00

Our PT represents 18x our CY27 Non-GAAP EPS estimate, a slight premium to the company's historical average and auto semi peers which we think is justified given the company's downcycle management and set up to outperform peers in 2026/2027.

RISK REWARD CHART AND OPTIONS IMPLIED PROBABILITIES (12M)

Source: Refinitiv, Morgan Stanley Research, Morgan Stanley Institutional Equities Division. The probabilities of our Bull, Base, and Bear case scenarios playing out were estimated with implied volatility data from the options market as of 24 Jul 2026. All figures are approximate risk-neutral probabilities of the stock reaching beyond the scenario price in either three-months' or one-years' time. View explanation of Options Probabilities methodology [here](#)

OVERWEIGHT THESIS

■ We remain OW NXP on the back of: 1) **NXP should outperform Auto semis in 2026** as auto joins other end markets in a recovery. 2) **Structural improvements to the business:** NXP has multiple levers to improve gross margin from here (channel shipments, internal utilization, and overall revenue growth); and 3) **Favorable MCU set up into 2026** as momentum acceleration appears likely to inflect.

SWKS Earnings Preview

The company is schedule to report after the market close on Tuesday, July 28th.

Skyworks has continued to execute well despite a challenging smartphone environment, and we see a relatively balanced setup heading into the June-quarter print. We model mobile revenue declining ~4% q/q, consistent with management's outlook for an LSD decline, with Broad Markets remaining relatively stable. Apple demand appears to be the most resilient part of the smartphone market, and our hardware team does not anticipate any meaningful changes in iPhone builds in the C2H (Apple covered by Erik Woodring). Given Skyworks' concentration in premium smartphones, we believe the company should hold up better than suppliers with greater exposure to lower-end devices, although rising memory costs and the resulting pressure on handset pricing and demand remain an industry-wide headwind to watch. Blended RF content at Apple should remain roughly flat near term.

Looking to September, we model total revenue increasing 10% q/q, including mobile growth of 16%. Mobile growth is slightly below seasonal, which is typically ~20% q/q, but we are remaining conservative given memory-related cost inflation that is a significant risk, and September iPhone builds that are tracking below seasonal, which may be partly due to Apple's staggered launch. We continue to view the Qorvo acquisition positively, with management targeting an early-2027 close or possibly late 2026.

Details on the quarter: For the June quarter, we model revenue of \$925mn, down 2.0% q/q and 4.1% y/y, broadly in line with the Street. By segment, we model Mobile revenue of \$525.5mn and Broad Markets revenue of \$399.5mn. We model non-GAAP gross margin of 45.0% and EPS of \$1.05, both broadly in line with the Street.

Next-quarter outlook: For the September quarter, we model revenue of \$1.013bn, up 9.5% q/q and down 7.9% y/y. By segment, we model Mobile revenue of \$609.5mn, up 16% q/q, and Broad Markets revenue of \$403.5mn, up 1% q/q. We model non-GAAP gross margin of 45.8% and EPS of \$1.30, both broadly in line with the Street.

Exhibit 4: SWKS: MS vs. Cons

Risk Reward – Skyworks Solutions Inc (SWKS.O)

Content growth opportunities long term, but EW on customer concentration

PRICE TARGET \$76.00

With the deal synergies, we believe that combined CY27 EPS would be about \$7, vs. our standalone \$5.62, so this would be about ~13x the combined entity. Given some deal risk and synergy uncertainties, we would prefer to value on standalone EPS with a 13.5x multiple.

Consensus Price Target Distribution

Source: Refinitiv, Morgan Stanley Research

RISK REWARD CHART AND OPTIONS IMPLIED PROBABILITIES (12M)

Key: — Historical Stock Performance ● Current Stock Price ◆ Price Target

Source: Refinitiv, Morgan Stanley Research, Morgan Stanley Institutional Equities Division. The probabilities of our Bull, Base, and Bear case scenarios playing out were estimated with implied volatility data from the options market as of 24 Jul 2026. All figures are approximate risk-neutral probabilities of the stock reaching beyond the scenario price in either three-months' or one-years' time. View explanation of Options Probabilities methodology [here](#)

EQUAL-WEIGHT THESIS

- SWKS announced an acquisition of RF Peer QRVO, expected to close in CY27. The deal is expected to be accretive and help strengthen mobile technologies and expand scale.
- We like the long term growth story at Skyworks, encouraged by Wi-Fi 7 IoT upgrade cycles and emerging auto business. Near term the company is seeing share loss with its top customer Apple, and we think it will also be important to broaden its exposure. The broad markets business is seeing a recovery from inventory imbalance and reduced end demand
- We see valuation upside if the broad markets business were to make up a larger proportion of the business, or if the company's mobile business is able to capture demand in China.

Consensus Rating Distribution

Source: Refinitiv, Morgan Stanley Research

BULL CASE	\$105.00	BASE CASE	\$76.00	BEAR CASE	\$43.00
16X CY27 Non-GAAP EPS of \$6.58		13x CY27 EPS of \$5.62		8X CY27 Non-GAAP EPS of \$5.34	
The SWKS/QRVO acquisition occurs. Revenue growth comes in above our expectations as a broader smartphone recovery leads to greater \$ content and smartphone unit growth. Gross margins improve towards SWKS' target model, WiFi 7/8 upgrades benefit Broad Markets, and cash returns to shareholders boost the multiple.		Skyworks posts 8% decline in CY26 and 2.1% revenue growth in CY27. Broad markets outgrows corporate avg and Apple content flat.		The acquisition deal is canceled. Skyworks loses significant share at Apple, and the company fails to diversify. The stock's valuation multiple de-rates further.	

Risk Reward – Skyworks Solutions Inc (SWKS.O)

KEY EARNINGS INPUTS

Qualcomm Earnings Preview

The company is scheduled to report after the market close on Wednesday, July 29th.

We moved off Underweight after Qualcomm's data center investor day, as the \$5bn FY27 target made the diversification story far more tangible. Handsets remain under pressure from Android weakness, memory inflation and Apple modem share loss, but the debate has shifted to whether data center can scale fast enough to offset those headwinds. We expect challenging handset fundamentals for the next few quarters.

Double-digit chipset pricing could cushion the Android downturn. We model June handset revenue of \$4.9bn, in line with guidance, with management calling June the bottom for China Android. Bloomberg reported that Qualcomm is raising chipset prices by double digits to offset higher costs, which should support margins, though the benefit will take time and could further pressure demand. We model flattish Android revenue in September and see limited recovery thereafter, with weakness broadening beyond the low end. Qualcomm should outperform given its premium mix, but we remain below consensus for September at \$9.5bn of revenue (1.5% q/q and -15.5% y/y), including \$4.6bn of handset revenue (-7% q/q and -33% y/y). Apple share loss also becomes more material, with Qualcomm's share of iPhone units falling from roughly 70% in September to 40% in December, though this is well understood. We updated our model to reflect our hardware team's latest Apple assumptions and our revised expectations for Qualcomm's share, with no material change to our full-year estimates.

Diversification is gaining traction, with automotive as the foundation and data center the key swing factor, with possible Trainium participation. Automotive should remain a bright spot, with Qualcomm on track to exit FY26 at approximately a \$6bn revenue run rate according to the latest guidance. In data center, the \$5bn FY27 target appears largely driven by custom silicon, including at least two \$1bn-plus programs, with little contribution from Qualcomm's own CPU or merchant accelerator products. Alphawave's existing wins should be a meaningful part of the ramp. Qualcomm also continues to develop a custom AI XPU for ByteDance that uses LPDDR rather than HBM, with shipments expected next year. We have also heard Qualcomm could receive a portion of the Trainium opportunity alongside Marvell and Alchip, potentially supported by its access to 3nm wafers. Qualcomm remains our least-preferred AI exposure and the longer-term roadmap is still a show-me story, but \$5bn in FY27 would materially help fill the handset hole and validate the diversification strategy.

Details on the June Quarter: We model revenue of \$9.6bn, down 8.8% q/q and 6.7% y/y, broadly in line with the Street at \$9.7bn. By segment, we model QCT revenue of \$8.4bn, down 7.0% q/q and 6.2% y/y, and QTL revenue of \$1.2bn, down 10.9% q/q and 6.6% y/y. Our gross margin estimate of 56.0% is 40bps above consensus at 55.6%, while our EPS estimate of \$2.18 is slightly below the Street at \$2.23.

Details on the September Quarter: We model revenue of \$9.5bn, down 1.5% q/q and 15.2% y/y, roughly \$500mn below the Street at \$10.0bn. By segment, we model QCT revenue of \$8.3bn, down 1.7% q/q and 15.6% y/y, and QTL revenue of \$1.2bn, roughly flat q/q and down 12.7% y/y. Our gross margin estimate of 55.6% is broadly in line with consensus at 55.5%, while our EPS estimate of \$2.10 is below the Street at \$2.37.

View explanation of Options Probabilities methodology [here](#)

EQUAL-WEIGHT THESIS

- Handset volumes seem likely to be pressured by severe memory shortage, starting at the low end and becoming more pervasive as the year goes on
- Diversification into automotive has been very strong, and new data center initiatives look promising near-term but remain a show-me story longer-term
- The data center AI opportunity is obviously so large that even a modicum of success can make a difference even to a larger company like Qualcomm, but getting to critical mass is also very difficult. We are watching developments here closely.

Consensus Rating Distribution

Source: Refinitiv, Morgan Stanley Research

BULL CASE	\$305.00	BASE CASE	\$231.00	BEAR CASE	\$108.00
33X Base Case CY26 MW EPS of \$9.23		28x CY27 MW EPS of \$8.25		20X Bear Case CY26 MW EPS of \$5.42	
Exposure to premium market shields QCOM from most of memory headwinds. Autos, IoT, and Data Center scale quickly to diversify away from the smartphone market.		While we are expecting a muted smartphone cycle from memory constraints, the new data center revenue is offsetting headwinds. We are valuing it at the midpoint of their historic range.		Memory constraints worse than expected, smartphone is pressured even at the high end. Diversification story fails to develop.

Allegro Microsystems Earnings Preview

The company is scheduled to report before the market open on Thursday, July 30th.

Strong quarter with continued secular momentum expected, but the bar has risen. We expect Allegro to come in at the high end of its JunQ revenue range with a strong SepQ guide. Following last quarter which was squarely in-line amidst exceptionally high expectations, Allegro is expected to report near the high-end of guidance this quarter as peers TI and STMicro have noted a clear and durable acceleration in automotive demand and overall cyclical dynamics continue to improve.

Since last earnings, the stock has seen significant volatility concentrated in late June/early July which we believe was driven by excitement in Physical AI following ON's acquisition of Synaptics. While Allegro has clarified that material revenue from humanoid robotics is a 2030 opportunity, the company has continued to highlight customer engagement and design win activity. Peer TI flagged that Physical AI was one of the strongest areas within Industrial outside of A&D and energy, and greater detail may provide upside to the stock.

For earnings, we are focused on the following:

1) Auto e-Mobility momentum. Auto was flat sequentially in MarQ due largely to seasonal CNY impacts. For JunQ, MSe is +2.1% q/q (+16.0% y/y) to \$167mn, with further acceleration in SepQ to \$174mn (+4.0% q/q, +11.7% y/y). Lean OEM inventories and continued PHEV/BEV content gains support the recovery. TI reported auto up mid-teens y/y and upper-single digits q/q in JunQ, characterizing demand as "everywhere" and noting "a cycle that is very, very broad," led by China EVs/hybrids and unsustainably low customer inventory levels. STM reported auto up 16% y/y and 14% q/q in Q2, with design momentum building across OEM and Tier 1 ecosystems in onboard chargers, powertrain and ADAS.

2) Data Center momentum and progress on the current sensor ramp. Data center reached ~14% of MarQ revenue (up from ~10% in DecQ), and mgmt guided it to reach 16-17% of revenue in JunQ - a new record, implying 20-25% sequential growth. The fastest-growing component is now current sensors, which represented 18% of data center shipments in MarQ (up from zero at the start of FY26), driven by content gains replacing resistors in power racks. Data center and broader Industrial momentum remains according to peers. Critically, current sensors are one of Allegro's higher-margin products - previously data center was margin dilutive driven by motor drivers, but as current sensor mix increases, data center GM is approaching fleet average and is expected to exceed it in the back half of FY27.

Details on the June quarter: We model revenue of \$253mn (up 4.0% q/q and 24.4% y/y), ahead of the street at \$251mn, and non-GAAP GM/EPS of 50.6%/\$0.21, slightly ahead/in line with the street at 50.3%/\$0.21. By segment, we model Automotive at \$167mn (up 2.1% q/q and 16.0% y/y) and Industrial at \$86mn (up 8.0% q/q and 44.8% y/y).

September quarter outlook: We model revenue of \$270mn (up 6.7% q/q and 26.0% y/y), ahead of the street at \$263mn, and non-GAAP GM/EPS of 51.4%/\$0.26, ahead of the street at 50.7%/\$0.24. By segment, we model Automotive at \$174mn (up 4.0% q/q and 11.7% y/y) and Industrial at \$96mn (up 12.0% q/q and 64.1% y/y).

Risk Reward – Allegro Microsystems Inc (ALGM.O)

Recovery still below peak; secular growth vectors expanding

PRICE TARGET \$51.00

35x CY27 Non-GAAP EPS of \$1.45. Slight discount to the company's long-term average PE multiple since 2022, which is a premium to auto semi peers but in-line with higher gross margin analog/MCU companies.

Consensus Price Target Distribution

Source: Refinitiv, Morgan Stanley Research

RISK REWARD CHART

Key: — Historical Stock Performance ● Current Stock Price ◆ Price Target

Source: Refinitiv, Morgan Stanley Research

OVERWEIGHT THESIS

- We see scope for Allegro to outperform over the next several years as the recovery remains in an upcycle, with earnings power increasingly supported by incremental secular growth vectors in auto electrification and industrial.
- 35x is in-line with the company's average PE multiple since 2022, but is a premium to auto semi peers and in-line with higher gross margin analog/MCU companies.

Consensus Rating Distribution

Risk Reward Themes

- Electric Vehicles: Positive
- Secular Growth: Positive
- Technology Diffusion: Positive

View descriptions of Risk Rewards Themes [here](#)

BULL CASE	\$70.00	BASE CASE	\$51.00	BEAR CASE	\$43.00
40x CY27 Non-GAAP EPS of \$1.76		35x CY27 Non-GAAP EPS of \$1.45		32x CY27 Non-GAAP EPS of \$1.33	
Growth well ahead of auto semis and analog/MCU, justifying a premium to the average PE multiple since 2022.		Allegro's revenue recovers ahead of the industry given a sharper correction in 2024. Both automotive and industrial end-markets see revenue growth in 2026-27.		More muted recovery as the company faces industry headwinds and increased competition in magnetic sensing.	
-Revenue grows 28.4% in 2027 as Allegro gains share due to technology differentiation.		-Revenue grows 24.9% in 2026 and 18.9% in 2027.		-Revenue grows 13% in 2027 due to industry headwinds and competition.	
-GPM% expands to 54.1% and EPS to \$1.76 in 2027.		-GPM% improves from 51% in 2026 to 52.6% in 2027.		-GPM% increases to 51.7% and EPS to \$1.33 in 2027.	
		-EPS of \$0.93 in 2026 and \$1.45 in 2027.

RISKS TO PT/RATING

RISKS TO UPSIDE

- Share gains with Chinese EV makers & Japanese OEMs as China-for-China strategy develops.
- Increased EV & ADAS penetration drive content growth.
- Data center growth momentum continues amid thin competition.

RISKS TO DOWNSIDE

- Share loss in magnetic sensing to Infineon and Melexis.
- Automotive customers request large pricing concessions.
- Sanken sells down their stake.
- Data center competition emerges.

ON Semiconductor Earnings Preview

The company is scheduled to report after the market close on Monday, August 3rd.

Expectations have moderated following the stock's sell-off along with power semi peers. While the company reiterated 2Q guidance, we still see potential for a beat and raise as the setup is more favorable than it appears given +ve peer read-throughs. **For the print, we are focused on:**

1.) Power market recovery: STMicro's 2Q26 earnings call this week highlighted that SiC revenue grew low-teens year-over-year and mid-30s% quarter-over-quarter in 2Q, supported by a book-to-bill well above 1 and a growing backlog - with mgmt confirming SiC revenues will grow double-digit in 2026 versus 2025 based on existing design wins and backlog. STM also noted confidence in a strong 2026, citing *"on top of ADAS, SiC, sensor, general-purpose micro, clearly, AI infrastructure and low-earth-orbit satellite will be a very strong contributor to the performance of ST in 2026,"* along with improving demand in SiC-based power solutions for data center and continued traction in auto design wins. We do believe the broader power market environment has improved, which could have positive netting effects for 2H if replenishment remains muted or does not materialize as expected.

2.) GM% expansion: As of 4Q25, ON had ~700bps of GM% headwinds as a result of underutilization charges (driven by topline). The company gave guidance toward an uptick in utilization in 1Q - which came in at 77%, up from 68% - and an expected trend toward the mid-70s% for the year with progression weighted toward 2H, with utilization guided flat to up slightly in 2Q. With ON already having announced \$200-\$300mn of impairment charges to be recognized through 1H of this year, an associated \$45-\$50mn depreciation benefit in 2026 hitting the P&L in 2H as inventory bleeds through, pricing actions now offsetting input cost headwinds in 2H, and the July 7 announcement of two fab divestitures expected to generate ~\$35mn in annual cost savings starting in 2027, we do see upside toward the year's GM% with the potential for a 4-handle (vs. MSe and Street at 39.6%), which we would see as a surprise relative to buy-side expectations.

Details on the June quarter: We model revenue of \$1,592mn (up 5.2% q/q and up 8.4% y/y), above the Street at \$1,588mn, and GM/EPS of 39.1%/\$0.72, in-line with the Street at 39.0%/\$0.71. By segment, we model Automotive at \$805mn (up 1.0% q/q and up 9.8% y/y), Industrial at \$442mn (up 6.1% q/q and up 8.9% y/y), and other revenue at \$344mn (up 15.0% q/q and up 4.4% y/y).

September quarter outlook: We model revenue of \$1,676mn (up 5.3% q/q and up 8.1% y/y), above the Street at \$1,670mn, and GM/EPS of 40.4%/\$0.84, in-line with the Street at 40.3%/\$0.83. By segment, we model Automotive at \$862mn (up 7.0% q/q and up 9.4% y/y), Industrial at \$460mn (up 4.0% q/q and up 7.9% y/y), and other revenue at \$354mn (up 3.0% q/q and up 5.0% y/y).

Important Regulatory Disclosures on Subject Companies

As of June 30, 2026, Morgan Stanley beneficially owned 1% or more of a class of common equity securities of the following companies covered in Morgan Stanley Research: Advanced Micro Devices, Aeva Technologies Inc, Allegro Microsystems Inc, Ambarella Inc, Analog Devices Inc., Applied Materials Inc., Arm Holdings plc, Astera Labs Inc, Broadcom Inc., Cadence Design Systems Inc, Cerebras Systems, Infineon Technologies AG, Intel Corporation, IonQ Inc, KLA Corp, Lam Research Corp, Marvell Technology Group Ltd, Microchip Technology Inc., Micron Technology Inc., MKS Inc., NVIDIA Corp., NXP Semiconductor NV, ON Semiconductor Corp., ONTO Innovation Inc, Qorvo Inc, Qualcomm Inc., Renesas Electronics, SanDisk Corporation., Semtech Corp., Silicon Laboratories Inc., Skyworks Solutions Inc, Synopsys Inc., Teradyne Inc, Texas Instruments, Wolfspeed, INC.

Within the last 12 months, Morgan Stanley managed or co-managed a public offering (or 144A offering) of securities of Aeva Technologies Inc, Broadcom Inc., Camtek, Cerebras Systems, GlobalFoundries Inc, Intel Corporation, MKS Inc., Nova Ltd, NVIDIA Corp., NXP Semiconductor NV, ON Semiconductor Corp., ONTO Innovation Inc, Quantinuum, Semtech Corp..

Within the last 12 months, Morgan Stanley has received compensation for investment banking services from Advanced Micro Devices, Aeva Technologies Inc, Allegro Microsystems Inc, Amkor Technology Inc, Analog Devices Inc., Applied Materials Inc., Broadcom Inc., Camtek, Cerebras Systems, Intel Corporation, IonQ Inc, Micron Technology Inc., MKS Inc., Nova Ltd, NVIDIA Corp., NXP Semiconductor NV, ON Semiconductor Corp., Quantinuum, Semtech Corp., Texas Instruments.

In the next 3 months, Morgan Stanley expects to receive or intends to seek compensation for investment banking services from Advanced Micro Devices, Aeva Technologies Inc, Allegro Microsystems Inc, Ambarella Inc, Amkor Technology Inc, Analog Devices Inc., Applied Materials Inc., Arm Holdings plc, Astera Labs Inc, Broadcom Inc., Cadence Design Systems Inc, Camtek, Cerebras Systems, GlobalFoundries Inc, Infineon Technologies AG, Innoscience, Intel Corporation, IonQ Inc, KLA Corp, Lam Research Corp, Marvell Technology Group Ltd, Microchip Technology Inc., Micron Technology Inc., MKS Inc., Navitas Semiconductor Corp, Nova Ltd, NVIDIA Corp., NXP Semiconductor NV, ON Semiconductor Corp., Qualcomm Inc., Quantinuum, Renesas Electronics, SanDisk Corporation., Semtech Corp., Silicon Laboratories Inc., Skyworks Solutions Inc, Synopsys Inc., Teradyne Inc, Texas Instruments, Wolfspeed, INC.

Within the last 12 months, Morgan Stanley has received compensation for products and services other than investment banking services from Advanced Micro Devices, Allegro Microsystems Inc, Ambarella Inc, Amkor Technology Inc, Analog Devices Inc., Applied Materials Inc., Broadcom Inc., Cadence Design Systems Inc, Cerebras Systems, GlobalFoundries Inc, Infineon Technologies AG, Intel Corporation, Marvell Technology Group Ltd, Microchip Technology Inc., Micron Technology Inc., MKS Inc., NVIDIA Corp., NXP Semiconductor NV, ON Semiconductor Corp., Qorvo Inc, Qualcomm Inc., Semtech Corp., Silicon Laboratories Inc., Synopsys Inc., Texas Instruments.

Within the last 12 months, Morgan Stanley has provided or is providing investment banking services to, or has an investment banking client relationship with, the following company: Advanced Micro Devices, Aeva Technologies Inc, Allegro Microsystems Inc, Ambarella Inc, Amkor Technology Inc, Analog Devices Inc., Applied Materials Inc., Arm Holdings plc, Astera Labs Inc, Broadcom Inc., Cadence Design Systems Inc, Camtek, Cerebras Systems, GlobalFoundries Inc, Infineon Technologies AG, Innoscience, Intel Corporation, IonQ Inc, KLA Corp, Lam Research Corp, Marvell Technology Group Ltd, Microchip Technology Inc., Micron Technology Inc., MKS Inc., Navitas Semiconductor Corp, Nova Ltd, NVIDIA Corp., NXP Semiconductor NV, ON Semiconductor Corp., ONTO Innovation Inc, Qualcomm Inc., Quantinuum, Renesas Electronics, SanDisk Corporation., Semtech Corp., Silicon Laboratories Inc., Skyworks Solutions Inc, Synopsys Inc., Teradyne Inc, Texas Instruments, Wolfspeed, INC.

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: Advanced Micro Devices, Allegro Microsystems Inc, Ambarella Inc, Amkor Technology Inc, Analog Devices Inc., Applied Materials Inc., Broadcom Inc., Cadence Design Systems Inc, Cerebras Systems, GlobalFoundries Inc, Infineon Technologies AG, Intel Corporation, IonQ Inc, Marvell Technology Group Ltd, Microchip Technology Inc., Micron Technology Inc., MKS Inc., NVIDIA Corp., NXP Semiconductor NV, ON Semiconductor Corp., Qorvo Inc, Qualcomm Inc., Renesas Electronics, SanDisk Corporation., Semtech Corp., Silicon Laboratories Inc., Synopsys Inc., Texas Instruments, Wolfspeed, INC.

Morgan Stanley & Co. LLC makes a market in the securities of Aeva Technologies Inc, Ambarella Inc.

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of June 30, 2026)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

Stock Rating Category	Coverage Universe		Investment Banking Clients (IBC)			Other Material Investment Services Clients (MISC)	
	Count	% of Total	Count	% of Total IBC	% of Rating Category	Count	% of Total Other MISC
Overweight/Buy	1544	42%	453	49%	29%	757	44%
Equal-weight/Hold	1577	43%	390	42%	25%	769	44%
Not-Rated/Hold	3	0%	1	0%	33%	1	0%
Underweight/Sell	544	15%	89	10%	16%	204	12%
Total	3,668		933			1731	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Analyst Industry Views

Attractive (A): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be attractive vs. the relevant broad market benchmark, as indicated below.

In-Line (I): The analyst expects the performance of his or her industry coverage universe over the next 12-18 months to be in line with the relevant broad market benchmark, as indicated below.

Cautious (C): The analyst views the performance of his or her industry coverage universe over the next 12-18 months with caution vs. the relevant broad market benchmark, as indicated below.

Benchmarks for each region are as follows: North America - S&P 500; Latin America - relevant MSCI country index or MSCI Latin America Index; Europe - MSCI Europe; Japan - TOPIX; Asia - relevant MSCI country index or MSCI sub-regional index or MSCI AC Asia Pacific ex Japan Index.

Important Disclosures for Morgan Stanley Smith Barney LLC Customers

Important disclosures regarding any material conflict of interest that can reasonably be expected to have influenced Morgan Stanley Smith Barney LLC's choice of a third-party research provider or the subject company of a third-party research report, are available on the Morgan Stanley Wealth Management disclosure website at www.morganstanley.com/online/researchdisclosures. For Morgan Stanley specific disclosures, you may refer to <https://www.morganstanley.com/eqr/disclosures/webapp/generalresearch>.

Each Morgan Stanley research report is reviewed and approved on behalf of Morgan Stanley Smith Barney LLC. This review and approval is conducted by the same person who reviews the research report on behalf of Morgan Stanley. This could create a conflict of interest.

Other Important Disclosures

A member of Research who had or could have had access to the research prior to completion owns securities (or related derivatives) in the Micron Technology Inc., NVIDIA Corp.. This person is not a research analyst or a member of research analyst's household.

Morgan Stanley Research policy is to update research reports as and when the Research Analyst and Research Management deem appropriate, based on developments with the issuer, the sector, or the market that may have a material impact on the research views or opinions stated therein. In addition, certain Research publications are intended to be updated on a regular periodic basis (weekly/monthly/quarterly/annual) and will ordinarily be updated with that frequency, unless the Research Analyst and Research Management determine that a different publication schedule is appropriate based on current conditions.

Morgan Stanley is not acting as a municipal advisor and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of Section 975 of the

Dodd-Frank Wall Street Reform and Consumer Protection Act.

Morgan Stanley produces an equity research product called a "Tactical Idea." Views contained in a "Tactical Idea" on a particular stock may be contrary to the recommendations or views expressed in research on the same stock. This may be the result of differing time horizons, methodologies, market events, or other factors. For all research available on a particular stock, please contact your sales representative or go to Matrix at <http://www.morganstanley.com/matrix>.

Morgan Stanley Research is provided to our clients through our proprietary research portal on Matrix and also distributed electronically by Morgan Stanley to clients. Certain, but not all, Morgan Stanley Research products are also made available to clients through third-party vendors or redistributed to clients through alternate electronic means as a convenience. For access to all available Morgan Stanley Research, please contact your sales representative or go to Matrix at <http://www.morganstanley.com/matrix>.

Any access and/or use of Morgan Stanley Research is subject to Morgan Stanley's Terms of Use (<http://www.morganstanley.com/terms.html>). By accessing and/or using Morgan Stanley Research, you are indicating that you have read and agree to be bound by our Terms of Use (<http://www.morganstanley.com/terms.html>). In addition you consent to Morgan Stanley processing your personal data and using cookies in accordance with our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html), including for the purposes of setting your preferences and to collect readership data so that we can deliver better and more personalized service and products to you. To find out more information about how Morgan Stanley processes personal data, how we use cookies and how to reject cookies see our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html). If you do not agree to our Terms of Use and/or if you do not wish to provide your consent to Morgan Stanley processing your personal data or using cookies please do not access our research. Morgan Stanley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Such information is for your reference only. The reader should independently evaluate the investment risks and is solely responsible for their investment decisions. Morgan Stanley Research may not be distributed to the public media or quoted or used by the public media without the express written consent of Morgan Stanley. Any non-customer reader within the scope of Article 7-1 of the Taiwan Stock Exchange Recommendation Regulations accessing and/or receiving Morgan Stanley Research is not permitted to provide Morgan Stanley Research to any third party (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities regarding Morgan Stanley Research which may create or give the appearance of creating a conflict of interest. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation or a solicitation to trade in such securities/instruments. MSTL may not execute transactions for clients in these securities/instruments.
