

Mitsubishi Heavy Industries (7011.T): NVIDIA AI DC collaboration report; strategically positive, maintain Buy

What happened

The Nikkei ([English article](#)) reported at 4:00 pm JST on July 14 that NVIDIA (covered by James Schneider) and Mitsubishi Heavy Industries are partnering on AI data center technology, with MHI considering the introduction of its high-efficiency cooling and air conditioning systems, emergency power supply, and energy management systems at next-generation facilities that NVIDIA positions as “AI factories.” The aim is to suppress the enormous power consumption and heat generation caused by GPUs. Details from the article indicate that at this stage is a technology collaboration and consideration of adoption, with no specific economic terms such as order value, target facilities, or timing of introduction have been disclosed. However, the article reports that MHI intends to grow its DC-related business to sales of several hundred billion yen at an early stage, utilizing M&A, and that this follows the DC collaboration with [SoftBank in March](#). No formal announcement from either company has been identified at this point.

Positive development, but impact likely limited

MHI exhibited at NVIDIA GTC 2026, showcasing its DC-related businesses including on-site power generation with world-leading efficiency, high-efficiency cooling solutions, and next-generation power distribution systems. Regarding business scale, at the time of the 2024 MTBP announcement, MHI indicated that growth areas (hydrogen/ammonia, CCUS, electrification/DC) would total approximately ¥100 bn in FY2026, the final year of the 2024 MTBP. The DC business alone is currently estimated to be in the range of several tens of billions of yen to below ¥100 bn, or less than 1% of companywide sales. That said, the most recent 2024 MTBP progress briefing also indicated a policy of strengthening DC-related businesses (cooling modules, high-security edge DCs) within growth areas. In the US, MHI has been laying the groundwork with the acquisition of Concentric in 2023 and the establishment of a strategic base in Dallas, Texas in May 2025, and the current report is a continuation of this trajectory.

Our view: We expect this could serve as a catalyst for rerating. We maintain our Buy rating

At the current stage, while neither the value nor the timing of introduction having been disclosed, given that the contribution to companywide sales is likely to be less than 1% in any scenario, the near-term earnings impact appears limited. On the other hand, as the investment focus in AI/data centers broadens from GPUs to the

entire infrastructure including power supply and cooling, MHI — a global top-tier player in large GTCCs operating within what is effectively a three-player oligopoly, and one that also has nuclear power as a growth driver in the energy business — has, in our view, been largely overlooked as an AI infrastructure-related stock. We also regard MHI as the key Japanese defense stock, and our impression is that such positive factors are not yet reflected in the company's valuation. We maintain our Buy rating.

Price Target Risks and Methodology - Mitsubishi Heavy Industries (7011.T)

We are Buy rated on Mitsubishi Heavy Industries with a 12-month target price of ¥6,000. We calculate our target price using our FY3/30E estimates and a target EV/EBITDA multiple set at a 40% premium to the Japan Aerospace & Defense subsector average of 14X, deriving a theoretical value that we then discount back to the midpoint of FY3/27E and FY3/28E using a cost of capital of 9%.

Key downside risks include (1) a stronger yen versus our assumptions, (2) lower profitability in the energy business due to a concentration of low-margin projects or large one-time costs, and (3) a decline in overall returns due to setbacks in portfolio reforms.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at <https://www.gs.com/research/hedge.html>.

Not Rated (NR). The investment rating, target price and earnings estimates (where relevant) are removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or in a strategic transaction involving this company, when there are legal, regulatory or policy constraints due to Goldman Sachs' involvement in a transaction, and in certain other circumstances. **Early-Stage Biotech (ES).** An investment rating and a target price are not assigned pursuant to Goldman Sachs policy when this company has neither a drug, treatment or medical device that has passed a Phase II clinical trial nor a license to distribute a post-Phase II drug, treatment or medical device. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining an investment rating or target price. The previous investment rating and target price, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company.
